ing more pain than what intervenes before the appearance of the desired thing, or not producing that pain which is the object of strong aversion.

Reply (by the Mīmāmsaka): Not so; for conduciveness to what is desirable and feasibility through one's effort cannot be apprehended together, since being an attainable end and being the means are contradictory. Only that which has not been accomplished is attainable, and only what is already accomplished can be the means (to what is desirable). A thing cannot be known by the same person to be both accomplished and unaccomplished at the same time. Therefore the two are apprehended at different times.

Objection (by the logician): Not so; since for the sake of simplicity the cause (of inclination) is the notion of feasibility through one's effort, combined with that of being a means to what is desirable, without producing highly undesirable consequences. And there is no contradiction between the same thing being an end and a means; for there can be no contradiction in its being an end or a means at different times, and we can simultaneously have the notion of a thing being an end and a means. The new school (of Mīmāmsakas), however, maintains that the notion, 'This is feasible through my effort,' is not a cause of inclination, since such knowledge is impossible with regard to something that is yet to come.<sup>2</sup> But when a man

<sup>&</sup>lt;sup>1</sup> Such as the trouble of lighting a fire and getting together the accessories of cooking.

<sup>&</sup>lt;sup>2</sup> Because in such a case, if connection due to common features is not admitted, perception is impossible. And because there is no knowledge of the subject, e. g. a jar, inference is impossible.

### **PREFACE**

The Bhāṣā-pariccheda with its commentary, the Siddhānta-muktāvalī, by the same author, Viśvanātha Nyāya-pañcānana Bhaṭṭācārya, is a manual on the Nyāya-Vaiśeṣika philosophy which is extensively read throughout India by all who want to get a fair knowledge of the subject within a short compass. Though it tended for beginners, it is a pretty difficult book, the chief reason for which is its extreme terseness. In 1350 Dr. E. Röer published an English edition of the Bhāṣā-pariccheda, with extracts from the Muktāvalī, which is long out of print. An English rendering of the work with the Muktāvalī was therefore overdue.

Some consider books on Navya-Nyāya untranslatable into English because of the bewildering intricacy of their language. However true of the more advanced works, it may not be true of a treatise like this. For those who are not well versed in Sanskrit, an English version of it is sure to be of great help. Really this is a task that should have been undertaken by scholars. But since no one has so far done it, I have ventured to make an attempt—with what success it is left to the readers to judge. Students of Nyāya, however, should alw 's remember that, no matter how good a translation is, they must be ready to do hard thinking for a proper understanding of the subject.

In the preparation of this book the gloss *Dinakarī* and its scholium *Rāmarudrī* have of course been of inestimable aid. I have also received much help from Paņḍita Upendracandra Tarkācārya, Kāvya-Vyākaraṇa-Purāṇa-Sāṇkhya-Vedānta-Tarka-Saḍdarśana-tīrtha, of

\*\* Company of at the Delur Math, with whom I studied to Dr. Satkari Tem deeply indebted to Dr. Satkari Delur Math, In D. Lecturer in Sanskrit, Pāli and I the plant in University of Calcutta, who has the translative added a few notes and the latery Introduction. Some other friends to be into in different ways. I have also got the later of the Bengali version of the book that the Repartmeandra Sastri, M.A.

### INTRODUCTION

The Bhāṣāpariccheda together with the author's own gloss called the Siddhantamuktavali was written by Viśvanātha Nyāyapañcānana, who flourished till the early part of the seventeenth century A.D. at Navadvipa. Of all the manuals of a syncretic character on the Nyāya-Vaišesika school, the present work is the most popular and most extensively studied in India. The popularity of the work is not due to simplicity or brevity, but rather to its comprehensive treatment of most of the important topics and problems that exercised the minds of the exponents of the Navya-Nyaya school for several centuries. It is admittedly a difficult book, being written in the later style of Navya-Nyāya terminology, which was developed by the school of Nadiā logicians. What constitutes its chief merit and title to the celebrity it enjoys is the fact that it admirably sums up the latest results of scholastic lucubrations of this school. The author flourished after Raghunātha Siromaņi, Mathurānātha, and Jagadiša, and he has naturally utilised these masters. A study of this work is thus a sure propadeutic to advanced study and makes the student fairly well-posted in Nacya-Nyāya dialectics.

Visvanātha follows the plan of Prasastapāda in his treatment of the Vaiseņika categories and their relations, although his exposition embodies new contributions. In the discussion of the necessity and utility of invocation of divine help called Mangallearana, he follows in the footsteps of Gangesa Uplidhyaya, who claborately discusses the question at the very beginning of his magnum ofpur, the Tattorcintāmani. Although

description may appear to be a jejune discourse of a coholastic survival, it does not lack philosophical more), intermed as it serves to bring out the implication of the law of causation by explaining the anomalies of the law of causation by explaining the anomalies of the law of causation by explaining the anomalies of the law of factors not patent to observation. It emerges to make the discourse that there is no play of chance, and the expenses of events is rigorously governed by the law of hours not brook any lapse or exception. The expenses although extremely brief, stimulates to convert of the student for fuller knowledge, which are refer to a disfield by a study of the Nyāyakusum-coli, feeling vis Isvarānumāna and advanced works of the reduced.

The relatition of lakti (energy) and sādršya " military advocated as separate categories by the The First is effective, although the advanced student 12 has good to the sources will feel that the treatment I meeting. But it should not be forgotten that the book v. M. f. r becomers, and the student must be thankfirst the author has raised all the important topics or tower in the crystollized results. We may refer to the strate definition of substance by way of illustrathe A chalve of the definitions propounded by the and the state of this school will show the evoluthe efficient that took place in the course of several of the firm time of Profastapada, Sridhara, Victoria of Villable down to Visvanatha. Prasastathe statute of substance as the substratum of And the Bendalty Sn Born has been severely attacked The definition fails to apply the matter who had devoid of a quality at the moment of its origination. The second difficulty is that we cannot distinguish a quality from a substance in the light of this definition. If the logical predication of quality is the criterion of the subject being a substance, then this criterion will apply to qualities also. Thus, in the proposition 'Qualities are twenty-four,' the number of twenty-four, a quality, is predicated of 'quality,' and the definition would make substance of it. Srīvallabhācārya, the author of the Nyāyalīlāvatī, a work of the highest authority on Vaiscsika philosophy, which has been commented upon by Vardhamana, Sankara Miśra and Raghunātha Siromani, to name only the prominent masters, has propounded an amendment of the definition in the following terms: 'Substance as the substratum of quality is to be understood as that which is never the substratum of the absolute nonexistence of quality as such.' It does not fail to include the substance at the first moment of its origin, as, though devoid of quality, the non-existence of quality in it is not absolute. But this amendment too has been roughly handled by Citsukha and has been shown to extend to unwarranted cases, e. g., the non-existence itself, as it is not the substratum of this non-existence. since a thing cannot function as its own substratum. Moreover, the charge of unwarranted extension to qualities is not rebutted, for number is predicable of quality, as shown above. The explanation of this predication on the basis of co-existence of the subject and the predicate in the same sub-tratum is an argument of despair. The subject and the predicate are not supposed to stand in the relation of co-existence in any other case. The predicate is affirmed of the subject

. A le frank to be possible on the basis of identity No reason is assigned for departure programmed mode of relationship in the prothe state of the state twenty-four in number' save and the hyp thesis that quality cannot be the subthe set of the quality. But this is an assumption the restaures to be established by proof. The nature as to be determined in consonance with experiand logically deterand the line itself into a judgment. A judgment that of polyments is identical, there is no ground the transfer of an unwonted relationship in and the tracky ante theory. So the explanation of \* The trade to relation as not one of denotational and as the state of the state o Section optible. Moreover, "the non-existence of that is an orthogous expression. It may mean the other of one quality or of all qualities The non existence of one particular the top-existence of all the qualities is the off off and every substance. So the definito the state of main and would not apply to any sub-

is described in view all these difficulties and so is faithful which avoids these pitfalls. He is the described definition of substance as the continuous of the substance-universal factors, a mountain, a liquid and a gaseous

substance, which possess such a bewildering variation of physical qualities, is not a matter of undisputed perception. It can be helpful provided an independent proof of substancehood is offered. Viśvanātha offers this proof, not by appeal to experience, which is noncomittal, but by working out the implication of causality. Although physical qualities like colour and sound are not universally predicable, conjunction or disjunction at any rate is predicable of all substances. A substance, whether a product or an eternal verity, must come into the relation of conjunction with, or disjunction from, another substance. Conjunction and disjunction, being events in time, must have a substratum in which they can inhere as their cause and support. This is called inherent cause to distinguish it from other types of causes, the difference of types of causes being determined by the relation it bears to the effects concerned.

It is the postulate of Nyāya-Vaišeṣika metaphysic that a cause cannot be a simple entity. In point of fact the Naiyāyika does not believe in the existence of uncharacterised simples. The very logical necessity of a real being possessed of a distinctive identity, the forfeiture of which will make it cease to be real, presupposes that this self-identity must have a definitive qualitative content in it. This definitive character must be uniform in all reals which fall into a class and behave in the same way.

To come to our immediate problem, the nature of an inherent cause of conjunction or disjunction must have a determinant content, and this determinant is nothing but the substance-universal, which is present in all inherent causes of conjunction. The rule is that all the principles which is of smaller or of wider extension to contact be a determinant (avacchedaka), and as the principle qualities are not co-extensive with the principle (satisfy) is of wider extension, the determinant of the substance-universal alone (dravyatva). The their being an independent proof of it, the principle of substance by means of substance-universal to the conjunctions advanced against the property of the conjunctions advanced against the property of the conjunctions do not lie against it.

We have purposely selected a controversial prob-I to not with a view to pronouncing on the merits of the station proposed, but for the purpose of giving " et postive student of Navya-Nyāya an insight with the methodology. The merits of Navya-Nyāya the althous pre-eminently lie in their method of it has all concepts and their formulation in exact the law. The analysis is carried to its utmost land and the dispetion of the implications has necesthe creation of a terminology which is extremely and the infrequently bewildering. Language have a street had to its utmost capacity, and even an To the complete analyzed in all its implications and control 1 with maticulous precision, has required a The unusual sound of the sesqui-; to ; in which the Naiyāyihas literally by the recophyte from the study of Properties. I do not think translation into with the following will remove the difficulties, as they of the my locality, but legical in character. To the thirty is a hard tack. But once the intricacies of the terminology are mastered, the reward will be an intellectual satisfaction and a habit of close thinking, so essential for the successful comprehension of any problem, theoretical or practical.

We had an occasion to allude to the Naiyūyika's conception of reals as complex. Nothing existent has a simple constitution. The make-up of all reals that have independent being is a combination of a that and a what. Accordingly the content of all knowledge worth the name is a complex of an adjective (determination) and a substantive, called prakara and viscsya respectively. A clear analysis of a cognition cannot but take note of these two features and also the relation which binds them together. The point at issue can be brought home if we analyse the concept even of an ordinary object, say, a jar-the favourite example of the Naiyāyika. The jar is a thing, a real, a fact. But that is not the whole thing about it. It is the commonest character of all reals. What makes the jar what it is and positively constitutes its individuality and negatively differentiates it from other reals is the adjectival part of the jar, which is its very essence. No conception of a jar is possible which does not sieze hold of this adjectival factor as its content. The adjective and the substantive alone do not exhaust the individuality of an object, but there is a tertium quid, which cements the two elements into one whole. The cementing bond is the relation and is thus a component factor of the individuality of a real. To distinguish it from the adjectival element, which is also the determinant of individuality, it is called the determinant qua relation. A concept, which is the minimum unit of the life, is thus capable of being defined as a cognient which takes note of a relation. A cognition which it is not apprehend a relation is not psychologically In other words, a cognition felt or fit to be felt to be determinate. The possibility of an train to comition, however, is not denied, but it to the last a matter of logical necessity. A deterthat in while is a judgment, implicit or explicit, the relation between the ty tival and the sub-tantival element. But judgment per directly if there is a previous knowledge of the in that factor, which is brought into relation with the off tentive in a judgment. Now the previous from the of the adjective, which is the precondition of pid ment, cannot be judgmental in character. It \* 11 inditerminate. If it were determinate, it and it require another cognition of the adjective as its that also would require another previous which if each of the preceding cognitions were to print in character. So there must be a simple the specific apprehension somewhere at the outset, The state of a vicious infinite series.

The property all knowledge fit to be perceived a line at it this. The knowledge that a knowledge is always introspective in form, it is place is always introspective in form, it is place in always introspective in form, it is part or 'I have knowledge of the without reference to an object is without reference to an object is the primary indement as an impossibility. On the primary indement, called Visiglative in the complex indement, called Visiglative in the primary indement. In

the first place knowledge is predicated of the subject as something which has happened to him. In the second place knowledge is qualified by its object 'jar.' In the third place the jar is qualified by jarness—the jar-universal (ghatatva). Now the first judgment presupposes the second and the second the third. The content of the second judgment is the proposition 'The jar is,' and this enters into the content of the judgment 'I know the jar.' The judgment 'The jar is,' is made possible only if there is knowledge of jarness, as articulate knowledge of a thing unqualified is impossible. And the knowledge of 'jarness' as the qualifying adjective of jar, being the precondition of the judgment 'The jar is,' has been shown to be indeterminate on pain of a regressus in infinitum, and the contents of indeterminate knowledge are undetermined.

The Naiyāyika does not believe in the possibility of a felt knowledge which has for its content an undetermined object. The object, whatever it is, has a character qualifying it (prakāra) and must be felt as such. It may be asked that if the knowledge of an object necessarily involves the knowledge of a determination (prakāra), is the determination known to be determined by a further determination? The answer is that a determination felt as an element in the object is undetermined, but when independently conceived as expressed by a term, it must be felt as determined by a qualifying adjective. Thus, jarness felt as an element in the concept of jar is felt by itself without a further determination, but understood as the meaning of the word 'jarness' independently of its incidence, it is felt

BHASA-PARICCHEDA the farness-ness, which means the The determination in this in in understood either as a universal (jāti) a mirelian (akhandopādhi). n that all knowledge of which one to the determinate according to the and makerminate knowledge is only a But Prabhākara, the celebrated who is the accredited founder of his own and whose astounding originality philosfort charie from Gangesa, who wrote his to refute his views in particular, holds ... the second pudgmental in character and is The like with jur. His argument is that the articulated judgment 'I the present in full, that is to say, the the sub-tantive 'jar' and their there are present to consciousness, there The thry should not be cognised together. of indeterminate cognition as the Than de knowledge is absolutely un-Transminate cognition is but two moments after the sensethe interval of a moment or The contention that the ear the condition is the condition sine qua to substance. the state of the s The jar is not here, the state of the s the quality of being a negation (abhāvatva) and by 'the jar,' its counterpositive. Negation without reference to its counterpositive is not intelligible, and as the counterpositive is neither a universal nor an unanalysable characteristic, it must also be known as determined. But as the previous knowledge of all these determinations is not at hand and is on the contrary detrimental to a negative judgment, it must be admitted that they are comprehended together in a complex judgment called Višistavaišistya-jñāna. Again divine intuition being uncaused is not conditioned by a previous knowledge. So there is no reason for holding determinate knowledge to be caused by a previous knowledge.

To this contention the Naiyāyika replies that the opponent makes undue extension of an exceptional case and makes an exception the universal rule. Though the objective conditions of complex judgment may be present ab initio, they do not lead to a judgment all at once, if the knowledge of the determination or the determinant of the determination is not present in the mind of the subject. Thus in a case where redness, a garment (the substratum of redness), a jar and substancehood are apprehended together without reference to the relations governing them respectively, the resulting judgment could be 'I know the red jar,' which is never the case. This shows that knowledge of the relation, that is to say, an independent judgment, e. g., 'the jar is red,' is invariably the condition precedent of a complex judgment. Mereover, a jor may be cognised either as a jor (that is, qualified by jurhood) or as a thing possessed of a universit (illiman), as both these determinations are The result will be either of the police att, 'There is a jar' or 'There is a thing of a universal' and not promiscuous. There is a reason for this variation in result, and it is a reason for this variation in result, and it is anything else than this that the knowledge of a termination in question is the decisive condition of the judgment that will follow, whether simple the first or complex trigistavaisistyajnāna).

Who do oursing on knowledge of reals we had n to observe that all entities are felt as deterthe the come characteristic except the universal the unanalysable characteristic (akhand-2.22 felt as elements in reals. In other words a transfirm is not further determined, and the and a sample. If a determination were further Is true I by another determination, there would be and it it, and the result would be a deadlock. A . I a m v be raised in this connexion. A deterand the a first, but why should it be a upādhi also If I the anti- Why should not jati alone serve mantion in all cases? The answer is as \* Angella hes got all the incidents of a universal with the state of functions as a synthesising Let the form r lacks one or the other of the That is of the maversal and so stands aloof in Brudes there may be an impedi-The list of impediments and the stanza xi for the list. Of these, cross-division and the stanza of the second to require an elucidation, owing to a possible misconception. We take up the latter first. The problem arises in this way: The different universals are numerically and constitutionally distinct, and still they are called by a common name, viz., universal, and are comprehended by a common concept. Thus in relation to one another they behave like individual members of a class, and this would make the postulation of a wider universal comprising all the universals in its scope a logical necessity, as is the case with individual cows or horses. But this cannot be done. The higher universal in question may serve to synthesise all the universals under one class, but being itself a universal like those it synthesises, will require a still higher universal to synthesise itself with the other universals under a common group. But the same difficulty will arise with regard to the second higher universal also. The result will be a vicious regressus in infinitum, and this forbids us to posit a higher universal over and above the recognised universals. If there be a necessity for a synthesising principle, it will be a upādhi and not a tati.

As regards cross-division there is a sharp difference of opinion about its invalidating capacity, as it does not involve an absurdity, which is patent in other cases. The Vedāntist does not regard it as a bar, and so also a section of the Naiyāyikas. It is argued that when the synthetic operation is present and there does not arise an absurdity, there is no reason for denying that the attributes in question are universals. We can distinguish three types of attributes in so far as their mutual relationship varies. Firstly, attributes which

\* \* ..

er, mutually exclusive and never found to coincide, and horsehood. Secondly, between to a core is found to have independent incidence while ther is not, e.g., jarhood and substancehood. Wirdly, some attributes which are partially exclusive r i partially coincident, e.g., the attributes of being er elim it (bhātatva) and of having limited dimension (martatia). The first and second types are regarded . miverals. The third type of attributes is subject to contraversy. The Naiyāyika is of opinion that if to universals are to coincide, they must be related littler and lower, that is to say, the extension of the must be included in that of the other. The efficient orgues that when independent incidence is t in let I upon as the condition of universals on the article of cowhood and horsehood, and partial exclu-The by one of the other is no bar against their being the berief in the second type of attributes, there is no the recommendation why there should be opposition with rorl to the third type on the ground of partial with the the case another. Udayana contends that if the northelity exclusive universals were to coincide, . I and hersehood could also be supposed to r of the and this would make the distinction of a cow was a larger libbs. But the opponent points out the state of the cardusive universals can never the for equinst two partially exclusive to be yellown by Udayana is not on all

il the first is difference of opinion with regard

rest of the impediments. When an impediment is present the synthesising attribute is called 'upādhi.' Upādhi again admits of twofold division according as it is susceptible of analysis or not. Thus etherhood (ākāśatva) is a upādhi. But if etherhood can be equated with the character of being the inherent cause of sound (śabda-samavāyi-kāraṇatā), which is the definition of ether, it will be called an analysable (sakhaṇḍa) upādhi. But the concepts of adjectivehood and substantivehood, etc., are not analysable into simpler terms, and hence they are called akhaṇḍa (unanalysable) upādhis. The latter felt as determinations in reals are not further determined.

We have discussed only a few problems and have avoided a vast mass of important topics. We do not pretend to be competent, nor is it the place here, to discourse on them. The translation of works of Navva-Nyāya literature into a foreign language is almost an impossible task, and if possible at all, will require Herculcan labour. The subtle nuances of the terminological expressions refuse to be rendered into another language. The present translation is a new enterprise, and the author of it. Swāmī Mādhavānanda, has achieved considerable success. The translation is accurate and in most places extremely happy. His task has been uphill, because the Muktavali is full of discussions in which the terminology of the New School has been freely used. The special charm of the translation is the studied avoidance of all technicalities of Western philosophy, which makes it intelligible even to a person who is not a student of philosophy. But a translation, however successful, cannot altogether excit the difficulties of the original, and so the present translation will require as close attention as the original, it may rate in the chapter on inference. The footart a although brief, are felicitous and will help the and estanding of the text. It will particularly help the the studies the book along with the original, is translation into another language serves to a great event the purpose of a commentary. The credit of being the pioneer-translator into English in the field of Natio-Nyāya will go to Swāmī Mādhavānanda, hagish translation of Sankara's Bhāṣya on the Levelitansaha Upanisad and other philosophical classic lass already made his name familiar to the emiliate of Indian philosophy and religion. I can uni definely aver that his English rendering will ent : I the circle of readers of this important work, and the val by instrumental in stimulating the interest of or in or philosophy in Navya-Nyāya-a subject the harmonical a scaled book to many and a with the to that a few.

The Processon of considerable data about his and family history. Viśvanātha has and family history. Viśvanātha has the date of his composition of the Nyāyasūtra in 1556 of the Saka era, which is equipled to the This work was written at the fagilia of the Twan Kaśinātha Vidyānivāsa, who is the Twan Kaśinātha Vidyānivāsa who is the Twan Kaśinātha Vidyānivāsa is the Siromani of immortal fame. The

father of Vidyāvācaspati and Sārvabhauma was Maheśvara Viśārada, celebrated for his scholarship and piety, whose father Narahari of Banerjee clan settled at Navadvipa in the fourteenth century A. D. Viśvanätha also wrote another work called Maiisatattvaviveka-an interesting treatise on Smrti. The work was written as the result of a controversy with the panditas of Mahārāstra with a view to vindicating the custom of meat-eating among the Brahmins of Northern India. It has been published by the Saraswatibhavana of Benares. The author shows vehemence in his advocacy of the custom, which prevails particularly in Bengal, and ridicules the South Indian panditas, who deprecate meat-cating, as the followers of the Buddhist tenets. For the details about the genealogy and the literary achievements of the ancestors of our author we refer the reader to the Introduction of the Nyāyaparicaya, in Bengali, by M. M. Phanibhūsana Tarkavägisa, whom we have the privilege and honour to have as our esteemed colleague in the University of Calcutta.

with the help of a body, it is not caused by an agent, and hence the reason is counterbalanced<sup>1</sup>; for it has no corroborative argument. Whereas in my case the relation<sup>2</sup> of cause and effect subsisting between an argument. One should also remember in this connection such Vedic texts as, 'One shining Being generating theaven and earth' (Kg-Veda X. Ixxxi. 3, etc.), and heaven and earth' (Kg-Veda X. Ixxxi. 3, etc.), and 'The creator of the universe, the protector of the universe ' (Mand. Up. I. i. 1).

t The original proposition was: 'The earth has an agent, for it is produced.' This is rebutted by the counterproposition, 'The earth has no agent, for it is not produced with the help of a body.'

Fivery piece of note is invariably comested with a living being as its agent. This universally accepted causal relation is preciperative that the universe has a heing excutor, and this is God.

# THE CATEGORIES

# इत्यं गुणलाया कर्म सामान्यं साविशेषकम् । तम्बादस्तयाऽमादः पदार्थाः सप्त कीर्तिताः॥ २॥

2 The categories are stated to be seven, viz. quality, likewise action, generic attri-Late, to sether with ultimate difference, inherence, as the non-existence.

The categories, are being divided: The categories, If the life very mention of the seventh item as nonthat the other six are positive entities; they have no: been separately described as such. are in accord with the assumptions in the Commentary.2 Therefore the the commence of the prima ther power, similarity and so forth treated as additional categories, as being

## BILIGI-PARICCHEDA

क्षित्रवेद्योमकालदिग्देहिनो **मनः।** द्रश्याच्यय गुणा न्त्रपं रस्तो गन्धस्ततः परम् ॥ ३॥ लकी संस्था परिनितिः पृथक्तं च ततः परम् । संयोग⊠ विभागश्च परत्वं चापरत्वकम् ॥ ४॥ ादिः मुरां दुःखिमच्छा द्वेयो यक्षो गुरुत्वकम्। देवत्त्रं जेउसंस्तारावदृष्टं ग्रन्द एव च॥ ४॥

Earth, water, fire, air, ether, time, soul and mind are the substances. the qualities: Colour, taste, then smell, number, dimension, then separateness, Conjunction and disjunction, distance and nearin which, weight, liquidity, oiliness, tendency, merit and demerit) and sound. The about are being divided: Earth, etc. water, fire, air, ether, time, space,

the said mind there are the nine substances. What is the proof of substancehood Ferception is no observed in

The state of the second of the section is dead to the section is dea the first than the part them, that there is the form.

Reply: Not so. It is established as the determinant (avacchedaka) of the inherent causality (sama-väyi-käraņatā)<sup>1</sup> of an effect, or as the determinant of the inherent causality of conjunction or disjunction.

Objection: Why has not darkness been mentioned as the tenth substance? It is apprehended by perception, and it is a substance, since it has colour and action. Being devoid of smell, it is not earth; being blue in colour, it is not water and the rest; and the eye unaided by light is the cause of its perception.

Reply: No. Since we can account for it as the absence of the required light, it is unjustifiable to consider it an additional substance. As for our perception of its possessing action also is just an illusion. Our sion, being conditional upon the removal of light. Moreover, if darkness be taken as an additional substance, it would involve the assumption of its possessing an infinite number of parts and so forth, which is an infinite number of parts and so forth, which is an infinite number of parts and so forth, which is later on.

The qualities are being divided: Now the qualities, These twenty-four qualities have been pointed out

I The material out of or in which something is preduced is its inherent cause. That which makes an inherent cause just what it is, is its determinant. Here subtrance his other insections in presupposes a substance as that. Since an effect necessarily presupposes a substance its inherent cause, substancehood is a fact. Similarly c my pucche or disjunction takes place in substances at its disjunction takes place in substances at its distinction takes about the substances at its distinction.

s In section for other and districtly in

by Kar The explicitly as also by the word 'and.' How the practic attribute qualityhood can be proved, will be tot. I later can?

#### उत्होत्रमं ततोऽपक्षेपणमाकुञ्चनं तथा । प्रसारणं च गमनं कर्माण्येतानि पञ्च च ॥ ६ ॥

Throwing up and throwing down, contraction and expansion, and motion—these are the five actions.

The nations are being divided: Throwing up, etc. in some attribute actionhood is proved by perceptive. So with regard to the generic attributes such as the and relying throwing up (utksepanatva).

#### ग्रमणं रेचनं स्यन्दनोर्ध्वज्ञलनमेव च । तिर्यन्पमनमस्यत्र गमनादेव लभ्यते ॥ ७ ॥

7. Reaming, flowing, dripping, blazing upmatch and algain motion are all understood here from the word 'motion.'

It may be objected why actions like roaming etc., it is in that from the above, are not mentioned to be all will use. This is being answered: Roam-

extension than some others, they are inferior. That difference which is ultimate and belongs to the eternal substances is called ultimate differ-

ence.
As substancehood occupies a wider area than earthhood etc., it is inclusive (vyāpaka), and therefore
superior: while occupying a parrower area than exist-

hood etc., it is inclusive  $(vy\bar{a}paka)$ , and therefore superior; while occupying a narrower area than existence, it is a concomitant  $(vy\bar{a}bya)$ , and therefore inferior. So, being possessed of both attributes, the two are not incompatible.

Ultimate difference is being described: That difference, etc. Ultimate, that is, occurring at the end or extreme limit; in other words, beyond which there is no further differentiation. All things such as a jar down to the dyad are differentiated from one another by differentiates in their parts; it is ultimate difference that differentiates the atoms from one another. This, however, is differentiated by itself. Hence it does not require any other differentiating medium. This is the

#### ः तत्रासद्यं जनकं द्वितीयमाभ्यां परं तृती्यं स्यात्॥ १५॥

18. An inherent (samavāyin) cause is that, inhering in which an effect is produced. The cause which is connected with that is the second; what is other than these is the third.

The cause which is connected with that is the month, that is, non-inherent cause. Although under this definition, the conjunction of the shuttle and thread may be? the non-inherent cause of cloth, likewise impalse etc.? may be the non-inherent cause of impact cto., and knowledge etc.? may also be such a cause of close etc., yet this can be avoided by adding to the demantion of the non-inherent cause of a cloth the qualifying phrase, other than the conjunction of the hattle and thread. The conjunction of the shuttle and thread, however, is certainly a non-inherent cause of the conjunction of the shuttle and cloth. In like the dater, impulse (vega) etc. are certainly the non-interest cause of (another) impulse, movement, etc.

The real most ing indiciolably connected with. The

<sup>\*</sup>A consistent organism and s in the thread, which is with a constant of the cloth. But it is not; for with its with its to the stronged. So with the other to the stronged by qualifying the constant of the stronged by qualifying

the switches.

<sup>\* 1900 - 1900 - 1900 - 1800</sup> 

the second and all the

The Control of the particular ways

Hence the definition of the non-inherent cause of those particular effects should be qualified by the words, 'other than such and such things.' The special qualities of the soul, 'however, never become the non-inherent cause of anything.<sup>2</sup> Hence the general definition of that cause must be qualified so as to exclude them.

inherent cause) sometimes (directly) through the relanords, (the non-inherent cause is connected with the object, viz. the two halves, as the jar is. In other ing to it; and this colour is connected with the same the jar is the inherent cause of the colour etc. belongnon-inherent cause of the colour of the jar. Here second: The colour of the two halves of a jar is the halves, as the effect, the jar, is. An instance of the halves, is connected with the same object, viz. the two so on. Here the cause, viz. the conjunction of the two halves of a jar is the non-inherent cause of the jar, and ample of the first is this: The conjunction of the two nected with the same object as the cause is. An exwith the same object as the effect is, or by being couthe inherent cause in two ways-by being connected Now the non-inherent cause may be connected with

#### THE SUBSTANCES

#### EARTH

#### तत्र श्नितिर्गन्यहेतुर्गानारूपवती मता।

#### पड़िथस्तु रसस्तव, गन्धस्तु द्विविधो मतः॥ ३४॥

35. Of these, earth is the cause of smell and is considered to be multi-coloured. There are (all the) six kinds of taste in it (only), and it is considered to have two kinds of smell.

Having described the common features and features that are lacking in common, the text now takes up earth and the other substances one by one in the words: the e, earth, etc. The cause of smell-That is to say, the inherent cause of smell. Although its merely being in and of smell should be the definition, yet, in order to furnish a proof for the generic attribute earthhood, if it is takinged as the cause (of smell). To explain: Buthleyd is established as the determinant of the millionit causality of smell. Otherwise every smell is a transfer produced by chance. It cannot be at 13 that since stones etc. have no smell, (the definito a of earth 23 edocumess does not extend to them; that the two releasts (can be inferred to) exist. The to be the fifth a of small can as well be explained by the that that it is not strong enough. Otherwise how can half to track. I in their ashes? Since the ashes are to the first destruction of the stones, it is proved the first of the effect of the material forming the

A contract of the fish

stones; for we have the rule (vyāpti) that a thing that is produced by the destruction of another is the effect of the material forming the latter. This is observed in the case of a rag that is produced by the destruction (tearing off) of an entire piece. Thus, since the atoms of stone are earth, the stone that is made up of them is also earth. That being the case, there is nothing to disprove its having smell.

definition is applicable to all cases. to the Aydya system jars etc. can also have that, the destruction and change of colour, and since according to the Vaisesika system, atoms of earth undergo things subject to destruction of colour. Since according attributes concomitant with substancehood that abide in having two colours; or the possession of those generic comitant with substancehood that abide in things? it means the possession of those generic attributes conin which different colours have not been produced; for be urged that the definition does not apply to the earth different colours through the action of heat. It cannot earth, however, a single entity (dharmin)! may have etc., for they have only whiteness. In the domain of white and blue exist in earth alone, and not in water Multi-coloured: Colours of various species such as

Six kinds, etc.—The six kinds of taste, sweet and the rest, that we know of abide in earth alone. In mater there is only the sweet taste. Here also,\* as better, the definition\* should be understood to mean

<sup>\*</sup> High god have cally the colour Mence they are excluded.

e pir the best-white of we kinds it mits.

the presession of those generic attributes concomitant with substancehood that abide in things having two kinds of taste. Two kinds of smell: This is merely a statement of fact, not that the possession of two kinds of smell constitutes a definition (of earthhood); for in that case the mention of two kinds would be redundant. These two kinds should be understood as good and bad small.

#### स्पर्गस्तस्यास्तु विजेयो हानुष्णाशीतपाकजः । नित्यानित्या च सा द्वेघा, नित्या स्यादणुलक्षणा ॥ ३ई ॥

30. Its touch should be understood as neither hot nor cold and generated by the action of fire. It is of two kinds—eternal and transitory. That in the form of an atom is eternal.

It:—ci earth. Air also possesses touch that is the iter hot nor cold. Hence the words: Generated by the action of fire.\(^1\) Thus the above statement is for ustiming that the touch of earth is neither hot nor cold. Strictly speaking, its definition is that it possesses that that is generated by the action of heat—the rest had redundant. Although touch that is generated by the colon of heat is absent in cloth etc., yet the definition of heat is absent in cloth etc., yet the definition of which with substancehood that abide in this colon animal with substancehood that abide in this colonical touch that is generated by the action of the at-

It is, essentially, i. e. earth, is of two kinds, that is is, i.e., derid and transitory. That, i. e. earth, in the infinite of a dear is elemal.

William to them of the atoms of water, fire and air.

### । किगीरफ्कणवि, सेवावयविता हु। ।। शा च शिया भवेड्डिमिड्डियं विषयस्तया ।। ३७ ॥

37. What is other than that is transitory. This alone is possessed of parts. And it has these forms and objects

three forms—bodies, organ and objects.
What is other than that, i. e. earth which is

lyhat is other than that, i. e. earth which is different from the atom, in other words, everything beginning with the dyad, is transitory. This, i. e. the transitory earth, alone is possessed of parts.

Objection (by the Buddhist): What is the proof

of the existence of a whole, as things can be explained by an assemblage of atoms? It cannot be urged that since atoms are beyond the senses, jars etc. will not be perceptible. Because, although a single atom is beyond a single hair may be invisible from a distance, but a collection of them is visible. Nor can it be urged that collection of them is visible. Nor can it be urged that will be accounted for just like the notion of a single big jar will be inexplicable; it will be accounted for just like the notion of a single great heap of paddy.

Reply: Not so, Since an atom is beyond the tensers, a collection of them must also be imperceptible. As let the hair at a distance, it is not beyond the senses; for near at hand, the same hair is perceptible. It commot be urged that since the visible collection of alottes is produced, at the moment, there is no contradiction as regards its perceptibility; for an invisible thing cannot be the material of a visible thing. Otherwise the characteristic of a stream of vapour etc. may somewhere the characteristic of vapour etc. may somewhere the characteristic of the above them as treatment of vapour etc. may somewhere the characteristic of the characterist

e eg Segresemeg gjæðine egyirghrin i ra menmer e gærin egyi jinejeigja ergjerhrin i ra menmer times be visible. Nor can it be questioned how, in extremely heated oil etc., visible fire is produced from an invisible stream of fire; for we can well understand that the visible fire has been produced from the visible particles of fire within the oil etc. Nor can it be questimed how the visible triad is produced from the invisible dvad; for we do not maintain the visibility or otherwise of anything by nature, but that a thing is visible only when the totality of causes such as medium dimension and manifested colour is present, and in the all since of that it is invisible. So the triad is visible on account of its medium dimension; but since the dyad ate lack it, they are not visible. According to you also, it is not possible (to perceive atoms); for atoms have no medium dimension. Thus the existence of a while is proved, and since the origin and destruction of while are facts of perception, they are transitory. It they have an endless series of parts, Mt. Meru and a mustard seed would be equal.1 Hence the If e is of division must be stated to stop somewhere. Non if that limit where the process stops be transitory. a would mean that an effect2 may be produced without an inherent cause. Therefore it must be eternal. Just as has gradations of medium dimension have their limit

Carrier of the Santarian

directly or indirectly. No effect is produced that is not related to a cause and a purpose (result). Hence everything beginning with the dyad and ending with the universe is an object. Although the bodies and the organ are also objects, they are presented as additional forms for the clear understanding of the pupil.

#### WATER

### वर्णः गुहः, रसस्यशी जन्ने मधुरशासन्ते । छोदस्तय, द्रवत्ये तु सांमिदिकमुशहतम् ॥ ३६ ॥

० = //ऽ१०८ |१०६ = mpito colone = em.vot | १५६|| सर्वस्वत्रः देवच्च चे सात्साद्यमेत्रिंशचर्यत् ॥ ईह ॥

39. Water has white colour, sweet taste and cold touch, as also oiliness (sneha). Its liquidity is said to be natural.

Water is being described: Water, etc. The generic attribute waterhood is established as the determinant of the inherent causality of oiliness. Although oiliness, being present in both eternal and transitory things, cannot be the determinant of the effecthood, yet the being oiliness that is produced (panya-snekatra) should be understood as such

Objection: There cannot be any natcheed in atoms (of nater), since they have no edined that is follows that if they have petential can day, the resolutivity bound to be' produced some time.

Reply: Ret 20. For the generic attribute, xiv.

tolug to animally 3 (2)

<sup>ु</sup> पुत्रव का प्रकार है । वृद्धार का महाराज रव समस्य है एक माने हैं है । । । इस्तुराव अस्ताव रव वैद्यार प्रवास ।

و درو درو درو درو درو و درو و درو

determinant of the inherent causality of oiliness that is produced; and the generic attribute waterhood is established as the determinant of the inherent causality of what1 is characterised by that.2

To show that water possesses only white colour, the text says: Water has, etc., not that the possession of white colour is the definition of water. Or it (having white colour) means the possession of those generic attributes' directly concomitant with substancehood that abide in things4 possessing colour and are absent in things' having artificial liquidity; or the possession of these generic attributes directly concomitant with substancehood that abide in things possessing colour and are not co-existent with colours other than dull white. Hence crystals etc. are not wrongly included.

Siecet taste, etc.-Water has only sweet taste and celd touch. The having of sweet taste means the ich ession of those generic attributes directly conectmeant with substancehood that abide in things having sweet taste and are absent in things having

What, etc -i e water that is produced.

<sup>\*</sup> I've to to curth

bitter taste. Hence sugar etc., are not wrongly included. The having of cold touch means the possession of those generic attributes directly concomitant with substancehood that abide in things having touch and are absent in things, having touch other than cold.

Objection: Why say only white colour, since we

observe blue colour in the waters of the Jumna, for instance?

Reply: Not so; for blue colour is impossible in water, as it lacks the generic attribute earthhood, which is the determinant of the causality of blue colour. The perception of blue colour in the waters of the jumus is only superimposed by (the conjunction? of) its substratum.\* Hence when water is thrown up against the sky, we perceive its whiteness.

Objection: Well, what is the proof of sweetness in water? For no taste whatsoever is experienced in it through perception. It cannot be urged that in cocoanut water, for instance, sweetness is perceived; for it is only superimposed by (the conjunction of) its substratum. Otherwise, since sour and other tastes are perceived in lime-juice etc., water may as well have sour taste etc.

Reply: Not so; for the eating of the myrobalan cte, only reveals the taste of water. It cannot be unseed that eally in the improbalan a new taste is froduced through the conjunction of mater and heat;

संभागः वात्रान्यात्रात्रात्रात्रः । स्वत्रास्य विकास स्थलात्रात्रः विस्तानस्थातः वादस्यात् तादस्य त्यापन्याद्रते । व व्यापनायात्रात्राव्य

का विकास सम्बद्ध । स्वयं स्वर्थ :

to the safe at about hand bodite and an election of

anthur to educted .

for such an assumption would be cumbrous. And since earthicod is the determinant of the causality of sour taste etc., these tastes are not in water. The perception of those tastes in lime-juice etc. is only superimposed by (the conjunction of) its substratum. Similarly we must understand that being water that is produced (junya-jalatva) is the determinant of the causality of the cold touch that is produced, and waterhead is the determinant of the causality of what is characterised by that.1 The cold that is perceived in similal rubbed into a paste and so on belongs only to the colder water that is in the sandal-paste. That the p reeption of warmth in water is only due to something that is superimposed,2 is quite patent; for heat cannot after the properties of water.3

As also others: In clarified butter etc. also, the cuine s is that of the water which is in it; for water is the inherent cause of oiliness. Hence we must underat and that oiliness is in water alone. Its liquidity, etc. -Being natural liquidity (dravatvatva) is a generic attribute that is established by perception; and the determinant of the causality of what is characterised by it' is materhood alone. In oil etc. also the liquidity is that of water. It will be stated later on that oil helps combination owing to its profusion of oiliness.

High is an additional proof of the generic attri-ومهارية الإنهام المتعالمة

regarding a substance that is produced by the destruction of another, they are proved to be effects of the same stuff of which water is composed. Since the liquidity of hailstones etc. is counteracted by a particular kind of demerit, the perception of solidity with regard to them is illusory.

### Fire, Air and Ether उप्णस्पर्शस्तेजसस्तु, स्याद्वृपं शुक्कभास्वरम् । नैमित्तिकं द्रवत्वं तु. नित्यतादि च पूर्ववत् ॥ ४१ ॥

.41. The touch of fire is hot, its colour dazzling white, and it has artificial liquidity, while its eternity etc. are like those of the preceding one.

Fire is being described in the words: The touch of fire, etc. Hotness is a particular generic attribute aboling in touch, the existence of which is established by perception. Hence firehood, being the determinant of the inherent causality of the hot touch that is produced, is also a particular generic attribute. Its produced in atoms is to be understood as in the case of materioral. It cannot be urged that (this definition of the hold is) the possession of hot touch does not extend to meanlight, for instance, as it should; for there also have by the trach of the water that is in it. Similarly have a last of precived in the rays of a gem etc. on all the last on account of its not being manifested.

that the star production as colid.

Its colour, etc.—The white colour that is in fire and in the rays of an emerald etc. is not perceived, as it is overcome by the earthy colour.

Objection: If that colour be not perceived, things that possess it as an attribute would not also be visible.

Reply: Not so; for it is possible to perceive a thing by means of colour belonging to some other thing, as in the case of a conch by means of the yellow colour that is in bile. Some, however, say that in the case of fire, it is not the white colour that is overcome, but the whiteness of it.

### र्ज्यां नयनं, वहिस्वर्णादिविषयो मतः। अपाकजोऽनुष्णाशीतः स्पर्शस्तु पवने मतः॥ ४२॥

42. Its organ is the eye, and objects fire, gold, etc. Air is considered to have touch which is not changed through the action of fire, and which is neither hot nor cold.

Where it differs (from water) is being stated: Its organ, etc.

Objection: What is the proof of the eye being hery?

Reply: The eye is fiery, since it reveals the colour of others, without revealing the touch etc. of others, as we see in the case of a lamp. Since a lamp reveals its own touch, the words 'of others' have been first used to guard against the definition not extending to the example cited. And since a jar etc. reveal their own colour, the words 'of others' have been used for the second time to preclude its wrongly extending to them. Or, since diffused light (prabhā) may serve as an example, the words 'of others' first used may be smitted. To prevent the definition from extending to the connection of the eye with its objects, the words 'wille being a substance' are to be added.

The objects of fire are being stated: Fire, etc.

Objection: What proof is there that gold is a true of fire?

Reply: The objection is not valid. Gold is a time of fire, since when there is no obstacle, its lightly cannot be destroyed even by the intense

Comments on Later.

application of fire. That which is not so is not a form of fire, as is the case with earth. Nor is the above inference without a corroborative argument, because the liquidity of earth and of water that is produced can be destroyed by the intense application of fire.

Objection: Since the earthy portion (in gold) which is the substratum of the yellow colour and weight, also melts! at the time, (the reason) is inconstant on account of it.

Reply: No; it does not melt, like ink-powder put in water.

Others, however, say that in view of the fact that the substratum of yellow colour does not change its former colour even on the intense application of fire, one is to assume the presence in it of some liquid substance of a different kind, which acts as an obstacle. The substratum of yellow colour and weight which is in intense contact with fire, must be conjoined with some liquid substance which acts as an obstacle to colours of a different kind, because even on the intense application of fire it never as an obstacle to colours of a different kind, because even on the intense application of fire it never that the case of a yellow cloth immersed in water; find in the case of a yellow cloth immersed in water; and that leteign substance, being dincent from earth and water, must necessarily be fire?

third being described: the fire size since to the firms of most that the relation of most of the firms of the regularity of the relation of the first the relation of the first the relation of the relation o

atang bilang ang isi nite a pada apada at manahan at na gisi sandat 🎉

places such as the heart, and with its different activities such as issuing through the mouth.

Ether is being described: Sound, etc. Since ether, time and space are single individuals, etherhood etc. are not generic attributes. But etherhood is being the substratum of sound. Here the use of the word 'special' is intended to shut out all other special qualities. By this a proof also is adduced (for the existence of ether). To be explicit: Sound is a special quality, since it possesses a generic attribute which is not perceptible to the eye, but is perceptible to some external organ, as is the case with touch. sound, being a quality, is inherent in a substance, as is conjunction. This inference proves that sound inheres in a substance. Next we see that sound is not a special quality of things' possessing touch, because, while not having the conjunction of fire as its noninherent cause, it is produced independently of the qualities of its cause, and is perceptible, as is the case with pleasure. The expression 'while not having' etc. is used in order to prevent the definition from extending, for instance, to the colour that is produced through the action of fire. The words 'independently of the qualities of the cause' have been inserted to preclude its extending to the colour of a cloth, and The word 'perceptible' has been used to guard a must the definition extending to the colour of the of most of water, and so on. Thirdly, sound is not a gainty of space, time and mind, because it is a special young, the entire. Nor is it a special quality of the

billional but e, me and air.

<sup>·</sup> And a second.

soul, since it is perceptible to external organs, just like colour. Thus a ninth substance called ether, which is the substratum of sound, is established. It cannot be urged that, first of all, subtle sound is produced in the component parts of air, and then (gross) sound is produced in air, just depending upon the quality of the cause; for sound, being a quality that does not last as long as the substance to which it belongs, cannot be a special quality of air.

### । :क्रशीपृष्टक्ष सक्त , महाहूं क्रमें ह फ़्लीर

45. Its organ is the ear. Although it is one, (it becomes different) owing to its limiting adjunct (upadhi).

Since ether has no body and no object, its organ, only is being pointed out: Its organ, etc. It may be objected: Ether, for the sake of simplicity (lägisieus), is held to be one; but the ear is different according to different individuals. So how can it be ether? This is being answered: Although, etc. Though ether is a single entity, yet owng to differences in its limiting adjunct, viz. the outer ear, it becomes different, ing adjunct, viz. the outer ear, it becomes different, its, takes the form of the car.

#### TIME AND SPACE

### ॥ ४४ ॥ क्षम प्रियमानाम् स्थित क्यान सेनान्य

straint of the milvers.

45 (cond.). Time is the cause of things that are produced, and is considered to be the that

Colour to an grad an tink abute bute be andibung, finite, et fill

Time is being described: Time, etc. To adduce a proof of its existence the text says: Is considered, e.c. To be explicit: A perception such as, 'Now there is the jar,' takes into consideration the motion of the sun and so on. When this happens, one has to admit that there is some relation between the jar etc. and the motion of the sun and so forth. Now that relation cannot be conjunction etc. So time alone is assumed to be what brings about the relation. Thus also is it rightly considered to be the substratum (of the universe).

# परापरत्वधीहेतुः, क्षग्णादिः स्यादुपाधितः।

# दूरान्तिकादिधींहेतुरेका नित्या दिगुच्यते॥ ४६॥

46. It is the cause of the notion of priority and posteriority. It is converted into a moment etc. owing to its limiting adjuncts. The cause of the notion of distance, nearness, etc. is called space. It is one and eternal.

Another proof is being adduced: It is, etc. The cause of the notion of priority and teriority is time alone. That is to say, as the abstratum of conjunction, which is the non-inherent? Grand of priority and posteriority, time alone is

While the tay 'now,' we automatically refer to the the sun above or below the horizon by This motion is in the sun, and the jar is What Colabord the two? The answer is, it must

The colorest cause of priority or posteriority is the the state of privates of processors, which we have such a notion. The nonone of the state o The other must be time.

assumed, for the sake of simplicity, as an additional substance. It may be urged that if time is proved to be one, there will not be such varieties of it as a moment, a day, a month, or a year. This is being answered: It is converted, etc. Time, though one, gives rise to the application of terms such as a moment either! be an action determined by the previous noncion or disjunction determined by the subsequent contion, or previous non-existence of the disjunction determined by the subsequent contion, or previous non-existence of the subsequent conjunction determined by the cessation of the antecedent conjunction determined by the subsequent conconjunction. It cannot be urged that terms such as a moment would not be used after the subsequent conjunction, or an action determined by the subsequent

Butterflie Berammt bibbe B groups on him promise on any harm promised with our sign give in gage beinnen ing gener vom fig gener vom bei gegen generalieren generale रक्ष राज्य त्राच्या । क्षेत्र का कार्यकृति का सम्मान्यत् कृष्याम् अनुका सम्मान्यत् । क्षाप्रात्मान्यत्रात्मा that with the contraction and the second of and in resil out at order of our off transist leading रूप को रहाता वस्ता विकार वस्ता प्रकार स्थान है । when this eeglanctica course, that essentia is the owners these transfer guitand business and se maining anthorough minimum. That is to say the depument of transmit by the the condition of the conjunction. This is called the earlier tack there must be an interest to endealthing despute a actied institution of the authoritae of the nounces called the tiest moment. This dequuetion, again, is the duced by that action. The time associated with that is there is the previous neasoning of the distancian time the action and the resulting disjunction of a other weight there must be an interval, however minute mad, latteren through action. Now, since a cause precedes its effect, action, Suppose disjunction takes place in semistand Our conception of a moment etc. depends on sense

conjunction; for there would be other actions still. Should the use of terms such as a moment persist at the time of cosmic dissolution, it has to be explained, for want of any other alternative, by a reference to destruction. The use of terms such as a day is to be accounted for by the totality of particular groups of moments.

Space is being described: The cause, etc. Distance and nearness are to be understood here in a spatial sense. The extraordinary cause of the notion of them is space alone. The idea is that one undivided space is established, for the sake of simplicity, as the substratum of conjunction, which is the non-inherent cause of spatial distance and nearness.

# उपाधिभेदादेकापि प्राच्यादिव्यपदेशभाक्।

47. Although one, it is spoken of as the east ctc. owing to its different limiting adjuncts.

It may be urged, if space is one, how is our use of the terms 'east.' 'west,' etc. to be explained? This is being answered: Although, etc. The space that is the sect to Mount Udaya (Sunrise) in respect of a particular person is the east with regard to him. Similarly the space that is farthest from Mount Udaya is the word. Likewise the space that is nearest to Mount which is farthest is nearest to Mount which that which is farthest is the south; for it is

A second straining of the displation of the entire uni-

ele greens and anything that limits it.

specifically laid down, 'Mount Meru is situated to the north of all divisions of the world.'

### THE SOUL

## अत्मिन्द्रियाद्यधिशता, फरणं द्वि सकतुंकम् ॥ ४७ ॥

47 (contd.). The soul is the inspirer of the organs etc., for an instrument requires an agent.

The soul is being described: The soul, etc. The generic attribute soulhood is inferred as the determinant of the inherent causality of pleasure, pain, etc. That generic attribute does abide in God also; but owing to the absence of causes such as merit and demerit, pleasure, pain, etc. are not produced in lim. There is no corroborative argument in favour of the proposition that an eternal substance which is a potential cause must produce an effect.<sup>3</sup> Others, not certainly exist in God, for it has no proof. It not certainly exist in God, for it has no proof. It substance be urged that in that case God becomes a tenth substance; for a division\* can be made on the bails of sentiency.

<sup>\*</sup> Rughandtha Sucmani, the mest billant expenses to the two repetations of type, does not admit time and space to be endicine trong and expenses to be endicined trong that.

thilly his most along habitatur att fram bold that to be

The inspirer of the organs, etc.—That which indirectly imparts sentiency to the organs and body. Although the soul is undoubtedly an object of such perceptions as, 'I know,' and 'I am happy,' yet to one who has doubts about it, it cannot be brought home from the very first that the soul which is the object of the above perceptions, is distinct from the body etc. Hence another proof is being adduced: An instrument, etc. It is observed that cutting instruments such as an axe cannot produce any result without an agent. Similarly, the eyes and other instruments of knowledge cannot be presumed to produce any result without an agent. Hence an agent over and above them is inferred.

### शरीरस्य न चैतन्यं, मृतेषु व्यभिचारतः। तथात्वं चेदिन्द्रियाणामुपवाते कथं स्मृतिः॥ ४८॥

48. The body has no sentiency, for it is not found in dead bodies. If the organs have that (sentiency), how can recollection take place when there is loss (of any organ)?

It may be urged, why not regard the body itself as the agent? This is being answered: The body, etc.

Objection (by the materialist): Sentiency is but hand tige etc. So what harm is there in denying it to deal hadies, just as you maintain with regard to be reted each. For the absence of knowledge follows that the absence of life.

the contrast of primarily in the conf. But it is mani-

demail. cannot be destroyed, we should understand that it is and since positive entities that have no beginning the soul is also proved to be without a beginning; awakener. Thus, since the impressions, have no beginted to the present birth are alone presumed to be that other explanation, the merits and demerits that have impressions. Here,2 however, in the absence of any also be recalled; for there is no anakener of those other things experienced in a previous birth should enced in a previous birth. It cannot be urged that conduciveness to what is desirable, which was experidue simply to the recollection, at the time, of its that notion. In my view, however, the inclination is desirable, and there is nothing at the time to awaken caused by the notion of its conduciveness to what is will not have the inclination to suck; for this is sions. Similarly, if the body has sentiency, an infant cumbrous to presume an infinite number of impresbody generate impressions in the next body; for it is be urged that the impressions produced in the previous (continually) subject to birth and death.1 It cannot account of the accession and loss of their parts, are that have been seen in childhood; for bodies, on cannot account for the recollection in old age of things Reply: Not so. If the body has sentiency, one

is employed general arise and the simple of the property of the expense of the expension and the expension of the expension are also as a substitute of the expension of the expension are also as a substitute of the expension of

Activity of the standard of the control of the cont

It may be urged that the eyes and other organs themselves may well be both agents and instruments of knowledge; for there is nothing to show that these two are contradictory. This is being answered: If the organs have that, etc. 'That' refers to sentiency. How can recollection take place when there is loss, i. e. of the eyes etc. There will be no recollection of things already experienced through the eyes, when the latter are gone, because then there would be no perceiver; for it is impossible for one person to recollect what another person has seen. The idea is that experience and recollection stand to each other as cause and effect through having a common substratum.

### मनोऽपि न तथा, ज्ञानाद्यनच्यक्षं तदा भवेत्।

49. The mind too is not such (sentient); for then there would be no perception of knowledge etc.

It may be urged: Granted that the eyes etc. have no sentiency, but the mind, which is eternal, may well have it. This is being answered: The mind too is, etc. Not such, i. e. not sentient. For then there would be no perception of knowledge etc. Since the mind is atomic, and since medium dimension is a made any factor of perception, when knowledge, it are the arise in the mind, it will be impossible to pare be them. This is the idea. The reason why the mind is to be treated as atomic, will be stated later and

<sup>416 6 2 3 33.</sup> 

# DIFFERENT VIEWS ABOUT THE SOUL

Objection (by the Buddhist Idealist): Why not say that consciousness (vijnāna) alone is the soul? Being self-estulgent it is sentient; knowledge, pleasure, etc. are but its various forms. Again, just because it is a positive entity, it is momentary.\(^1\) Since each preceding consciousness is the cause of the succeeding consciousness, the stream of ego-consciousness\(^1\) is absolutely unobstructed even in protound sleep. Resolutely unobstructed to the succeeding consciousness are transmitted to the succeeding consciousness, as in the transmitted to the succeeding consciousness, as in the case of a cloth? rendered traggrant with the perlume of the succeeding consciousness.

Reply: No. If consciousness has for its object the whole universe, then every soul would be omniscient—which is wrong. And if it has for its object some particular thing, there is no conclusive reasoning in favour of this. Further, objects would hash even in profound sleep; for knowledge implies objects.

\*According to the Buddhists, whatever exists is mo-

could be transmitted from the mother to the child.<sup>3</sup> Nor can it be said that this is determined by the relation of independent cause and effect<sup>2</sup>; for impressions cannot at all be transmitted.<sup>3</sup>

Objection: Suppose it is said that the transmission is but origination in a succeeding consciousness.

Reply: No; for there is nothing to produce the impressions. It the states of consciousness themselves produce them, there would be an endless number of impressions.\*

Objection: Let us assume that there is some peculiar power in (some of the) momentary states of consciousness.\*

Reply: No; for there is no evidence to prove this, and the assumption is cumbrous. This also refutes the view that consciousness abides only in momentary bodies\*; because it is cumbrous, and there is no evidence in support of the peculiar power (which is no evidence in support of the peculiar power (which is claimed). In seeds etc. also we need not assume

any kinetic activity,1 since we can explain (the phenomena of sprouting) by the presence or absence of auxiliaries.

Objection (by the Vedantist): Well then, since momentary consciousness involves cumbrousness, let us say that eternal consciousness alone is the soul; for we have such Sruti texts as, 'This self, my dear, is indeed immutable' (Br.-Ar. Up. IV. v. 14), and 'Brahman is Truth, Knowledge and Infinitude' (Tait. Up. II. i. 1).

Reply: No; for it has already3 been shown that the soul cannot be possessed of objects, while there is no evidence to show that it is knowledge at all if it is bereft of objects, and we do not experience it as possessed of objects.4 Hence it is proved that the eternal soul is different from consciousness etc. Moreover, the statement 'Truth, Knowledge,' etc. refers to Brahman, but it is not applicable to the individual soul. Since these souls, on account of their (varying) knowledge or ignorance, happiness or nd ery, etc., are proved to be different from one another, they are all the more palpably different from Cod.2 Otherwise separation between bondage and

form or and and water

ffing by last paragraph.

<sup>\*</sup> We do perceive the soul, we do not perceive any e o che control è maticat. L'impose hour,

liberation would be impossible. Even the Vedic passages that teach the oneness of the individual souls with God merely eulogise them by this mention of their oneness with Him—showing thereby that they only belong to Him. They also say that a man must strive for realisation just by thinking of himself as identical with God. Hence does the strui say, 'All (these) souls are fixed (in the Self)' (Bṛ.-Ār. Up. II. v. 15).

(of two things) is a single entity, yet everybody admits nith the two individual entities?3 For although each duality also, being the negation of unity, is identical with its substratum,2 we reply, why not say that in Brahman, being the negation of untruth, is identical individual entities. It you say that the truth that is easy to say that God and the soul constitute the two is no duality? (in the state of liberation), it is quite not abide in It, It is Truth. Similarly, although there out any attributes, and as such, although Truth does would vanish. For according to you Brahman is withthe soul). It cannot be urged that the duality also still certainly remain two individual entities (God and destroyed. Supposing it was destroyed, there would liberation; for difference, being eternal, cannot be do state off in sonstongi do notizezes off no esale It is also not a fact that the identity takes

<sup>.</sup> Which its the substratum of the negation of unity.

that the two together are not one, just as we say that earth and water together do not possess smell. As for the Vedic passages that teach oneness in the state of liberation, they only speak of similarity (of the soul with Brahman) on account of (its) being free from pain etc., as when a priest has accumulated great wealth, we say that he has become a prince. Hence it is that the Srutis say, 'Being free from taint, (the soul) attains absolute sameness (with Brahman)' (Mund. Up. III. i. 3).

God also is not Knowledge and Bliss, but the sul stratum of knowledge etc. In texts such as, 'Brahman is' eternal 'Consciousness and Bliss' (Br.-.ir. Up. III. ix. 28), the word 'consciousness' only means the substratum of consciousness; for we have to take account of texts such as, 'He who is omniscient and all-knowing '1 (Mund. Up. I. ii. 9, II. ii. 7). The word anandam (bliss) also means 'possessed of bliss; for it has the suffix ac, denoting possession, coming as it does under the group beginning with the word arsas.2 Otherwise it would be masculine (inandah). Even the absence of pain can be figuratively spoken of as bliss3; for in the absence of pain the feels pleasure, just as one says, 'I feel happy,' when a load etc. have been taken away from him. Or be there he blass in God, but He is not bliss; for the eruti saya, "Not bliss."

Objection: Why not take it in the sense of 'one and has no blue to

Filthers things in a general way as also particularly.

<sup>1 74 .</sup>ce V d. 127. Hence it is Louter.

site it promised in metalimit the existence of bliss in God,

Reply: No; for the assumption would be farfetched, and it would clash with the context as well as
with the use of the suffix ac, denoting possession. This
is our view in brief.

to notation of the object; it is a modification of tral, like the relation of the face to a mirror. This ' owing to the transparency of the intellect. It is unsoul, (produced by) the image of the sentient soul should be done by me,' the 'me' is the relation of the hension of their difference.3 In the judgment, 'This of sentiency in the intellect are due to a non-comprejar etc. The feeling of agency in the soul and that the organs, as knowledge that is its connection with a tion. It is its modification, through the channel of ence of that the soul attains transmigration or libera-(antah-karana). Through the existence or non-existcalled cosmic intelligence (mahat) and the internal organ The intellect is a modification of Nature; it is also wise be explained, the existence of the soul is assumed. ency noticeable in the intellect (buddhi) cannot othersidered to be a cause. Since the feeling of sentimay also be destroyed; hence the soul is not conthe effect the cause, as being another form of that, cause and effect are identical, with the destruction of is unattached like the lotus leaf, but sentient. Since Nature (Prakiti) is the agent, and the soul (Purușa) This also refutes the following (Sainkhya) view:

the to semistified than than which by implication that is denoted by its the semistified other than which is denoted by its thing to semistified other than white is denoted by its selection with the semistified of the semi

\* The confusion that the soul is possessed of knowledge. \* The difference between the soul and the intellect.

the intellect through the channel of the organs, and is real, like the film (of mist) on a mirror on which somebody has breathed. 'Should be done' represents the relation of activity. Thus the intellect has three parts. The unreal relation of the soul to knowledge, which is a modification of the intellect, corresponding to the relation of the face to the mist on the mirror, is called experience. Pleasure, pain, desire, aversion, effort, merit and demerit also belong, like knowledge, to the intellect; for they are perceived as co-existing in the same substratum with effort. And the intellect is not sentient; for it is subject to change.

The reason is that like effort, merit and demerit, and pleasure and pain, sentiency also is perceived to abide in the same substratum, and there is no evidence that there is any other sentient principle besides the agent (soul). If you say that the judgment, 'I who am sentient am doing,' is an illusion in respect of the portion relating to sentiency, why don't you admit the same in respect of the portion relating to effort also? Otherwise, if the intellect be eternal, there will be no liberation, and if it be transitory, there will be no liberation prior to its appearance.

Objection: Since the intellect is the effect of maintent Nature, it is insentient; for cause and effect are identical.

All those things co-exist. A person feels that he does the compares mark or demerit thereby, and is happy or marked in a harpence. Similarly he also feels that he is a dead

the the execution to the centions principle be different.

Reply: No, for this? is unfounded.2 Since there is no evidence to show that an agent is produced,² and since those who are free from attachment are not observed to have any birth,\* the agent must be withmost a beginning.2 And since a positive entity that has no beginning cannot be destroyed, it is eternal. So why assume the existence of Nature and the rest? Nor can it be urged that it clashes with the text, 'Actions are always being done by the gunas\* of Praktti.7 He whose mind is bewildered by egotism thinks that he is the agent' (Gitā, III. 27). For the passage means: 'By the gunas or qualities of Praktti or the unseen treath (adṛṣta), that is, by desire etc., which are produced by the unseen result'; and 'I alone am the

God's perceptions dies perception is that knowledge to which the organization organ called mind, yet the aphorism means that month all knowledge whatsoever is produced by the Perception is knowledge produced by the organs. Alcomparison and verbal testimony are the means? mentioned in the aphorism, 'Perception, interence, (kinds of knowledge) are to be understood as the four Perception, etc. The instruments of these four

A Northern Co. Month in the contract of the Co

words, and recollection on experience, the definition is not too wide so as to include them. This definition covers God's perception as well. Inference is that knowledge which is produced by consideration (paramarsa). Although the perception etc. of consideration are also based on consideration, yet inference should be taken as that knowledge only which is based on consideration, but of which a reason (hetu) is not the object. It cannot be urged that the definition does not include that form of inference in which an occasional reason4 occurs; for by inference is meant the possession of that generic attributes concomitant with experiencehood which is present in the knowledge above referred to. Or inference is knowledge based on the knowledge of invariable concomitance (of the reason with the thing to be inferred). Similarly comparison is knowledge based on that of similarity; and verbal comprehension is knowledge based on that of words. Strictly speaking, we can take up any particular inference and say that being an inference consists in the possession of that

Or synthetic judgment: the knowledge that a con-Content (typpya) of the thing to be inferred (sādhya) is for cut in the subject of the inference (paksa: that in which the 1st sence of comething is to be inferred). It will be dealt <sup>2</sup> A, in apperception (anuvyavasāya).

<sup>3</sup> Refers to recollection.

54. The objects of the eye are manifested colour, substances possessing it, separateness, number, disjunction, conjunction, distance, nearness, oiliness, liquidity, together with dimension;

## किया जातियोंग्यवृत्तिः समवायश्च ताद्वशः । गृज्ञाति चक्षुः संवन्धादालोकोद्भृतरूपयोः ॥ ४४ ॥

55. Actions and generic attributes that abide in visible things, as also such inherence. The eye perceives (objects) through the relation of light and manifested colour.

Manifested colour: Summer heat etc. are not visible, since they do not possess manifested colour. Possessing it—i. e. possessing manifested colour. That abide, etc.—It is to be understood that separateness etc. must also abide in visible individuals (in order to be visible). Such, i. e. abiding in visible individuals.

But how do they at all come to be perceived by the eye? This is being explained: The eye perceives.

C.C. Manifested colour and the conjunction of light are

if it is this chase is to be connected with all the items is the regulators a doughards.

the causes of ocular perception. It is to be noted that in the ocular perception of a substance, the above two are causes by the relation of inherence; in the perception of colour or the like abiding in a substance, by the relation of inherence in their substratum; in the perception of colourhood or the like which inheres in what is inferent in a substance, by the relation of inherence in what in its turn inheres in their substratum.

## उद्भुतस्पर्शवङ्कां गोन्तरः स्वोऽपि च त्वचः । कपान्यचक्षुयो थोग्धं ; कपमश्राप्त कारणम् ॥ ४६ं ॥ इब्यान्यक्षः ; स्वचा यानकारणम् । ॥ १४ ॥ :तिङः :तिम रिष्ठं । । १४ ॥ १४ ॥

56-57. The objects of the skin are substances possessing manifested touch as also the stances possessing manifested touch as also the eye, except colour (etc.). Colour is a cause even in this (tactual) perception of substances. The contact of the skin (teac) with the mind is the contact of the skin (teac) with the mind is the the mind are pleasure, pain, desire, aversion, the mind are pleasure, pain, desire, aversion, knowledge and effort.

The objects, etc.—The objects of the chin are such that objects of the chin is also the chin to also the latters is a stantant that the latters is a stantant that the latters is a stantant object in the case the latter in the case the control of the case that the chin perception is the case that the distribution of the case that the chin perception is the case that the chin is also been that the case that and calculate the control of the case that the case that the control of the case that the case that the control of the case that the case the case that t

the ourse up a

our unique for ample

also actions and generic attributes that abide in visible things, are likewise perceptible to the skin. Colour is a cause even in this perception of substances due to the skin. Thus, in the perception of substances through the external organs colour is a cause.

The new school, however, holds that colour is not a cause in all perceptions of substances through the external organs, since there is no such evidence; but by the method of agreement (anvaya) and difference (vyatireka), in ocular perception colour is a cause, in tactual perception touch (and so on).

Objection: What is the cause in all perceptions through the external organs?

Reply: Nothing in particular. Or the possession of special<sup>2</sup> qualities that are absent<sup>3</sup> in the soul, except sound,<sup>4</sup> may be the cause.

Objection: If colour is considered to be the cause, it will be simpler.

Reply: Not so; for then air cannot be perceived by the skin.

Objection: This is a proposition we accept.

Reply: In that case, for the sake of simplicity let manifested touch be the cause. And if this should render diffused light (prabhā) invisible, why don't you

We produce of absence of something determines the presence of absence of another thing.

<sup>\*</sup>This word is added to exclude the perception of time at the sign the external organs.

<sup>\*</sup> The clause is for excluding such a perception of the

<sup>4</sup> Item is to exclude such a perception of ether-

take it also as a welcome objection? Therefore, since the judgment, 'I touch air,' is possible, like the judgment, 'I see diffused light,' the perception of air also is undoubtedly possible. Neither colour nor touch is a cause in all perceptions of substances through the external organs. The unity of air as also of diffused light is indeed perceptible. Sometimes duality etc.' light is indeed perceptible. Sometimes duality etc.' also. Sometimes, however, their number, dimension, also. Sometimes, nowever, their number, dimension, etc. are not perceived on account of some defect,<sup>2</sup>

The contact, etc.—That is to say, the conjunction of the skin<sup>2</sup> and mind is the cause of knowledge in general. What is the proof of it? Because when the mind, during deep sleep, leaves the skin and rests in the pericardium (puritat), it produces no knowledge, in the pericardium (puritat), it produces no knowledge.

be during deep sleep? Is it experience or recollection? It cannot be the former; for there are not the conditions? of experience. To explain: Since in ocular and thoush of experience, owing to their very absence there cannot be easily other perception. Again, just because knowledge etc. are absent, there cannot be any nicotal perception, and in the absence of knowledge etc. are absence of knowledge that their cannot be any streeption of the scalar dark that their cannot be any there cannot be any there cannot be any there cannot be any factor.

A Which the confidence to the confidence of the

comitance (of the reason with the thing to be inferred) is absent, there cannot be any inference; because of the absence of a notion of similarity there cannot be any comparison; and owing to the absence of a knowledge of words there cannot be any verbal comprehension. Thus, because of the absence of the conditions of experience, there cannot be any experience. Nor can it be recollection, for there is no stimulating agent.<sup>1</sup>

Reply: Not so; for individual desire etc. produced immediately before deep sleep can be perceived. and through them the soul also, since there is nothing to prove that the knowledge in question is beyond the senses, or that just before deep sleep only indeterminate knowledge arises invariably. If, however, the conjunction of the skin and mind be considered to be the cause of all knowledge, then during palatal, ocular, or any other perception there would be tactual perception of a substance, since there is the conjunction of the object and skin, as also that of the skin and mind; or owing to their obstructing one another there would be no perception at all. Regarding this some maintain that since by the above reasoning the conjunction of the skin and mind is proved to be the cause of knowledge, it is inferred, on the evidence of experience, that the conditions of ocular or any other perception obstruct tactual and other perceptions. Others, however, say

Recellection is possible only if the impression (sainsinfo) is stimulated, and as there is no knowledge of similarity the the impression cannot be roused from the subconscious for a last of the stimuli that rouse a subconscious to the impression into a recollection, the reader is referred to Nanadata III. it 41.

that in deference, to deep sleep the conjunction of the derm (carman) and mind is inferred to be the cause of knowledge, and that since during ocular or any other perception there is no conjunction of the skin and mind, there is no tactual perception.2

The objects cognised by the mind: Objects of perception through the mind (alone). Mati means knowledge, kiti effort. Similarly pleasurehood, pain-hood, etc. are also objects of the mind. Likewise the soul is also an object cognised by the mind, but it is not mentioned here, as it has already been stated in the passage, 'Is known only through the mind' (verse 50).

### त्रानं यशिविकत्वाख्यं तद्तीहरू फरणं मतम् ॥ ४८ ॥ महस्यं पहिन्दे हुतः ; इति

58. The knowledge that is called indeterminate is considered to be beyond the senses. Medium dimension is a cause of the six kinds (of perception). The organs are considered to be the instruments.

The knowledge, etc.—Inmachially after the conjunction of the eye etc. it is impossible to have a knowledge like, 'It is a jar,' about semething qualities? by jathood etc., because the knowledge of the qualities tion 'jathood etc., because the knowledge of the qualities to a qualified knowledge the knowledge of the qualities to a qualified knowledge the knowledge of the qualitication is a came, 'So at test there are knowledge for

in the common marks in composition with a series for thing a composition with a series from high a

The state of the s

which does not comprehend the relation between a jar and jarhood. That is indeterminate knowledge. And it is not perceptible.1 To be explicit: The perception of knowledge is never without a comprehension of the relation (between the object and its qualification); ior (regarding it) we have the experience, 'I know the jar.' Here knowledge is presented in the soul as a feature (prakāra), as is the jar in respect of the knowledge, and jarhood in respect of the jar. The feature itself is designated as a qualification (visesana). That which specifies a qualification2 is called the determinant (avacchedaka) of the qualificationhood. The knowledge' which is cognisant of this determinant of the qualificationhood as a feature is the cause of the knowledge that a qualified thing is related (to another). In indeterminate knowledge jarhood etc. are not cognised as features; hence it is not possible for the relation of a jar or the like, which is qualified by jarhood etc., to be cognised in knowledge. Nor can there be a qualified knowledge of a jar or the like, in which jarhood etc. are not (cognised as) features; for it is the rule that the knowledge of all categories other than the generic attributes and the unanalysable characteristic (akhandopādhī) must have some attribute as its feature.

<sup>1</sup> To the mind.

<sup>\*</sup> As juriled does a jar.

<sup>\*</sup>E g the knowledge of a jar which is possessed of

A court attribute is perceived by itself; for if it were contact through some other attribute abiding in it, it would be a represent in infinitum. So with the unanalysable with through e. g. etherhood.

#### Modes of Perception in Different Cases

Medium dimension, etc.—In the perception of substances medium dimension is a cause by the relation of inherence. In the perception of qualities, actions and generic attributes, which inhere in substances, it is a cause by the relation of their inherence in its substances. In the perception of qualityhood, actionhood, etc., which inhere in what is inherent in substances, by the relation of their inherence in what in in its turn inheres in its substances, by the relation of their inherence in what in its furn inheres in its substances, by the relation of their inherence in what in its furn inheres in its substantam.

The organs, etc.—Here also the words ' of the six kinds' are understood.2 Organhood is not a generic attribute, because it would make a cross-division? with conjunction of the mind which is the cause of knowledge, without being the substratum of any manifested special quality\* other than sound. The last portion the souls etc.—is inserted in order to exclude the souls etc. Since the manifested special quality sound is present in the ear, the epithst ' other than sound sound is added (to include it) Special quality sound' is added (to include it) Special qualities like colour are also present in the eye, latter than sound' is added (to include it). Special qualities like colour are also present in the eye, latter than sound.

्द्रवे अध्यक्ष एक लेक्सपुर प्रकृत्व

 <sup>4.</sup> In a supplementary of the contract of the supplementary of the contract of the

bute, since it would make a cross-division with whitecolourhood etc. It cannot be urged that manifestedness is indeed various, being the concomitant of whitecolourhood and so on; for then as manifested colour etc. it cannot be the cause of ocular and other perceptions.1 But the non-manifestedness that is the concomitant of white-colourhood and so on is indeed various,2 and manifestedness is the aggregate of the negations of that,2 and it is also present in conjunction etc. According to this definition, manifested qualities like conjunction are also present in the eye etc.; hence the epithet 'special.' The first portion of the sentence ( Being the substratum, etc.) is for excluding time six ' Since according to the old school the conjunction of the parts of organs with the objects is also a cause of perception, the word 'mind' is put to exclude the parts' of organs; and since according to the new school the conjunction of the eye is a cause of the perception of the non-existence of colour in time etc., because it

If the manifestedness that is the concomitant of white-clumbed be the determinant of the causality of ocular larger in them it cannot apply to the manifestedness that is the consumtant of plue-colourhood, for instance. If, on the other hand, the aggregate of the different forms of leading days which are the concomitants of white-colour-cold along which are the concomitants of white-colour-cold along which are the concomitants of white-colour-cold along the unit wal, etc., be the cause, then, since such a spiritual cannot exist anywhere, it can never be the differential of the causality in question.

Figure and colourhood, blue-colourhood, etc. have

As a second of presented as a common characteristic and the second distribution into the causality.

<sup>\*</sup> Rivers to quee, for instance.

will have they the would be organs.

produces connection, the word 'mind' is put also to exclude time etc., which are the substratum of this conjunction. The clause, 'which is the cause of knowledge,' is also for excluding time etc. The instruments: An instrument is an extraordinary cause. The extraordinary cause. The extraordinary cause instruments:

विषयेन्द्रियसंबन्धे व्यापारः, सोऽपि पद्भियः। इन्ययहस्त संयोगात् ; संयुक्तसमवायतः ॥ ४६ ॥ इन्येषु समवेतानां ; तथा तत्समवायतः। वयपि समवेतानां ; शब्दस्य समयायतः॥ ६० ॥

59-60. The operation is the connection between the organ and the object. It is of six kinds. The perception of substances arises from conjunction (of the organ and object); that of things inherent in substances from inherence in what is conjoined (with the organ); that of things inherence in things from inherence in what in its turn inheres in things conjoined (with the organ); that of sound from inherence (in the organ); that of sound from inherence (in the organ); that of sound from inherence (in the organ);

# विशेषणतया तद्वद्भावानां प्रहो भवेत्। यदि स्यादुपलभ्येतेत्येवं यत्र प्रसन्यते ॥ ६२ ॥

62. Similarly the perception of non-existence in its various forms is also due to the relation of attributiveness. It occurs where one would urge, 'If it were, it would be perceived.'

The operation, etc.—' Operation' here means connection (sannikarsa).1 The six kinds of connection are being pointed out through examples: The percepin a ct substances, etc. The perception of substances is due to the conjunction of the organ (with them); the perception of things2 inherent in substances is due to the inherence in what is conjoined with the organ. Similarly with the rest. Strictly speaking, the cause of the ocular perception of substances is a conjunction of the eye, the cause of the ocular perception of things inherent in substances is inherence in what is conjoined with the eye; the cause of the ocular perception et things, inherent in what, inheres in substances, is minerence in what in its turn inheres in things conjoined with the eye. Similarly in other cases also there

<sup>1</sup> V) after a stranglated here as 'operation') is defined as that were the effect of something, but helps to produce the thing that a traced by that something. Obviously, therethe state of the such it cannot apply to the for this takes place by the relation of of the strend Hence the word, though used treme the word, along the word, along the word, along the state of the The same of the in vertes 63 and 65. er. a view advatables

s printing and activation, etc.

न्तु कर कि नव रहा कि कार्यु कि ए प्रधानिकार नेतृ क्या को स of the proceeded in also their testalso-on tour story aft the almagness all orab estimated tail out the nice the ganguily there is no earling becelving et est teles the at a come is not co-existent with inclining states to a the everyoft promise the confinement of the everyon bood etc. of the blue and other colours of an abita are ency a confunction of the eye. Thus the blue-columherence in what in its naturation that a solution sui er examtedus ni excului tudu ni tratadni egnidt dimension; and the cause of the ocular perception of which is co-existent with manifested colour and medium indefence in what has that conjunction of the eye the ocular perception of things inhering in substances is be visible. Therefore we must say that the cause of Likewise existence in air and in its touch etc. should an atom of earth) through the medium of a jar etc. to) boordiffing at takes of bootstabau ad of at noisastatib both (atom and jar). Similarly the relation of medium colour exists (in the atom) only through the medium of blue colour of a jar, while the relation of manifested exists (in blue-colourhood) through the medium of the an atom. Hence the relation of medium dimension exists in the blue colour of a jar as well as in that of blue-colourhood that is in blue colour is but one, and indirectly? To be explicit: The generic attribute manifested colour and of medium dimension exists earth not visible, although there also the relation of atom of earth as well as the earthhood of an atom of the blue-colourhood of the blue colour that is in an exists a purely individual causal relation. But why is

ベット・コービ なつばる

conjunction of the eye is at its front, there is no perception of the jar; hence the conjunction of the eye must be qualified by the epithet 'co-existent with the conjunction of light.'

Similarly the cause of the tactual perception of substances is the conjunction of the skin; that of the tactual perception of what is inherent in substances is inherence in what is conjoined with the skin; the cause of the tactual perception of things inhering in what in its turn inheres in substances, is inherence in what again inheres in things conjoined with the skin. Here also, as before, the qualifying epithet 'co-existent with medium dimension and manifested touch' is understood. Similarly the cause of the perception of smell is inherence in what is conjoined with the nose; and that of the nasal perception of things inhering in smell is inherence in what in its turn inheres in things conjoined with the nose. Likewise the cause of the perception of taste is inherence in what is conjoined with the tongue; that of the palatal perception of things inhering in taste is inherence in what in its turn inheres in things conjoined with the tongue. The cause of the perception of sound is inherence (in the ether) circumsented by the ear; that of the auricular perception of what inheres in sound is inherence in what in its turn statics in (the ether) circumscribed by the ear. Here in my ry case the perception is to be understood as a mod (or relative). Supernormal perception, which has i dealt with (in the next verse), takes place even with it the conjunction of the organ, etc. Similarly the same of the perception of the soul is the conjuncto a set the mind; that of the mental perception of

what inheres in the soul is inherence in what is conjoined with the mind; the cause of the mental perception of things inhering in what is inherent in the soul, is inherence in what in its turn inheres in things conjoined with the mind.

in its turn is the attributiveness of the cheef enemihalve to enabydodinia aff as ino os bas bood-A yd existence of C-bood etc. in the non-extence specified (the ether) circumscribed by the ear, sumfarly the near and the like, as the attributiveness of what inheres in A in book-M to tall, the ear, that of Behrod in A. that of sound, as simply the attributiveness of the things inhering in what is conjoured (with the cyc); ete, in number and so forth, as the attributiveness of is conjoined (with the eye); the non-existence of colour and the like is perceived as the attributiveness of what kinds—e. g. the non-existence of a jar etc. in the ground ceptible.\* Here, although attributiveness is of different Valstesika system, however, inherence is not perof what is related to the organ. According to the well as of inherence is the attributiveness (visconnata). The cause of the perception of non-existence as

scribed by the ear; likewise the non-existence of a cloth etc. in that of a jar and the like, as the attributiveness of things that are the attributiveness of what is conjoined with the eye; and so with the restyet as attributiveness it is to be regarded as one. Otherwise the tradition of the old school that relation is of six kinds, would be contradicted.

If it were, it would be perceived: The cause of this perception of non-existence is a non-perception that is possessed of capacity. For instance, when we have the (wrong) notion that a jar is on the ground, and so on, the non-existence of the jar and so forth cannot be perceived. Therefore the cause of the perception of non-existence is the non-perception of its counterpositive.1 In this,2 capacity is also a necessary condition. It is that (sort of non-perception) whose counterpositive has to be assumed on the assumption of the existence of the counterpositive of the non-existence. It means: That (kind of non-perception) whose counterpositive, viz. perception, has to be assumed if we assume the existence of the counterpositive, viz. a per etc., is the cause of the perception of non-existence. To explain: Where the conjunction of light and other conditions exist, we can assume that if there had been a jar, it would have been perceived; here the nonstance of the jar etc. is perceived. But in darkness the above assumption cannot be made; hence there is to callar perception of the non-existence of the jar etc. de clarkness. La tual perception, however, can indeed the place; for even without the conjunction of light,

transford a man constance or absence is being perceived.

and a proposal of the counterpositive (the jary,

tactual perception can be assumed. Things like weight are incapable of being perceived; so their non-existence also is not perceptible, because there the perception of weight and the like is impossible to assume. The nonstratence of manifested colour in air, of perfume in stone, of bitter taste in molasses, of coldness in fire, of sound in the ear, of pleasure in the soul, and so on, is perceived through the respective organs, since it is possible to assume those perceptions. In the perception of the non-existence of relationship, the counterpositive must be perception of the non-existence the substratum must be perception of the non-existence the substratum must be perceptible. Hence the difference from ghouls etc. that ceptible. Hence the difference from ghouls etc. that exists in a pillar and so forth is also indeed perceived exists in a pillar and so forth is also indeed perceived by the eye.

63. Supernormal operation (connection) is said to be of three kinds: That based on a common feature, that based on knowledge and that due to yoga (concentration).

Thus perception is of two kinds according as it is binds of the six kinds of the six the six kinds of collection of supernormal. Of these, the six kinds desired from supernormal connection is being don't with:

Supernormal operation; our of the six of t

characteristic. Now if the word 'characteristic' is used in the sense of identity, then we get the meaning: a connection (pratyāsatti) identical with the common feature itself. And that common feature should be understood as a feature (prakāra) in the knowledge relating to the substantive which is connected with the organ. For instance, where smoke or the like is connected with the organ, and the knowledge that it is smoke has arisen, with smoke as its substantive, in that knowledge smokehood is a feature. And through that smokehood as the connection, there arises the knowledge 'cases of smoke' comprising all smoke. Here if we simply say that (the common feature is) a feature in what is connected with the organ, then after one has mistaken a mass of dust as smoke, one cannot have a knowledge of all smoke, since there is no connection of the organ with smokehood. According to my view, however, it is the mass of dust that is connected with the organ, and there is the knowledge that it is smoke, which has the dust as its substantive; smokehead which is a feature in that knowledge is the connection. The connection with the organ must be taken as normal (lauksha).1 This2 is with regard to external ergan, Regarding mental (supernormal) perception, however, the common feature which is a feature in the knowledge is the connection.

of all raises of small be a series of sensuous cognitions of all raises of small on the basis of smokehood previously death of the raine reason the connection must also be smallered.

Live to relating to the object which is connected with the

This is It should be borne in mind that siminva literally

A construction of the state of

when, although there is no connection with the organ, there is the common feature (jarhood) which is a feature (prakāra) in such knowledge? Therefore it is the knowledge of the common feature which is the connection, and not the common feature itself. This is being stated: The knowledge, etc. Āsatti is the same as pratyāsatti (connection). So in the word sāmānyalakṣaṇa, lakṣaṇa means an object (of knowledge). Hence we get the meaning: The knowledge of the common feature is the connection.

It may be urged that where, even without the conjunction of the eye etc. there is the knowledge of the common feature, there might be ocular or any other perception of all jars and so forth. To preclude this the text says: The sum total, etc. It means: When we want to have perception through an external organ by means of (the connection of) a common feature, there must be present the sum total of causes of the perception of that common feature by the corresponding organ, in some object possessing that feature. The sum total in question is the conjunction of the eye, that of light, and so on. Hence there is no such perception by the eye etc. in darkness, for instance.

## विषयी यस्य तस्यैव व्यापारी द्यानलक्षणः। योगजो द्विविधः प्रोक्तो युक्तयुज्जानभेदतः॥ ६४॥

65. The connection based on knowledge is with regard to that alone which is the object of cognition. (Supernormal connection) due to your (concentration) is stated to be of two kinds according to the division (of yogins) into those

i de la inference etc.

who have attained concentration and those who are striving for it.

to the first and of the black was earlied between that is no man of the fitting that around of their and the feeling the stanfill that it is the stanfill the feeling of of the most extend bar amond of blear stolet the complete and the strongly the chaminton of surfact हर नहार ए पर कृश्वय प्रधानवाका त्या प्रधान कृतिहरू का other time of place is the centential to and to seek it can i there can be a doubt whether one see teleting to evine mount by the connection based on a certain a feature. my view, however, since all smoke is (supermanially) ed guidante. Accorderant at for to wil to inclinionies all designs and other doubt off (ami) off the amount perceived is already known, and no other smoke is For since the relation of fire of the smole that is being is there if all fire and all smoke are not perceived? testure is admitted. It cannot be urged: What harm For this purpose the connection based on a common the help of the connection based on a common feature? of all smoke as smoke and of all fire as are, without without connection.1 So how can there be knowledge idea is this: In perception, knowledge is not possible the connection of the thing itself that we know. The of its substratum, whereas that based on knowledge is pased on a common leature produces the knowledge the text says: The connection, etc. The connection there would be no distinction between the two. Hence a common feature be also a form of knowledge, then knowledge be a form of knowledge, and that based on It may be urged that if the connection based on

gentre bys grant through any manager g

the connection based on knowledge is not admitted, how can there be the knowledge of fragrance when one has the (ocular) perception, 'The sandalwood is fragrant.' Although there may be the knowledge of fragrance through the connection based on a common feature, yet the knowledge of fragrancehood arises through the connection based on knowledge. Thus, where a mass of dust is known as smoke, the knowledge of the mass of dust (as smoke) in apperception arises through the connection based on knowledge.

(Supernormal connection) due to yoga, etc.—That is to say, a particular virtue arising from the practice of yoga, of which the Vedas, the Purāṇas, etc. speak. According to, etc.—Since the yogins belong to two classes according as they have attained concentration or are striving for it, the resulting virtue also is of two kinds. This is the idea.

### युक्तस्य सर्वदा भानं, चिन्तासहकृतोऽपरः।

66. A yogin who has attained concentration always has knowledge (of everything), while the other type is aided by meditation.

A yogin, etc.—The yogin who has attained concentration can always, through his mind supported by the virtue arising from concentration, have knowledge of everything (in the universe) including ether, atoms, etc. One of the second class, however, needs the help of particular meditations.

A near the already knows that sandalwood is fragrant, forced, many lastely on vering a piece of it that it is fragrant. Here has precious knowledge is the connection that enables had to be a But since the eye is not connected with the most and have been precious at only by the connection based on have the force with all illusions.

#### CONSIDERATION

### व्याप्यस्य पक्षवृत्तित्वधीः परामर्श उच्यते ।

68. The knowledge that the concomitant (vyāpya) exists in the subject (pakṣa) is called consideration (parāmarśa).

The knowledge, etc.—The knowledge that apprehends the relation of what is possessed of concomitance to the subject is the cause of inference. It is either the knowledge that the concomitant is in the subject, or the knowledge that the subject has the concomitant. The inference from the former knowledge takes the form that the thing to be inferred is in the subject, and that from the latter knowledge has the form that the subject has the thing to be inferred. Others say that from both binds of consideration the inference takes the form that the subject has the concomitant.

Objection (by the Mimāmsaka): Where even actions the knowledge that the hill has smoke which is a concomitant of fire, there is the perception that the hill has smoke, and then there is the recollection that make is a concomitant of fire, there we notice that different takes place from two distinct judgments. He is a the knowledge that apprehends the relation of

what is possessed of the invariable concomitance? is not always the cause of inference, but the cause must necessarily be the knowledge of (the reason) being an attribute of (i. e. abiding in) the subject?—a knowledge in which the determinant of the concomitanthood (vyāpyatāuacchedaka) is a leature (prakāra); so the assumption of a qualified notion here is cumbrous.

Reply: Not so; for even in the absence of any knowledge\* of the determinant of the concomitanthood, inference takes place from the knowledge that the subject has a concomitant\* of fire; hence, and also for the sake of simplicity, the cause should be the knowledge that the concomitant is an attribute of (abides in) that the invariable concomitance is a feature. Further, inference would take place from the knowledge that the invariable smoke; for there also is the knowledge that the half has smoke; for there also is the knowledge that the road that the road has been attribute of the subject—a knowledge that the road is a feature. It cannot be untelled in which the determinant of the concomitanthesal, the roads.

should be the knowledge that the reason is an attribute of the subject-a knowledge in which the determinant of the concomitanthood, actually being perceived, is a feature; for then inference would take place if Caitra was aware of the invariable concomitance, and Maitra had the knowledge that the reason was present in the subject. If it be urged that the knowledge on the part of a particular person that the reason is an attribute of the subject-a knowledge in which the determinant of the concomitanthood, actually being perceived as such by him, is the cause of the inference made by him, then there will be an endless number of causes and effects. In my explanation, however, the knowledge that the reason is an attribute of the subject-a knowledge which arises by the relation of inherence, and in which the invariable concomitance is a feature, causes the inference by the relation of inherence; hence there are not an endless number of causes and effects. But ii (as you say) the knowledge in which the invariable concerntance is a feature, and the knowledge that the reason is an attribute of the subject, be independent fauses, then there would be two pairs of causes and effects; and inference might take place from the knowledge that smoke is a concomitant of fire, and the hill Las light. Thus, even where there are two judgments, be must assume that they constitute a qualified notion; I f an explanation, though cumbrous, is allowable when it hads to a result.2

to the conditions are an innuite number of persons to make to such that the inference as well as its cause, the condition will be different each time.

### INVARIABLE CONCOMITANCE

### आसिः सायवद्ग्यस्मिशस्वम्य वर्बाह्यः ॥ ६८ ॥

68 (contd.). Invariable concomitance is described as the absence of relation (of the reason) to anything other than what has the thing to be inferred.

A concomitant is the substratum (Assaya) of invariable concomitance. Now it may be asked, what is invariable concomitance? This is being answered: Invariable concomitance, etc. In a proposition like, the thing to be interred; a known etc. are objects naving the thing to be interred; a known etc. are objects naving that thing to be interred; a lake etc. are objects other than those; and smoke is absent in them. Hence the definition is applicable.

anoke, because it has thee, the as freely in the telegrant model of this hill, but a strongly in the telegrant model of the perfect of the telegrant of the telegrant in the telegrant of the tel

mutual non-existence, the counterpositiveness1 of which is characterised2 by the possession of just the thing to be inferred.' Hence, although smoke may be present in a hill, for instance, which is other than any particular object having fire, such as the kitchen, there is no harm.1 The absence of the reason in objects other than those having the thing to be inferred is to be understood in respect of the relation that the reason bears (to the subject). Hence, although smoke is present by the relation of inherence in its parts, which are objects other than those having the thing to be inferred, there is no harm.4 The absence (of the reason) in objects other than those having the thing to be inferred means a non-existence, the counterpositiveness of which is characterised simply by the state of being a presence in objects other than those having the thing to be inferred.5 Hence in the (fallacious) inference, 'It has smoke, because it has hre,' although (hre) is not present in a lake etc., which are objects other than those having the thing to be interred, the definition is not too wide so as to include

An attribute of the counterpositive, viz. what has the thing to be inferred (adhyavat).

69. Or the co-existence of the reason with the thing to be inferred which must not be the counterpositive of any non-existence that may abide in things having the reason, is called invariable concomitance.

It may be urged: When the thing to be inferred is exclusively affirmative (universally present), e. g. knowability, there are no such things as objects other than those having the thing to be inferred. Hence the definition fails to apply there. Moreover, in propositions like, 'It has existence, because it has a generic attribute,' the reason is never known to exist in objects other than those having the thing to be inferred, viz. a generic attribute etc., by the relation that determines the reasonhood, viz. inherence; hence the definition falls short of application. Therefore the text says: Or the co-existence, etc. The co-existence (lit. the state of having the same substratum) of the reason with the thing to be inferred which must not be the counter-

If the thing to be inferred includes the reason, no substratum it the thing to be inferred includes the reason, no substratum it the latter will be without the former. This definition remove, the two defects mentioned above. To illustrate: In the propertion, It is namable, because it is knowable, the reason viz knowability, is co-existent with the thing to be abserted, viz namability—since anything, e. g. a jar, is to the namable and knowable—and namability includes knowability, and it is not absent in anything that has knowability. As on, in the proposition, It has existence, because it has a good to attribute, the thing to be inferred, existence, is not about in anything that has the reason, a generic attribute, the in anything that has the reason, a generic attribute, the in anything that has the reason, a generic attribute, the in anything that has the reason. Hence the look to be inferred is not the counterpositive of the reason, and inclusive of the reason.

stratum, since even such (co-existent) tree and so on, (barticular) smoke and are having the same suburged that the invariable concomitance must be of and hence the definition is too narrow1-it cannot be abiding in the substratum of the reason, e. g. the hill, other places) are the counterpositive of the non-existence it has smoke, particular fires and so on (belonging to proposition like, '(The hill or the like) has fire, because is called invariable concomitance. Here, although in a existence that may be in the substratum of the reason, abide in things having the reason, that is, of any nonpositive of any non-existence (lit. absence) that may

A CONTRACT OF A CONTRACT OF THE STATE OF THE

THE CONTRACT OF THE CONTRACT OF STREET re was a second

substancehood,' the definition fails of application, yet it should be stated that invariable concomitance is the co-existence of the reason with the thing to be inferred, as specified by that determinant of being the thing to be inferred (sādhyatāvacchedaka) which is not the determinant of the counterpositiveness (of the non-existence abiding in the substratum of the reason).

Objection: In a proposition like, 'It has what is possessed of generic attributes concomitant with colour-hood, because it has earthhood,' the determinants of being the thing to be inferred are generic attributes concomitant with colourhood, and these generic attributes, e. g. white-colourhood, are the determinants of the counterpositiveness of the non-existence abiding

of the reason (substancehood) be a jar, there is absence in it of the qualities of a cloth, which, therefore, are the counterpositive of the non-existence abiding in the substratum of the reason. Similarly with regard to the qualities of a jar, if the babstratum of the reason be a cloth. Thus every quality may be shown to be the counterpositive of the non-existence abiding in the substratum of the reason. Yet qualities are co-existent with substancehood, which is the reason.

Thus in the proposition, 'It has fire, because it has amolie,' although there may be the absence of fire as the latchen fire in a hill, it is not absent there as fire. Hence firelied d is not the determinant of the counterpositiveness of the non-existence abiding in the substratum of the reason. Smallarly, in a proposition like, 'It has quality, because it has substratechood,' there is not the absence of quality as quality in the substratum of the reason, but there is the above of it as a particular quality, such as the colour of it. The determinant of the counterpositiveness of that it as allocated, which is the determinant of being the thing to be interest. So the definition is intact.

in a blue jar etc. Hence the definition would fail to apply there.

Reply: Not so. For there it is being a generic attribute concomitant with colourhood that is indirectly the determinant of being the thing to be inferred; and non-existence specified by such qualification is nowhere present in earth. Otherwise it would give rise to the notion that there is no object having generic attributes concomitant with colourhood.\(^1\) Or, as some say, since invariable concomitance varies when the things to be inferred and so on\(^2\) are different, in such a case the definition can be made to fit in by taking it to mean that the determinant of the determinancy of being things to be inferred must not be the determinant of the determinancy of the counterpositiveness (of the thing determinancy of the counterpositiveness (of the non-existence abiding in the substratum of the reason).\(^3\)

The second secon

The substratum of the reason should be taken to mean the substratum of what is possessed of the determinant of the reasonhood. Hence in a proposition like, 'It is a substance, because it has existence possessed of difference from that of qualities and actions,' although substancehood is a counterpositive of the non-existence abiding in the substratum of pure existence, viz. qualities etc., the definition is not too narrow to include this case.¹ Similarly the substratum of the reason should be understood in respect of the relation which is the determinant of the reason-hood. Hence, although fire is the counterpositive of the non-existence abiding in the substratum of smoke in respect of the relation of inherence, viz. in its parts, the definition is not too narrow.²

The non-existence also should be understood as not being co-existent with its counterpositive. So in the proposition, 'It has the conjunction of a monkey,

The above view has been referred to by Jagadiša Turlialankāra in his Siddhānta-Lakṣaṇa. According to Raghunatha Siromani, however, when there are many determinants of being the thing to be inferred, any one of them can be treated as such by an indirect relation.

1 Because the substratum of such qualified existence is satisfactor alone, and there is no absence of substancehood in it.

In a proposition like, 'The hill has fire, because it has make,' the substratum of the reason by the relation of inherance in the parts of smoke. These have no fire, and have the definition might be too narrow. But the substratum of the reason should be taken in the relation of the distribution of the reasonhood, i. e. conjunction. Hence, make the of the parts of smoke, we must take the hill, and that has absence of fire in it. So the definition is intact.

ties etc., also abides in the substratum of the counterchaip are condered to mutanishe off at noisouthoc the definition is too wide, because the non-existence of tion like, 'It has conjunction, because it has existence,' positive, then with regard to a (fallacious) proposiit means absence in the substratum of the counterwithin the limits of its root; it, on the other hand, conjunction of a monkey, is also present in the tree are not the substratum of its counterpositive, viz. the non-existence which is present in qualities etc., which definition is, as before, too narrow, because the same not the substratum of the counterpositive, then the ei daidw ynidames ni oaneence meant annu valida is men off it fail begin of year it "worten oot for ular tree within the limits of its root, the definition is the conjunction of a monkey, which is in that partiemonkey is the counterpositive of that non-existence of because it is this tree," although the conjunction of a

And the second of the second o

positive, viz. substances.<sup>1</sup> This is wrong; because the real meaning is that a non-existence qualified by presence in something that is not the substratum of its counterpositive, abides in the substratum of the reason.<sup>2</sup> To put it in brief, the non-existence must be

<sup>2</sup> So this non-existence is to be discarded. Yet there is no other non-existence of which the thing to be inferred, viz. conjunction, is the counterpositive. Hence, the thing to be inferred not being the counterpositive of any non-existence that is not co-existent with its counterpositive and at the same time chales in the substratum of the reason, the definition of one ly extends there also.

That is to say, the expression 'non-existence that is not co-existent with its counterpositive and at the same time aboles in the substratum of the reason' should mean a non-existence that is qualified by being present in what is not the substratum of its counterpositive and at the same time abides in the substratum of the reason.' Thus understood, the definition is no longer too narrow with regard to the proposition. It has the conjunction of a monkey, because it is this tree. Because in nexistence that is so qualified, e. g. that is nexistance of the conjunction of a monkey which is qualified by being present in qualified, does not abide in this particular tree, for what is qualified by being present in something, is not admitted as being present elsewhere. Hence the above honexistence is not co-existent with its counterpositive.

Nor can the definition wrongly extend to the proposition. It has conjunction, because it has existence. Because by 'things that are not the substratum of the counterpositive of the a nexistence of conjunction' we may take qualities the conjunction being a quality, cannot abide in qualities), and this non-existence of conjunction as qualified by being from the nice abides in qualities, which are also the substratum of the reason. Therefore the thing to be inferred, with a figure of the substratum of the reason. At the same time, that is an Alichante of conjunction which abides in qualities is fact from it authorizes, which are the substratum of con-

proposition like, '(The soul) has knowledge, because it has existence,' although the substratum of existence, viz. a jar or the like, by virtue of being an object, is also the substratum of knowledge, the definition is intact (not too wide).¹ Similarly in a proposition like, 'It has fire, because it has smoke,' although there is the absence of fire by the relation of inherence in the substratum of the smoke (e. g. a hill), the definition is intact (not too narrow).²

Objection: As regards not being the substratum, does it mean that of any one of the counterpositives that are qualified by the determinant of the counterpositiveness? Or that of such counterpositives in general? Or that of what is qualified by any determinant of the counterpositiveness? In the first alternative, in a proposition like, 'It has the conjunction of a monkey, because it is this tree,' the definition is, as before, too narrow; for as 'an object' qualified by the determinant of the counterpositiveness of the nonexistence of the conjunction of a monkey' we also get that conjunction of a monkey which is not present in the tree, and the tree is not its substratum. In the second alternative, there is no such things as a nonexistence that is not co-existence with its counterpositive; for every non-existence is co-existent with that counterpositive which is the negation of itself as

<sup>&</sup>lt;sup>1</sup> Because, although knowledge abides in existence etc. by the relation of objecthood, it never does so by the relation of inherence, which is the relation determining the state or hong the thing to be inferred.

<sup>\*</sup> Because the relation determining the state of being the talk; to be inferred is conjunction, and not inherence.

<sup>\*</sup> Viz. the conjunction of a monkey.

pergues if has the non-existence of the others it togon to omists) non our sru H. 'org nonsodord r a lar etc. is a distinct entity, even then with regard to to outstate or itse or the old out as a state to sometime to positive will always be mantage. If it he sent that the a non-existence that is not co existent with its counterand a hill or the like is its substratum. In this manner also is a counterpositive of the non-existence of a jar, identical with the non-existence of a jar; hence fire and ei ret a to constance and a jar is but counterpositive is futile. For that non-existence of eti illin tuot-ixo to ton ei tealt oonoleixo-non e en and therefore the statement that there is no such thing total the substratum of the counterpositive in question; the thing to be interred, the hill or the like is certainly respect of the relations determining the state of being possessed of presence in the preceding moment, yet in existence of a jar etc. which is the negation of itself as is the substratum of that counterpositive of the non-It has fire, because it has smoke,' the hill or the like cannot be urged that although in a proposition like, possessed of presence in the preceding moment.' It

And the contract of the contra

<sup>\*\*\*\*\*\*\*\*</sup> 

<sup>2.</sup> The second control of the cont

will be too narrow. For there the relation determining the state of being the thing to be inferred is selfsameness (svarūpa), and in respect of that relation the substratum of the reason is also the substratum of that counterpositive of every non-existence which is the negation of itself as possessed of presence in the preceding moment. In the third alternative, in a proposition like, 'It has the non-existence of the conjunction of a monkey, because it is the soul,' the definition would be tco narrow; for there the negation of that non-existence of the conjunction of a monkey which is1 in the soul is the conjunction of a monkey, and this being a quality, the determinant of the counterpositiveness may also<sup>2</sup> be the state of being the absence of qualities in general, and the substratum of the reason, viz. the soul, is not the substratum of what is determined by that (determinant).

Reply: Not so; for the meaning (of the expression 'not a counterpositive') is that (the determinant of the state of being the thing to be inferred) is not the determinant of that kind of counterpositiveness, the

<sup>1</sup> Because the soul is omnipresent.

One counterpositive is the absence of the conjunction of a monkey. But since the conjunction of a monkey is a quality, the absence of qualities in general may as well be abother. So the determinant of the counterpositiveness of the regation of the absence of the conjunction of a monkey is the state of being the absence of qualities in general. Hence the negation of the absence of the conjunction of a monkey is not co-existent with its counterpositive. Its counterpositive is the absence of the conjunction of a monkey, which is the thing to be inferred. Hence the definition is the further.

present in the thing possessed of the reason." objects qualified by the determinant of which are not

of its counterpositive by the same relation as that of universe, every non-existence abides in the sub-tratum the reason, viz. infinite time, is the substratum of the with its counterpositive; for since the substratum of no such thing as a non-existence that is not co-existent of a jar, because it has temporal dimension, there is Objection: In the proposition, 'Time is possessed

interred, viz. temporal qualification. ed of guidt out gained to state out to inanimisted out

of that non-existence which abide, in that sale, training must understand that only when all counterpolations in an Andreice from itself. But, stretty sparshib off infinite time, because even in infinite time there is not the container of a jar possissed of difference them although infinite time is the container of a jar, it is not time is not co-existent with its counterpo-nive; for existence of a jar as qualified by difference from infinite Reply: According to some, in this case the non-

्राप्त के अने के राज्य के प्राप्त के समित के स and the second of the second o The control of the second section of the second section of

positive of non-existence, by the relation determining the counterpositiveness, possesses the *twofold* non-existence of the state of being qualified by a particular attribute (determining the state of being the thing to be inferred) and the state of being qualified by a particular relation (determining the same), the object characterised by that attribute is inclusive (*vyāpaka*) of that reason in that particular relation.<sup>1</sup> Thus in a

In a fallacy, the thing to be inferred, as qualified by the attribute and the relation determining its state as such, must be wanting in some substratum of the reason. So there the counterpositiveness of the non-existence abiding in the substratum of the reason must be qualified by both the attribute and the relation determining the state of being the thing to be inferred. Hence these two qualifications never being jointly absent, the definition is not too wide. But in a valid proposition, no substratum of the reason is wanting in the thing to be inferred possessing the above double qualification. Therefore the counterpositiveness of the non-existence abiding in the substratum of the reason ever lacks the above two qualifications.

In a fallacious proposition like, 'It has smoke, because it has fire' the attribute determining the state of being the thing to be inferred (smoke) is smokehood, and the relation determining it is conjunction. Now a red-hot ball of iron has hire (which is the reason), but no smoke. That is, there is the non-existence of smoke in it, of which the counterpositive is smoke, and the relation determining the counterpositiveness is conjunction. In this counterpositiveness there are both smokehood and conjunction. Hence, there being no absence of the two together, the definition does not wrongly extend to it

In a valid proposition like, 'It has fire, because it has am hat,' there being no absence of fire, through the relation

proposition like, 'Time is possessed of a jar, because it has temporal dimension,' it is the non-existence of the jar through the relation of conjunction that is present in the substratum of the reason, viz. infinite of the non-existence of the jar through the relation of of the non-existence of the jar through the relation of of that possesses the twofold non-existence of the state of being determined by jarbood and the state of being determined by the temporal relation, the definition is determined by the temporal relation, the definition is not too narrow.

Objection: In a proposition like, 'It has the knowable fire, because it has smoke,' there is no such thing as being determined by the state of being knowable fire; for a cumbrous attribute cannot be the determinant.

Taple 2 for 50 to 50 to

# SUBJECTHOOD

# सिपाधियया भून्या सिद्धियंत्र न तिष्ठति । स पद्मः, तत्र वृत्तित्वज्ञानाद्नुमितिभवेत्॥ ७०॥

70. A subject (paksa) is that in which there is no certainty (of the thing to be inferred) bereft of the desire to infer (the same). Inference takes place from the knowledge of the existence (of the

With regard to 'existence in the subject," what is meant by subjecthood (pakṣatā)? This is being reason) in that. explained: A subject, etc. Subjecthood (the condition of being a subject) is the absence of certainty berest of the desire to infer, and a subject is what possusses that; this is the meaning. Simply the desire to infer does not constitute subjecthood; for even without that desire one infers a cloud from its rumbling. Hence even a doubt about (the presence of) the thing to be inferred is not subjecthood; for even without this doubt it is inferred. Even if there is certainty (about the thing to be inferred), inference does take place if there is the desire to infer. Hence the quali-Mearion of certainty by an absence of the desire to infer. Thus, where there is no certainty, there is subjecthood, whether there is or is not the desire to infer. Where there is the desire to infer, there is subjecthood, whether certainty is there or not. Where there is certainty, Let not the desire to infer, there is no subjecthood; for there we have certainty bereft of the desire to infer-

a Referred to in verse 65.

Reply: Not so. Where there is either the percertainty by an absence of the desire to infer? simultaneously known. So why is the qualification of qualities of the omnipresent substances cannot be time of consideration; for the perceptible special desire to infer either at the time of certainty or at the tion. Similarly, in other cases also, there is not the very desire to infer is absent at the time of consideradesire to infer, certainty and consideration, there the the absence of any obstacle. Where there are the desire to infer, inference takes place owing simply to order, there, certainty being gone at the time of the certainty, consideration and the desire to infer come in is gone! at the time of the desire to infer. Where infer, there will be no inference, since the consideration marsa) there comes certainty, and then the desire to Objection: Where after consideration (para-

a concomitant of fire, has fire, and then there is smoke, a concomitant of fire, has fire, and then there is the desire to infer, there the qualiteration in question is desire to infer, there the qualiteration in question is necessary to bring about the subjecthood. Here it should be understood that the subjecthood of an inference from a particular sign is that absence of creating bereft of the desire to infer, which exited the fact of the desire to infer and such extrainty and consideration. Thus when the consideration in the fact of the desire from that particular sign interested from that particular sign. Thus when

The second of th

some sort of knowledge.'1 But it does take place when there is the perception, 'The hill which has smoke, a concomitant of fire, has fire,' and along with it there is the desire, 'Let there be some other knowledge than perception.'2 Similarly, when there is consideration regarding smoke, inference does not take place even if there is the desire, 'Let me infer fire through light.'3 In a particular inference, that kind of certainty should be specifically mentioned as an obstacle, the presence of which during the absence of a desire to infer thwarts that inference. Hence, even if there is the knowledge, 'The hill has heat, the rocky thing has fire,' inference is not counteracted.4 But since we see that even if there is certainty of the thing to be inferred being in a substratums of the determinant of the subjecthood, inference takes place in subjects qualified by that determinant, we must say that with regard to inference in subjects qualified by the determinant of the subjecthood, it is the certainty of the thing to be inferred in subjects qualified by the determinant of the subject-

<sup>1</sup> Because the desire necessary for the purpose is, 'Let there be knowledge of the presence of the thing to be inferred in the subject.'

Perception is much easier than inference. Therefore in a competition between the two regarding an identical object, perception prevails when the conditions of it are present. Hence the qualification. The presence of the desire for inference together with consideration will lead to inference in the of the conditions of perception being present.

Because there is no consideration about light, and no

desire about inferring through smoke.

It would be if there were the certainty that the hill

E. g. a particular hill.

subjects in general, e. g. all hills.

cplecti processes is an observe to the perception of a dimensi of the conditions of inference, ben'tt of the deare to place unless there is the desire to perceive, the produce add ten each lot toldue a to notiquory notiatoble a lovely noman (in sight).2 Similarly, since after condependently? an obstacle, as is the desire to linow about identical object, bereft of the desire to infer, is inpresence of the conditions of perception regarding an manhood takes place, but not inference. Hence the there, in the absence of a desire to infer, perception of has hands etc., which are concomitants of manhood, this is a man or not, one has the knowledge that this borne in mind: Where, after a doubt as to whether that is the obstacle. One thing, however, should be by the certainty, of the thing to be inferred same substratum as the determinant of the subjecthood, in a subject in which the thing to be inferred has the hood that is the obstacle. But with regard to inference

#### ह संभागता सम्माति । । क्षत्रीक्षणेष्ठ वस्मात्री वस्त्री ।

Fire Finding Commence and the second

In connection with dealing with the reason, the fallacies are being divided: The fallacies, etc. The definition of a fallacy is that it is that, having which as its object a particular knowledge thwarts inference (or its cause). To explain: Since a particular knowledge thwarts inference by having inconstancy etc. as its object, these are defects. The expression 'that possessing which' means 'that kind of real entity,2 possessing which.' Hence, although a mistaken notion of incongruity may thwart inference, the definition is not too wide. Since the notion, 'The hill has the absence of fire,' is unknown as a fact, there is no defect in the reason. It cannot be urged that at the time of the consideration, 'It has rockiness, which is a concomitant of the non-existence of fire,' the smoke, which is a concomitant of fire, is not a fallacy, since in this case the subject having a concomitant of the absence of fire is unknown as a fact. For this is a thing we accept. Otherwise incongruity also would be a transitory defect.3 Therefore, in the instance cited, at the time of the consideration, 'It has rockiness, which is a concomitant of the absence of fire,' the smoke, which is a concomitant of fire, is not fallacious. The inference is only obstructed owing to an error, but the reason is not defective. Similarly a reason being present where the thing to be inferred is absent, and so on,4 is a

<sup>&</sup>lt;sup>1</sup> That is, the knowledge of which thwarts inference.

That is to say, not simply the object of the knowledge in question, but the object together with its qualification must be taken into account.

When one has an erroneous notion of it.

<sup>\*</sup> Refers to a subject being without the thing to be

defect; and the reason may have it by any relation whatsoever. This is the view of the new school.

, sanaharan, ci arana the reason . In the other case, it is never and that the er probablish countries and only of the establishment counterbalance it is so considered, as is evident from to any out at another the the case of collected the same) cognition. Recause there is antion in Line (the absence of the by the relation of (sink line) tal oot it en groonzynoom en besieb od blion meast the ablence of the thing to be intered, even a suite in the subject thrunts inherence by harmy for its object because it has smoke,' a mistaka notion of incentituity urged that since in a proposition bke, 'It has fire, (being an object of the same) regintion 1. It cannot be is a delect; and the reason has it by the relation of opposing invariable concomitance, for example, which inference. In the case of counterbalance, it is the which as an object a particular knowledge thwarts being fallacious consists in its poesessing that, having Offices, however, maintain that the fact of a reason

definition is not too narrow to include the inconstant reason. The knowledge of a defect with regard to a particular reason is an obstacle to the inference that is based on that reason. Hence, where one reason is known to be inconstant, inference takes place from some other reason, and as the knowledge of the inconstancy does not comprehend the absence of what is a feature in the inference or in its cause, etc., it does not thwart inference (or its cause); nevertheless the definition is intact (not too narrow). This is the gist of it.

#### VARIETIES OF FALLACY DEFINED ACCORDING TO THE NEW SCHOOL

#### आद्यः साधारणस्तु स्यात्, असाधारणकोऽपरः । तथैवानुपसंहारी, त्रिधाऽनैकान्तिको भवेत् ॥ ७२ ॥

72. The inconstant reason is of three kinds: The first is styled common, the second uncommon and the third inconclusive.

A fallacy is any one of the total number of defects in a reason connected with a particular thing to be inferred or subject. The mention of five classes is simply in view of possible instances of them.

Some editions read harana (instrument) instead of hārana (cause). The 'instrument' is the knowledge of invariable concomitance.

<sup>1</sup> That is, a qualification of their object.

<sup>2</sup> Here an alternative definition of fallacy is given to include hypothetical cases of inference.

Where all the five defects may occur, as in the proposition, 'The air has smell, because it has oiliness,'

latified a minimizer to the contraction of interesting name ou de spiede ad sub de anne di un ebaute enfl promptive an impropriate interdirector of the st Percent in a d. Ibrardin od ed. to the first of the second of

of the absence of the thing to be inferred (in the subject). In the case of a counterbalanced reason, the rival reason serves to establish the absence of the thing to be inferred, while here the reason is only one. This is the difference. Another point of difference is that it betrays a special incapacity in that what is calculated to establish the absence of the thing to be inferred is here put forward as that intended to establish the thing to be inferred.

The counterbalanced reason is where the subject has a concomitant of the non-existence of the thing to be inferred. Others say that it is the object of a notion, not known to be invalid, that (the subject) has a concomitant of the non-existence of the thing to be inferred, at the time that one has a notion, not known to be invalid, that the subject in question has a concomitant of the thing to be inferred. Here obstruction to inference results from the knowledge that the subject of each proposition has a concomitant of the non-existence of the thing to be inferred, relating to the other proposition.

Regarding this some<sup>2</sup> say: As, in spite of the knowledge that the subject has a concomitant of the non-existence of a jar, one has the notion that the subject has the jar, when there is conjunction of the eye and the jar, and as in spite of the knowledge that a conch has conchhood, which is a concomitant of the non-existence of yellow-colourhood, one has the notion that the conch is yellow, if there is some defect such as

Consideration is meant.

<sup>2</sup> The reference is to the author of the Rainakoša.

an excess of bile, so in spite of the cognition of concomitants of the two alternatives, there arises a doubt in the form of a (mental) perception of the two alternatives. Similarly, in the case of the counterbalanced reason, inference does take place in the form of a doubt. Where, however, there is the cognition of a concomitant of only one alternative, there, owing to its being of greater strength, the cognition of the second afternative is obstructed, and hence no doubt arises the postersion of greater or equal strength being assumed in the light of the result.

different kind of obstruction has to be assumed for a particular spontaneous perception and for verbal comprehension, because it would be cumbrous. So there being an obstacle, how can inference take place (even in the case of a counterbalanced reason)? Unlike the perception that takes place when there is normal connection (between the organ and object), the inference, in the form of a doubt, that is supposed to take place in the case of a counterbalanced reason is not attested by proof; were it so, the qualifying phrase 'other than an inference' would also be necessary.3 Where there is the knowledge that (the subject) in both the alternatives has a concomitant (of the thing to be inferred), there doubt arises from the notion of both lacking validity, not otherwise; for the rival notion is an obstacle only when its invalidity has not been known.

The unfoundedness (asiddhi) of reason is being any one of the group beginning with unfoundedness of the substratum. Unfoundedness of the substratum is the absence of the determinant of the subjecthood in the subject. Where one is to infer, 'The hill made of gold has fire,' there, if one has the knowledge, 'The hill is not made of gold,' it results in the obstruction of consideration with regard to the hill made of gold. Unfoundedness of nature is the absence of what is considered to be a concomitant' (i. e. the reason) in the subject. There, as in a proposition like, 'The lake

I In addition to the qualifying phrase 'not produced by altitud connection or particular defects,' mentioned above.

<sup>2</sup> To the description of the obstacle.

<sup>.</sup> Of the thing to be inferred.

For particular to the specific professions the engineering Problems of the period of the particular and the expense 新的人名 人名英格兰人姓氏格特特 (1975) (1975 न्त्राम देश जात्र प्रयासाद एष्ट्र स्व । न्यूना शास्त्रीना more that it around editions of high little abott of sub-र प्राप्त विकास हो है। या का का का का प्राप्त का का विकास वाल may a military for the fee of the end and another नव १००४ । इस है। पर वै ४ अब अहा के अनुभावता गर्मक २७७२ हें उन्हें के हुए हैं है। हुए हैं के लेगा मा अनुसार प्राप्त है के अगानत that had but not to had a decident on so are very off in foother, it off to be matrix of to our di with the meaning the employment of the meaning of the रत् वर रेपापा ल्या रेपाल् १० अन्यः अस १० अध्वयमञ्जू self to be a set or teal borroka set of Enial self to viz, the knowledge that the subject has the concominate me made of gold,' in the obstruction of confideration, ted (flid off), told noth organic in tellison it rocine splicated side and War borrolai of or gaids off ai (talchadasachterible) borrdni od of gnift off guid fo where of the ablence of the definition of the state ed of Enith with to combound in this thing to be included in unfoundedness of concernituation in babulant ness of the thing to be inferred and the real are a concomitant of the thing to be interred. Unfoundedti doing notest off ead tooldus off tadt ogbolyonal off subject, it leads to the obstruction of consideration, vix. soft in trasde ei (borrolni od of gnidt off do) inclimos known that the reason which is considered to be a cenis a substance, because it has smoke," if it is already Incongruity (bādha) is the absence of the thing to be inferred in the subject, and so on. It results in the obstruction of inference, because the certainty of the absence of something (the thing to be inferred) with regard to a particular entity? (the subject) thwarts all knowledge of that something relating to that entity, provided the knowledge is not produced by normal sense-contact or some particular defect. Regarding this some hold that the knowledge, which includes doubt, of the subject being related to the thing to be inferred is the cause of inference, and incongruity and the counterbalanced reason are fallacies, because they thwart this knowledge. This is wrong; for then no inference would take place in cases where the thing to be inferred is not known to exist outside the subject;

<sup>1</sup> Refers to the same idea expressed in another way.

<sup>&</sup>lt;sup>2</sup> Diarram. In the proposition, 'The ground holds a jur,' the ground is the dharmin or visesya (substantive).

<sup>&</sup>lt;sup>2</sup> If a person knows that the ground holds no jar, he cannot have the opposite notion, unless it is a case of perceptica involving sense-contact. Again if he knows that a conch is white, he cannot regard it as yellow, unless he is suffering from jaundice. 'Knowledge' includes doubt.

<sup>4</sup> The inference taking the form, 'The subject has the infunction of the thing to be inferred,' and not, 'The subject has the thing to be inferred,' as is usual.

Exclusively negative inference is meant. In the prois althon, "Earth is different from other things, because it is tarth," the thing to be inferred, viz. difference from other things, is not known to exist outside of earth, which is the subject, and there its presence is under dispute. Hence, there being no previous knowledge of the thing to be inferred although in the subject, inference, according to this view.

and it does take place even when there is no doubt regarding the thing to be interred (being in the subject), and so on. Lamilarly the judgment that the knowledge of the absence of the thing to be interred (in the subject) is valid knowledge, is also not an obstacle (to interred); for it is unwarranted and counterbalanced interred); for it is unwarranted and counterbalanced concomitant of the negation of a particular thing to be concomitant of the negation of a particular thing to be interred, being valid knowledge of (the subject) having a number oncomitant of the negation of a particular thing to be obstacle. But it is the notion of incontinity etc., not handicapped by the idea of as being that is the obstacle. In this matter, then the obstacle. In this matter, the notion of validity is sentitines helpful by may of removing the doubt alsociatements.

It cannot be anged that in a case of incomparing the cannot be anged that in a case of the fall of the cantom be a district, the thate of the cantom define of the cantom beauty and in the case of the thate of the cantom beauty and in the cantom bare in a district of the cantom beauty and in the case of the cantom bare in a cantom beauty of the cantom bare in a cantom bare in a

there is the notion of incongruity,2 there, the notion of inconstancy or the like being useless,2 incongruity alone should be held as thwarting inference. Similarly, where there is the notion of the presence of earthhood, which is a concomitant of smell, in a jar or the like at the moment of its origin, there incongruity alone should be considered to be the obstacle. It cannot be questioned how, smell being present in the subject, viz. the jar, it can be a case of incongruity; for it is a matter of experience that inference takes place as associated with the space and time that are the determinants of the subjecthood.3 The concomitants of fallacies' other than incongruity and its concomitant (the counterbalanced reason) are just included in them.5 Otherwise there would be another fallacy. The counterbalanced reason, which is a concomitant of incongruity. is to be treated as a distinct fallacy, since the saint," who is of independent will, has made a separate mention of it. That the concomitant of the counterbalanced reason is not an obstacle (to inference) is, however, a tiling that goes without saying.

I. I. g 'The lake has the absence of fire.'

<sup>\*</sup>Browns it can stay the notion of invariable con-

In the above instance, the moment of origin is that cort of time. And according to the assumption of the logicular, a jurillar to smell at that moment. Hence it is clearly a case of incongraity.

THE FALLACIES DEFINED ACCORDING

#### वस्त्रवस्ताङ्गाङ्कः स चासावारवास् सः ॥ वर् ॥ वः सर्वर्ध विवर्ध च मवस्यावारवास्य सः ।

73. That which abides both in similar instances (sapakṣa) and contrary instances (vipakṣa) is the common reason; while that which is absent from both is considered to be the uncommon reason.

That which, etc.—That is to say, the reason that is present in both similar instances (sapakya) and contrary instances (sapakya) is called common. A similar instance (sapakya) is what indubitably has the thing to be interred. A contrary instance (wipakya) is what is other than what has the thing to be interred. The mention of similar instances is to exclude the centradictory reason. Strictly speaking, presence in a strainty instances should alone be mentioned; for a natary instances should alone be mentioned; for a transity instances should alone be mentioned; for a common which the centradictory reason is also a common attach, yet it is distinct from the latter, as the ground the contract from the latter, as the ground of it, followers, is distinct from the latter, as the ground of it, followers, is distinct than the latter, as the ground of it, followers, is distinct than the latter.

While that, see alread is to say, absent from while the say, absent from a white instance (entable) is an action of the same contrary instance (entable) is what is described in mount to be preserved of the thing to be a tested with the best in the same (eithely) is what is a tested of the thing to be detected of the thing to be absently beautifulated of the thing to be a found. See a substitute of the same is the same is dead to the absent the same is dead to the absence it is a same in the same is dead to the absence in the same is dead to the same in the same is dead to the same in the same is dead to the same in the same in the same in the same is dead to the same in the same

of transitoriness in sound, then a jar or the like¹ constitutes a similar instance,² as also a contrary instance,³ and soundhood is other than that; hence it is an uncommon inconstant reason. When, however, there is certainty of transitoriness in sound, then it is no longer such. This is the view of the old school. The view of the new school has already⁴ been stated.

#### तयेंवानुपसंहारी केवलान्वयिपक्षकः । यः साध्यवति नेवास्ति स विरुद्ध उदाहृतः ॥ ७४ ॥

74. That of which the subject is exclusively affirmative is the inconclusive reason. That which is never present in what is possessed of the thing to be inferred (the subject) is called the contradictory reason.

That, of which, etc.—Since in a proposition like, 'All is namable, because it has knowability,' everything is a subject, there is no other instance for the notion of co-existence (of the reason and the thing to be inferred), and hence no inference can take place. This, however, is not correct; for even if there is the notion of co-existence in a portion of the subject, the definition is intact. Or, let there be no knowledge of co-existence; even this much only constitutes unfoundedness in the form of ignorance (of co-existence);

<sup>2</sup> Refers to jarhood, for instance.

Because a jar is certainly transitory.

This portion applies to what is denoted by the words or the like. Jarhood is a contrary instance, because, being a genuric attribute, it is obviously eternal.

<sup>•</sup> On p. 133.

<sup>5</sup> E. g. a jar.

but it cannot be classed as a fallacy. Yet inconcluciveness consists in the reason having a thing to be inferred that is exclusively affirmative. This has already been mentioned.<sup>1</sup>

That which is, etc.—The intensive particle cua indicates the absence of the reason in everything that is possessed of the thing to be inferred. So contradictoriness means: being the counterpositive of the non-existence that includes the thing to be interred.

#### । धन्त्रज्ञीसीएक्स, नाम् । धन्त्रज्ञीसील्या ॥ १७ ॥ धन्त्रोक्त्रज्ञीसीकृष्ट (१४००)

75. The first is unfoundedness of the substitution, then comes unfoundedness of concomitant and the third is unfoundedness is of three limits.

#### व्याप्यत्वासिद्धिरपरा नीलधूमादिके भवेत्। विरुद्धयोः परामर्शे हेत्वोः सत्प्रतिपक्षता॥ ७७॥

77. The third, viz. unfoundedness of concomitanthood, occurs where the reason is blue smoke etc. When two opposite things occur in the consideration, the two reasons are said to be counterbalanced.

Blue smoke, etc.—Blue-smokehood and so on cannot be the determinant of the reasonhood, since it is cumbrous; for the determinant of the concomitant-hood must be one, of which no other determining attribute of concomitanthood, co-existing with a particular attribute, is a component factor. The phrase co-existing with a particular attribute is added in order to include the state of being the previous non-existence of smoke?

<sup>&</sup>lt;sup>1</sup> That is, the thing to be inferred and its negation.

<sup>2</sup> The concomitant is the reason.

<sup>&</sup>lt;sup>3</sup> E. g. smokehood. <sup>4</sup> E. g. blue-smokehood.

Unlike the Mimamsakas, the logicians believe in the frevious non-existence of that alone which will take place sublequently. So they may infer: 'This place will have fire, the cleterminant of the reasonhood is the state of being the provious non-existence of smoke.' Here the determinant of the reasonhood. This has for its component factor another attribute (viz. smokehood) which is a determinant of the reasonhood. But the two are not co-existent, to have smokehood abides in smoke, which is a positive matry, while the other abides in the previous non-existence of make. Hence the attribute 'the state of being the previous hour alliques of smoke,' although cumbrous, can be to be firstly at the determinant of the reasonhood.

When, etc.—Even when there is the consideration that comething (e. g. a particular treet possesses the concountants (vyäyya) of both conjunction with a monkey and its negation, it is not a case of the counterbalanced reason. Hence the text says: The opposite things. So the meaning is that the counterbalanced teason is the object of the consideration that the subject possesses a concomitant of the thing to be interred? (from a certain reason), at the time of the consideration that the subject possesses a concomitant of the third from a certain reason.

Sr. The knowledge of words is the instrument (of verbal comprehension), the knowledge (recollection) of the meaning of words is the operation there, verbal comprehension is the result, and the knowledge of denotative function (śakti) is an aid.

The manner in which verbal comprehension takes place is being shown: The knowledge of words, etc. It is not that words actually being known are the instrument of it; for we have verbal comprehension even in the absence of words (uttered), as in the case of a man under the vow of silence mentally reciting a verse, and so on.1 The knowledge of the meaning of words, etc. -The recollection of the meaning of words produced by those words is the operation. Otherwise a man who has a knowledge of words would have verbal comprehension even when he has a knowledge of the thing denoted by the words, through perception etc. Even there the recollection should be understood as being produced by words through their significatory function (vṛtti). Otherwise, when words like 'jar' have given rise to a recollection of ether through the relation of inherence, ether too would become an object of verbal

<sup>&</sup>lt;sup>1</sup> Refers to the conveying of ideas through gestures or writing.

 statement, paraphrase and the contiguity of a wellknown word.' The denotative function of verbal roots and augments and so on is apprehended from grammar. Sometimes when there is a contradiction, it is discarded. For instance, grammarians say that the denotative function of the tenfold verbal suffix is regarding the agent. In sentences like, 'Caitra is cooking,' Caitra is to be identified with the agent of the action; but since this is cumbrous, it is discarded. Instead, for simplicity, denotative function is taken to be with regard to effort (kṛti), which is apprehended as a feature of Caitra etc.1 It cannot be urged that as the agent is not expressed (by the verbal suffix), words such as 'Caitra' should take the third (instrumental) case-ending, because it depends on the absence of any expression of the number of the agent.2 And only things that are not circumscribed by being objects (karmatva) etc., and are represented by words taking the first (nominative) case-ending, are capable of having their number expressed. The meaning of the clause, 'That are not,' etc. is that the things in question must not be apprehended as referring to what is a description of something else. Hence in sentences like, 'Maitra goes like Caitra,' the number (indicated by the verbal suffix) is not connected with Caitra.3 To preclude cases where the things in question, as objects of an action and so forth, are not meant to be (solely) a description,4 the

<sup>&</sup>lt;sup>1</sup> That is, it signifies that Caitra is possessed of the effort.

<sup>2</sup> By the verbal suffix.

<sup>&</sup>lt;sup>2</sup> Because 'like Cuitra' is a description of Maitra.

In rentries the tractaling a little, the brothing a little, centences like, "Maiten goes like Caites," Caites etc. are nia said denoted by the root of the verb. Hence in question are not a description of anything et e besides Or the meaning of the first pertion is that the things in words, 'And are represented,' etc. have been aced. colour alone, while by implication they refer to what is possessed of blue and other colours. Likewise from the statement of trustworthy persons also (denotative function is known). As, from the statement, 'The word pika signifies a cuckoo,' we get the denotative function of words such as pika.

Similarly from usage also it is apprehended. For instance, an elderly person giving directions says, 'Bring a jar,' and hearing this another elderly person who is called upon to do so brings the jar. Reflecting on this, a boy who stood near concludes that the act of bringing a jar is the result of the words, 'Bring the jar.' Then in expressions like, 'Remove the jar,' and 'Bring the cow,' he understands by a process of inclusion and exclusion that the denotative function of words such as 'jar' is with regard to the jar etc. as connected with certain acts.1 Thus, according to some,2 expressions like, 'There is a blue jar on the ground,' lead to no verbal comprehension. To be explicit: Since words such as 'a jar' have been concluded to have the power of denoting a jar etc. as connected with certain acts, and since only vidhilin and other suffixes have the power to convey activity, there will be no verbal comprehension, as they are lacking (in this case). This is wrong. For although one may at first conclude that denotative function (of words such as 'jar') is with regard to a jar etc. as connected with certain acts, one should afterwards discard this notion (of connection with acts) for the sake of simplicity. Hence, when

The view of the Prabhakara school of Mimamsakas. Then with experience the boy finds out the true denotative function of the word 'jar.'

function; for it is cumbrous to assume multiple denotative function. In words like hari,1 however, since there is no decisive reasoning one way or the other, we have to assume multiple denotative function. Similarly from paraphrase also we apprehend denotative function. Paraphrase is a statement of the meaning of a word through a synonym. For instance, the sentence, 'There is a jar,' is paraphrased by the sentence, 'There is a pitcher'; hence the word 'jar' is known to denote a pitcher. Similarly the word 'cooks' is paraphrased by the words 'does the cooking'; from this we conclude that the verbal suffix there denotes effort. Likewise from the contiguity of a well-known word also denotative function is apprehended. As, in a sentence like, 'A pika is singing sweetly in this mango tree,' the denotative function of the word pika is apprehended to be with regard to a cuckoo.

Regarding this some<sup>2</sup> say that denotative function is with regard to the generic attribute, and not to the individual, because in that case there would be inconstancy,<sup>2</sup> and denotative function would be infinite in number.<sup>4</sup> And since a generic attribute cannot be known apart from individuals, the latter also become known. This is wrong; for without denotative function there can be no knowledge of individuals.<sup>5</sup> Nor is the individual known by implication; for we know an

thing denoted by the denotative function of the word, it only means cumbrousness for your view. Hence, since the cognition of particular individuals possessed of particular generic attributes and forms cannot be explained (in your view), the denotative function assumed for this purpose turns out ultimately to be with regard to the individual possessed of a particular generic attribute and form.<sup>1</sup>

#### Varieties of Words Possessing Denotative Function

What possesses denotative function is the word. It is of four kinds. Sometimes it is derivative (yaugika), sometimes conventional (rūḍha), sometimes derivatively conventional (yoga-rūḍha) and sometimes both derivative and conventional (yaugika-rūḍha). For instance, where only the meaning of the component part² of a word is understood, it is derivative; as words like pācaka (cook). Where, irrespective of the denotative function of the component parts, it is understood only through its collective denotative function, it is called conventional; as, words like go (cow) or maṇḍala (circle). Where, however, in the object denoted by the denotative function of the component parts of a word there is also collective denotative function, it is derivatively conventional; as, words like

The generic attribute cowhood, being of the class that is expressed, cannot be spontaneously known. So its cognition must be accounted for in some other way. But if denotably function is with regard to the individual, then the generic attribute cowhood is unexpressed, and therefore its regarition is spontaneous.

The root and the prefix or suffix.

Marke the first section of the second section of the section of th the term of the state of the state of the state of the state of the protection of the state of port to the grown on the production of the consequence of the conseque A Committee of the comm रक्षा प्राप्त कराव । इतरा १५० इ. एवं समाप्त अनुसार पुरु । १३५ memoral to the transport of the transport of the texture en e a abro di septia enplação enplação di specificação d emine a gradium moral ombretto en applico tali देवारे, एक्ट - राज्या वा ए क्षमा वा व्यवस्था सामान ministrates of the property of the confidence of In the area of the figure of the color (the statement that a statement in a particular state of the statement of ्राह्म । १९ १ वर्ष वर्ष १० १ वर्ष । स्था असम् असम् अस्ता । अस्ता ११ वर्ष अभूता एक अपूर्व वेदाना के वेदार है। सामानाम कृत्यानमा नेदा नेदानुहर will stall the mentage of or amount a famous haveit what grows in much. such as trees and shrubs, as also a particular kind of sacrifice.

IMPLICATION: ITS VARIETIES

## लक्षणा शक्यसंवन्धस्तात्पर्यानुपपत्तितः।

82. Implication is the relation with what is denoted by denotative function, where the intention (of the speaker) is not (directly) compatible.

Implication, etc .- In sentences like, 'There is a cowherd colony in the Ganges,' a cowherd colony is not compatible, either as regards relation or as regards intention, with the primary meaning of the word 'Ganges,' which is a stream. Where this is noticed, there the bank is understood by implication; and this is a kind of relation to the primary meaning (of a word). For instance, since the relation of the primary meaning, viz. a stream, is apprehended with the bank, the latter is recalled; this leads to verbal comprehension. But if the incompatibility of relation be the essence of implication, then in the sentence, 'Admit the sticks,' there would be no implication; for there is nothing incompatible in sticks being related to admission. Therefore, since the intention of the speaker, viz. feeding, is not compatible with the admission of sticks, the implication is with regard to persons carrying sticks. Similarly in sentences like, 'Protect the curd from the crows,' the word 'crows' implies any creature that would spoil the curd; for the intention of the speaker is about protecting the curd from all creatures. Likewise in sentences like, 'The men with

The state of the s the second and the property of the second of the The first of the foreign to the total property of the content en and the second and the top of the second strong to the strong property of the st the state of the special of the state of the special of the specia n de a fait tachtar mere old equa suitable a collection Entering month to easy or million, only one brought man so it is the character of the state of their states of the deal of the states of the s the takes there in that bein that the early sold not and made and assured all to sinulated of make of in arrayod. Principle of the second second

Where, however, the primary meaning of a word is implied by an indirect relation, it is called double implication (lakṣita-lakṣaṇā). As, for instance, in words like dvirepha (bee). The relation of the two r's is apprehended with the word bhramara, and that of the latter with a bee; hence it is a case of double implication. But the word1 that bears the implied meaning does not lead to (verbal) comprehension; it is some other term<sup>2</sup> that leads to the verbal comprehension of the implied meaning. For words3 have been ascertained to have the power of generating verbal comprehension of their primary meaning, as connected with the meaning of some other word4 by the relation of either denotative function or implication.<sup>5</sup> [This is the view of the old school. The new school, however, maintains that it also is certainly a cause of (verbal) comprehension, and the apprehension of the meaning

between the two, neither the determinant of the state of being the thing implied nor that of the state of being the thing directly conveyed can be admitted as possessing implication or denotative function, as the case may be. If the bank (of the Ganges) be the thing implied, it is known as possessed of bankhood, which is the determinant of the state of being the thing implied. For this it is not necessary to admit a separate implication. Similarly, where the word 'cow' signifies an individual cow, the latter is directly apprehended as possessed of cowhood. Hence there is no necessity for admitting a separate denotative function with regard to cowheed.

<sup>&</sup>lt;sup>1</sup> E. g. 'Ganges.' <sup>2</sup> à <sup>3</sup> E. g. 'a cowherd colony.' <sup>4</sup> E. g. 'Ganges.'

<sup>5</sup> The word 'Ganges' itself means the bank of the Ganges.

The word that bears the implied meaning.

of the word is the operation. Otherwise by a parity of reasoning even a word policically denotative function."]

I more a price of the more and the companies of the map of the control of the con

'monkey' implies the object climbed by the monkey, and the word 'climbed' indicates the intention. The same thing is to be understood elsewhere too. In the compound called Tatpurusa, however, the first word bears the implied meaning. For instance, in words like, rāja-puruṣa (a royal officer), the meaning of the word rājan (king) cannot be directly connected with that of the word purusa (person); for it is against the rule to conceive that two meanings of names1 other than particles<sup>2</sup> are connected by a relation of difference. Otherwise, even in the sentence, 'The king is a person,' a similar connection would have to be conceived. sentences like, 'A cloth is not a jar,' the meaning of 'not' is directly' connected with those of 'jar' and 'cloth'; hence the words 'other than particles.' phrases like 'a blue jar' the two meanings of names are connected by a relation of identity; hence the words 'by a relation of difference.' It cannot be urged that in words like rāja-puruṣa we must assume that there is recollection of an elided case-ending; for even one who does not recollect the case-ending apprehends the meaning from the words themselves. Therefore words like rajan (king) imply something pertaining to a king, and that is connected by a relation of identity with the meaning of the word puruşa (person).

In the compound called *Dvandva*, however, as in the sentence, 'Cut the *dhava*' and catechu plants (*dhava-khadirau*),' both these plants are apprehended

Words other than verbs.

<sup>2</sup> All indeclinables except the prefixes.

<sup>&</sup>lt;sup>3</sup> That is, by a relation of difference.

g timbre, morely great store in Spanish threat Ambjorga with a length point of the A State on the result of the Alberta deand the estimate of the second the estimate क्षिण के देख लाहि के अध्यादी वे अव्यक्ति है लेख र लेखा है। r in right of pin du a squar not and very pain of those if the expense bandons of ord this a asserted somethic fact as such some had changed address of a decision of decided a definition Cod, they unfarence is under the Markett this topic lemmer of your come comme include s(ergernf-rips) continue ing og og, fonomer out in south there is seen of the necessity of the the he see its u e, and, monorer, there is never any and cut the dhara and eater burples (respectively). there are duferent verbs, as in sentences the, 'Belvild being connected with the came act; for even when to amol our ai audiciou e si oroll tall logue of it are observed in cases where there is no as scintion. Nor that three is implication of association; for Nussilar is bence there is no implication. It cannot be unded in stem of the duality conveyed by the case-ending; tended how in the sentence. 'Sound the kettle-drum and drum,' the aggregate can be connected (with sounding), since it, being a kind of notion of addition, cannot be sounded; for it can be connected in an indirect way.1 The same thing also holds good of words like 'a group of five roots.' Others,2 however, say that a word like ahi-nakulam denotes a snake and a mongoose, and unity is connected with each; and the name Samāhāra is applied only to the compound that is singular and neuter, as mentioned in the aphorism, 'And Dvandva where there is an aggregation of the limbs of an animal, of musical instruments, (or of an army)'s; elsewhere the use of the singular number is wrong. In words' like pitarau (parents) and svasurau (father-in-law and mother-in-law), the word pity implies the parents, and the word svasura the parents of one's wife. Similarly in other cases also. In the word ghatāh (jars) there is no implication; for it is possible for many jars to be apprehended through the generic attribute jarhood.

In the case of the compound called Karma-dhāraya, however, in words like 'a blue lotus' the thing denoted by the word 'blue' is a feature of the thing denoted by the word 'lotus,' by the relation of identity; there is no implication there. Hence in the sentence, 'One should perform sacrifices for the

THE MEANS OF VERBAL COMPREHENSION

आसत्तियांग्यताकाङ्कातात्पर्यज्ञानिमध्यते ॥ ५२ ॥ कारणं ; संनिधानं तु पदस्यासत्तिरुच्यते । पदार्थे तत्र तद्वत्ता योग्यता परिकोर्तिता ॥ ५३ ॥

82 (contd.)-83. The knowledge of contiguity, consistency, expectancy and intention is the cause (of verbal comprehension). The juxtaposition of words is called contiguity. The coordination of the meaning of a word with that of another is called consistency.

The knowledge, etc.—The knowledge of contiguity, of consistency, of expectancy and of intention is the cause of verbal comprehension. Now the meaning of the word 'contiguity' is being stated: The juxtaposition, etc. The apprehension, without an interval, of the meanings of two words, one of which must be connected with the other (to complete the sense), is a cause of verbal comprehension. Hence a string of words like, 'The hill, has eaten, fiery, Devadatta,' does not lead to any verbal comprehension. In a series of words like, 'Blue, jar, substance, cloth,' there is verbal comprehension owing to a mistaken notion of contiguity. Even if a mistaken notion of contiguity

<sup>&</sup>lt;sup>1</sup> For the sake of sense the order should be changed as follows: 'The hill, (is) fiery, Devadatta, has eaten.'

<sup>&</sup>lt;sup>2</sup> The speaker meant: 'A blue cloth,' and 'A jar is a substance.' But the listener construed the words in the order in which they were spoken and understood: 'A blue jar,' and 'A cloth is a substance.'

with whatever1 else is required by sense, is consistent, and is contiguous.' So, they also say, the comprehension of the meaning of sections of a sentence is followed by the comprehension of the meaning of the complete sentence, in the very same way, through the recollection of the meaning of the words. This also refutes the (theory of the) transcendental word-essence (sphota) corresponding to whole words,2 supposed to be manifested by all its component letter-sounds; for verbal comprehension can be explained just by the (auricular) perception of the last letter-sound, combined with the impressions of the other letter-sounds (of the word)which (as the grammarians hold) manifests that (sphota).3 One thing, however, should be borne in mind: Where the word 'door' is uttered, verbal comprehension takes place from the apprehension of a word such as 'shut,' and not from the apprehension of its meaning, such as shutting4; for the apprehension of particular meanings of words, which is generated by those words, is the cause of particular verbal compre-

I Such as the fact of their being objects of an action (harmatva). The word ghatam (a jar, in the objective case) automatically conveys something more, viz. that it is the object of an action, viz. bringing, even before the word anaya (bring) is spoken.

<sup>&</sup>lt;sup>2</sup> Upheld by the grammarians. Since the spoken letters are transient, the grammarians, to explain how the meaning of a word is grasped, assume the existence of the eternal phota or word-essence, a metaphysical entity which is manifested by the uttered syllables and directly conveys the meaning of the word.

<sup>&</sup>lt;sup>2</sup> Since the *sphoja* itself depends for its manifestation on the spoken letters, it is superfluous.

As the Prabhakara school of Mimanisakas holds.

hensions. Moreover, since words denoting actions and their objects are necessary to sense in their particular forms, how can there be verbal comprehension without words denoting actions? Similarly, since in words like words denoting actions of the dailye care-ending is inerplicable miliour supplying some each word as explicable miliour supplying some such word as

verbal comprehension also. It is also not tenable that there is delay in verbal comprehension owing to a delay in the apprehension of consistency.

## यत्पदेन विना यस्याननुभावकता भवेत् । आकाङ्काः, वक्तुरिच्छा तु तात्पर्यः परिकोर्तितम् ॥ ८४॥

84. (A word has) expectancy (with regard to that) word without which it cannot produce knowledge (of syntactical connection); while the desire of the speaker is called intention.

Expectancy is being explained: A word has, etc. That is to say, a word has expectancy with regard to that word without which it cannot convey any idea of syntactical connection. Substantives in any of the cases do not lead to a sense of connection without a verb; hence they have expectancy with regard to the latter. Although, strictly speaking, the juxtaposition of substantives and verbs is satisfied by contiguity, yet the notion of expectancy about the objective caseending after the word ghata (jar), is a cause of the apprehension of the jar as an object of some verb (e. g. bring). Hence no verbal comprehension takes place from a string of words like, 'Jar, objecthood, bringing, effort.' In an utterance like, 'Here comes the son (putrah) of the king (rājūah); remove the man purusah), since there is apprehension of the intention that the word rajan (king) is to be connected with the word putra (son), its connection is understood to be with that alone. But if the intention were so apprehended that it was to be connected with the word

regard to words uttered by a parrot, apprehension of the divine intention is a cause. Where, however, a sentence uttered by a parrot does not give a meaning consonant (with fact), apprehension of the intention of the trainer is the cause. Others, however, hold that with regard to words having multiple meanings and so on, it is only occasionally that apprehension of the speaker's intention is a cause (of verbal comprehension). Thus, with regard to words uttered by a parrot, verbal comprehension takes place even without an apprehension of the intention. As regards the Vedas, however, the meaning is ascertained by means of arguments guided by principles of interpretation that are without beginning.

#### RECOLLECTION

the care face of a superior can be properly on the second second man and the manifestions of the second Constitution of case to apply the triplet neo fa na militara di kecama kepalaga arawa ng A CONTRACTOR OF THE PROPERTY OF THE CONTRACTOR O appropriate the control of the second of of the first hard have made and the second के राष्ट्रकार के अधिक अपने के अवस्था के रेवाल्कित का के हैं जब कियाओं में जी की जब करने अने जना में ज there is a safety that the first seas moving अध्यक्ष है। इस कार्य स्थाप के पूजन के अध्यक्ष के प्राप्त के स्थाप के स्थाप ម្នាក់ស្រីក្រុង នៅក្នុង សុខ នៅបា សម្រាប់ប្រសិក អាជ្រាក នាក្សូ dage e sqf jes ging oppm primejen राहित्व वात्रा वाद्य सुरुष अस्त्रा वा रचारमध्य वात्रास्त्रास् And step the med to be at your batter than the hand makiling a ye brounds of me nimiting mitted our circuitte suppliered transmit and torme out of apply occurs has forest all for stall, this ्रताल रहात विवादम केन्द्र । जान्य नव्य स्व अवस्था और स्थलकारी wide of a bander-ban of very guist en dun their most ten ted noballeral mode nad avid eachings. to enious and recollection. Of these the considers to oth being of two kinds according to its division into in a previous pa sage, knowledge has been speken

of any conclusive reasoning (in favour of previous experience), (previous) knowledge also may be the cause; for when the causality of a thing in respect of a particular attribute¹ is not known to have an exception,² causality in respect of a general attribute³ is a superfluity. How else is a staff not held to be the cause (of a jar) through its circular motion, in respect of being a substance?⁴ It cannot be urged that the doubt that intermediate recollections³ destroy the impressions, leads to a doubt about inconstancy⁶; for rather than assume an infinite number of impressions and their destruction, it is simpler to assume that the final recollection alone destroys the impressions, and this removes the doubt about inconstancy. This is how recollection takes place.

<sup>1</sup> E. g. the fact of being experience.

<sup>&</sup>lt;sup>2</sup> Because recollection is never known to take place withcut experience.

<sup>3</sup> The fact of Leing knowledge.

<sup>4</sup> The staff is a cause as a staff, not as a substance.

<sup>5</sup> Between the first and the last recollection.

<sup>6</sup> That the cause may not be experience as experience.

And since the absence of connection is not possible if that something, viz. the mind, is omnipresent, it is not omnipresent. It cannot be urged that the delay in knowledge is due only to the delayed appearance of the stimulus, viz. a particular merit or demerit; for in that case the eye and other organs too need not be assumed. Nor can it be questioned how, in acts like the eating of a 'long cake' (dirgha-śaṣkulī), as also in the case of persons attending to various things at the same time, there can be simultaneous knowledge through many organs; for the various forms of knowledge arise, as the mind, being atomic, quickly connects itself with many organs. The notion of simultaneity is an error, as in the case of piercing a hundred lotus leaves, for instance. It cannot also be urged that since the mind is possessed of expansion and contraction, both1 may be explained; for it is cumbrous to assume multiple parts (of the mind), their destruction and so on, and simpler to assume that the mind is atomic and without any parts. This is the long and short of the matter. The category of substance has been explained.

<sup>&</sup>lt;sup>1</sup> Simultaneity and its opposite.

substancehood, since ether etc.<sup>1</sup> do not possess substance or action.<sup>2</sup> And since the state of being substancehood (*dravytvatva*), the state of being a generic attribute, and so on, are not generic attributes, they are excluded.

Without qualities, etc.—Although the state of being without qualities applies to actions etc.<sup>3</sup> also, yet it must be understood (that qualityhood consists in) possessing generic attributes, being other than actions and having no qualities. Generic attributes etc. do not possess generic attributes, actions are not other than actions, and substances are not without qualities; hence the definition does not unduly extend to them. Without actions is a statement of fact, not a definition; for then it would wrongly extend to ether etc.

#### THEIR VARIOUS GROUPINGS

ह्रपं रसः स्पर्शगन्धौ परत्वमपरत्वकम् ॥ ५६ ॥ द्रवो गुरुत्वं स्नेहश्च वेगो मूर्तगुणा अमी । <sup>4</sup> धर्माधर्मो भावना च शब्दो बुद्धचादयोऽपि च ॥ ५७ ॥ पतेऽमूर्तगुणाः सर्वे विद्वद्भिः परिकीर्तिताः । संख्यादयो विभागान्ता उभयेषां गुणा मताः ॥ ५५ ॥

<sup>1</sup> Refers to space, time and the soul.

अतीन्द्रियाः; विभृनां तु ये स्युवैशेषिका गुणाः ।

अकारणगुणोत्पन्ना पते तु परिकीर्तिताः ॥ ६४॥

90-94. All other qualities except these are considered to abide in a single individual. The group of six beginning with knowledge, (the four) ending with touch, oiliness, natural liquidity, merit and demerit, tendency and sound—these are special qualities. (Qualities) beginning with number and ending with nearness, artificial liquidity, weight and impulse—these are described to be general qualities. (Qualities) beginning with number and ending with nearness, liquidity and oiliness—these are perceptible to two organs. While (the four) ending with touch, as also sound, are perceptible to a single external

presently. Knowledge etc., however, are not of that kind, since the soul etc. are without a cause.

अपाकजास्तु स्पर्शान्ता द्रवत्वं च तथाविधम् । स्रोहवेगगुरुत्वेकपृथक्त्वपरिमाणकम् ॥ ६५ ॥ स्यितस्थापक इत्येते स्युः कारणगुणोद्भवाः । संयोगश्च विभागश्च वेगश्चैते तु कर्मजाः ॥ ६६ ॥

95-96. (The four) ending with touch that are not produced by the action of fire, liquidity of that kind, oiliness, impulse, weight, separateness of one thing (from others), dimension, and elasticity—these are produced by the qualities of their causes. Conjunction, disjunction and impulse—these, however, are produced by action.

Not produced, etc.—Colour etc. that are produced by the action of fire  $(p\bar{a}ka)$  are not produced in accordance with the qualities of their causes; hence the qualification, not produced by the action of fire. Of that kind, i. e. not produced by the action of fire. Unity also should be understood as belonging to this group.

Conjunction, etc.—Although the fact of being produced by action is not a common feature,<sup>2</sup> since it wrongly extends to jars etc. and does not extend, as it

<sup>&</sup>lt;sup>1</sup> That is, produced by the qualities of its cause. Not so duality etc., which are due to the notion of addition (apehsābuddhi).

<sup>&</sup>lt;sup>2</sup> Of conjunction, disjunction and impulse.

chould, to conjunction that is due to conjunction, yet it chould be understood to mean the possession of there generic attributes concentiant with qualityhood that shide in things produced by action.<sup>3</sup> The came is to be understood in other cases also,<sup>3</sup>

| क्रियां क्रियं क्रियां क्रियां क्रियां क्रियां क्रियां क्रियां क्रियां क्रियं क

the open of the tour ending with touch, directly, distribution of the form of the distribution of the distribution of the final contract of the contract of th

substances, as also the two beginning with conjunction, are of sectional extensity.

The four, etc.—Here touch should be regarded as other than hot. Since the suffix tva in eka-pṛthaktva (separateness of one thing) must be joined to each term (of the compound), the word should be taken to mean both unity and separateness, and the word 'separateness' to mean separateness of one thing (from others). Have non-inherence: The colour, taste, smell and touch of a jar etc. spring from those of its two halves. Similarly the dimension etc. of the two halves of a jar are the non-inherent cause of the dimension etc. of the jar. Sound also is the non-inherent cause of a second sound. The same should be understood with regard to elasticity as also separateness of one thing (from others).

The fact of being an auxiliary cause—That is to say, because knowledge etc. are the auxiliary cause<sup>3</sup> of desire and so forth.

Both kinds of causality—non-inherent and auxiliary. For instance, warm touch (of the parts) is the non-inherent cause of warm touch (of the whole), and the auxiliary cause of (the touch) that is produced by the action of fire. Weight (of the parts) is the non-inherent cause of weight (of the whole) and (the first)

<sup>1</sup> Sound is a quality, the inherent cause of which is ether. The first sound inhering in ether produces the second sound, and is therefore the non-inherent cause of the latter.

That is, the elasticity and separateness of one thing (from another) belonging to the pair of halves of a jar are the zon-inherent cause of those of the jar, and so on.

<sup>2</sup> Not non-inherent cause. See footnote 2 on p. 25-

tall, and the auxiliary cause of impact. Impulse (of the parts) is the non-inherent cause of impulse (of the rabole) and inovement, and the auxiliary cause of impulse, and the auxiliary cause of solution. The eculumction of the auxiliary cause of sound the kettle-dram and tick is the auxiliary cause of sound, while the conjunction of the kettle-dram and chier is bothle the conjunction of the kettle-dram and chier is like non-inherent cause. The disjunction of the two hibe two consultates of a boundoo is the auxiliary cause of sound, that the conjunction of the hiberties of the conjunction of the hiberties of the connection of the hiberties is like to one of the confidence of a boundoo is the auxiliary cause of sound, the two conjunction of the hiberties is and the conjunction of the hibrory cause of sound, the two conjunction of the hibrory cause of sound, and the conjunction of the hibrory cause of sound, and the conjunction of the hibrory cause of sound, and the conjunction of the hibrory cause of sound, and the conjunction of the auxiliary cause of sound, and the conjunction of the kettle-dram and chier is action of the factory of the bands of the two causes of the two auxiliary cause of sound.

Reply: The word rūpa may not actually be used, yet a particular generic attribute common to blue, yellow and other colours is indeed a fact of experience. Although the word rūpa may not actually be used, yet we certainly have such perceptions as 'blue colour' or 'yellow colour,' in which the (synonymous) word varna specifically occurs. Similarly generic attributes such as blue-colourhood (nīlatva) are also facts of perception. It cannot be urged that blue and other colours are each a single individual, and hence, on account of abiding in a single individual, blue-colourhood and so on cannot be generic attributes. Because we have the perception that blue colour has been destroyed, red colour has been produced, and so on; hence, being subject to origin and destruction, blue colour etc. are manifold. Otherwise when one blue colour is destroyed, the world would altogether be devoid of blue colour. Nor can it be urged that the above perception is concerning the origin and destruction of only the inherence of blue and red colours; for the perception does not specifically mention inherence. Neither can it be contended that the (admission of) oneness is due to the perception that it is that same blue colour, and to considerations of simplicity. Because the perception in question has for its object something of the same class, as is the case with the statement, 'It is that same Gurjarī (tune)'; and the question of simplicity is nullified by perception.1 Otherwise jars etc. would also become one, and the notion of their origin and destruc-

aggregate a distinct colour called composite. Hence also we have the experience, 'A composite colour.' For it would be cumbrous to assume many colours (in its stead).¹ Thus, since blue colour, for instance, may be supposed to obstruct the production of yellow or any other colour in the aggregate, neither yellow nor any other colour is produced.

By this touch also is explained.2 Taste etc. also do not cover only a part of a body; but there is no harm even if there is no taste in an aggregate made up of parts possessing tastes of different kinds. There the tongue perceives the taste of the parts only; and since the tongue etc. have not the power of perceiving substances, there is no harm even if the aggregate is without any taste. The new school, however, says: In the aggregate there is a variety of colours covering only a part of it; for it is cumbrous to assume that blue colour, for instance, obstructs yellow or any other colour. This is also the explanation of a scriptural text like the following: 'That is called a nīlavṛṣa (blue bull) which has a grey mouth and tail, white hoofs and horns and is (otherwise) red in colour.'3 It cannot be urged that there is contradiction between two individuals possessed of generic attributes, each covering an entire body as well as only

One may contend that since blue and other colours forming the parts produce an aggregate, the latter also must have those different colours. This is refuted as above.

<sup>&</sup>lt;sup>2</sup> That is, for the above reasons composite touch is also to be admitted.

105. The fact of their being due to change through the action of fire (paka) occurs in earth alone, and nowhere else. Even there, change through the action of fire takes place, according to the Vascesika system, only in atoms.

the magnetic property of the state of the st THE REPORT OF THE PERSON OF THE PARTY OF THE PARTY. the first term to the second s that tap and find it is been seen to the investment of the goods. ga kita sida makila langgiring a hasa kesala sa ATT COMES OF CAMPLES AND IN THE FOR THE CASE OF on the man war from an examination अमा बन्धा पात्र ताच्या पुरत्य सम्बद्धाः अस्ति अस्ति वृत्र स्टब्स्ट रिस्ट रुक्त हिंदू कि विद्यार है के अपने देशक का विद्यालय है जो है है मा लेक्ट्रांट के दूर का देखा मा एक र वे द्वार का का क्र ষ্টা প্ৰায়ে বিষয় হৈ কৰে। সেই পুৰ্বা কৰি সাধুল কৰে। वार्यभाषा कर्न स्थार्थ स्थार वार्षा व वार्षा स्थापित स्था Sandy as males tell cards an Aris eath office of to december of the state of the property of the second property of t play all soil agents about the or assisting but unum r je glimul ng Ag horman r ar ange ni trai bar arrawat - iro bahuni e ni fotod si of the Colour etc. do not change in water, even if it nobrangary set through though that the comparison reas the Beau e in cath alone we find things of Their Of colour, taste, sinell and touch, Nobeing set forth in terms of moments  $(k sana)^1$  showing in how many moments, commencing from that of their destruction, a dyad etc. are recreated and attain a new colour etc.

Now, if disjunction due to disjunction<sup>2</sup> is not admitted, the duration is nine moments. But if it is admitted, then disjunction must be held to produce disjunction only by depending on something. If it does that independently of anything, then it becomes an action. For 'Action is the independent cause of conjunction and disjunction '3-so runs the Vaiseșika aphorism (I. i. 17). The word 'independent' means: independent of any positive entity that is produced after it. Otherwise an action also, to get a subsequent conjunction, must require the cessation of the previous conjunction-which would make the definition too narrow. Now, if the disjunction due to disjunction takes place immediately after the time associated with the destruction of the conjunction that produced the substance, then the process takes ten moments. If, however, the disjunction due to disjunction takes place immediately after the time associated with the destruction of the substance, then the process takes eleven moments.

<sup>1</sup> The smallest indivisible part of time.

<sup>&</sup>lt;sup>2</sup> The disjunction of the atom from ether, consequent on the disjunction of the two atoms constituting a dyad. See verse 120. Unless this is admitted, there can be no conjunction of the atom with an object in space at a subsequent moment, and consequently the action in the atom cannot coase.

<sup>&</sup>lt;sup>2</sup> Whenever an action takes place, there is automatically either conjunction or disjunction.

This is the process lasting for nine moments. Now about that lasting for ten moments. That would be if the disjunction due to disjunction takes place immediately after the time associated with the destruction of the conjunction that produced the substance. For instance, through the conjunction of fire there is action in the atom that goes to make up the dyad; then there is disjunction; next there is the destruction of the conjunction that produced the substance; (1) this is followed by the destruction of the dyad and the disjunction due to disjunction. (2) Then comes the destruction of the dark colour<sup>2</sup> and of the previous (non-productive) conjunction.3 (3) This is followed by the origination of red colour and the conjunction with the neighbouring point of space. (4) Then there is the destruction of the action in the atom that was produced by the contact of fire. (5) Next comes action conducive to the production of the (new) substance, owing to the conjunction of a soul4 possessed of merits and demerits. (6) Then there is disjunction.<sup>5</sup> (7) Then comes the destruction of the previous conjunction. (8) This is followed by the conjunction that would produce the dyad. (9) Then there is the origination of the dyad. (10) Then comes the origination of red colour.

<sup>1</sup> Hence it must precede the latter.

fire does not last so long.<sup>1</sup> Moreover, if the destroying agency is also the originating agency, then after the (conjunction of) fire is destroyed with the colour etc., the atom will ever remain colourless.<sup>2</sup> And if the originating agency is also the destroying agency, then after the fire is destroyed with the origination of the red colour, the atom can never be redder.<sup>3</sup>

If, on the other hand, we conceive action to take place in the other atom also, then qualities originate even beginning with the fifth moment. For instance, action takes place in one of the atoms; then there is disjunction; this is followed by the destruction of the conjunction that produced the dyad and by (productive) action in the other atom; (x) then comes the destruction of the dyad, as also the disjunction due to action in the other atom—this is one moment. (2) Then there is the destruction of the dark or any other colour, as also of the previous conjunction owing to the above disjunction—this is another moment. (3) Then there is the origination of red colour as also the conjunction that produces the (new) substance—this is the third moment. (4) Next there is the origina-

<sup>&</sup>lt;sup>1</sup> The conjunction of fire that destroys the dyad is also destroyed with it. It does not last till the moment preceding the origination of red colour, and hence cannot be its cause.

<sup>&</sup>lt;sup>2</sup> Since the final conjunction of fire, coming at the end of a series of destructions and originations of colours, must also destroy the final colour, and since it is itself destroyed, there is no other agency to originate another colour.

<sup>3</sup> The cause in this case is the conjunction of fire, and the effect just a coloured atom of earth. So the cause being the same, the effects cannot be different, but as a matter of fact, atoms of vermillion are much redder than others.

tion of the dyad. (5) Then comes the origination of red colour. These are the five moments.

comes the origination of red colour. This is the process lasting for seven moments.

Likewise, if we conceive action to take place in the other atom simultaneously with the origination of red colour, the process takes eight moments. For instance, there is action in the atom; then disjunction from the other atom; next, the destruction of the conjunction that produced the dyad; (1) then the destruction of the dyad. (2) Then there is the destruction of the dark colour. (3) Next comes the origination of red colour as also action in the other atom. (4) Then there is the disjunction due to action in the other atom. (5) Then comes the destruction of the previous conjunction in the other atom. (6) This is followed by conjunction with the other atom. (7) Then there is the origination of the dyad. (8) Next comes the origination of red colour. This is the process lasting for eight moments.

NUMBER, DIMENSION AND SEPARATENESS

नेयायिकानां तु नये द्वचणुकादावपीप्यते । गणनाव्यवहारे तु हेतुः संख्याभिधीयते ॥ १०६ ॥

106. In the logicians' system, however, it (change through the action of fire) is also admitted in dyads etc. The cause of the convention of counting is called number.

In the logicians' system, etc.—According to the logicians, change through the action of fire takes place even in aggregates such as the dyad. Their idea is

this: Since the aggregates are porous, their change through the action of the fine parts of fire that penetrate them is not inconsistent, although the parts of the appregates may be held together (by the latter); for it is cumbrous to assume an infinite number of aggregates (being successively produced) and their delitraction. Thus the recognition that it is that same delitraction. Thus the recognition that it is that same the is also consistent. Where, however, there is no tectgnition, there the destruction of the aggregate also is admitted.

In order to describe number the text says: The cause, etc. That is to say, the extraordinary cause of the convenient of counting is number.

#### निस्तेषु निस्पेनेक्तम्, अस्थिनेद्रतित्यमियते । रिसास्यः पराधांन्ता अध्यायुद्धिया मताः ॥ १०० ॥

108. They are said collectively to extend over many substratums. Their destruction has been decided to take place from that of the notion of addition.

They are, etc.—Although the inherence of duality etc. is even in each jar and so on, yet owing to the absence of any notion that one is two, and because of the existence of the notion that one is not two, a particular relation of duality etc. called collective extensity (paryāpti), abiding in many substances, is assumed. Their destruction, etc.—First there is the notion of addition; then there is the origination of duality; next comes the perception of the characteristic trait (viśesana) of duality, that is, the indeterminate perception of dualityhood 1; this is followed by the perception of what2 is possessed of dualityhood, as also the destruction of the notion of addition; then there is the destruction of duality. Although knowledge lasts only for two moments-because the perceptible special qualities of the omnipresent substances3 are destroyed by the qualities that succeed them-yet the notion of addition is assumed to last for three moments. Otherwise at the time of indeterminate perception, after the notion of addition has been destroyed, duality itself

<sup>&</sup>lt;sup>1</sup> As well as duality. This is a vague sort of knowledge, in which the object, its characteristic trait and the relation between the two are not well-defined. See verse 136.

and so on. One thing should be understood in this connection. Where the notion of unity is concerning an indefinite number of objects, there a number conveying multiplicity, which is different from those conveying triplicity etc., is produced, as in the case of an army, a forest, etc. This is the view of the author1 of the Nyāya-kandalī.2 Udayana, however, holds that multiplicity is nothing but triplicity etc. So the generic attribute multiplicityhood, which includes triplicityhood etc., is not an additional entity. In the case of an army, a forest and so on, although triplicity etc. are produced, these are not comprehended on account of some defect.3 Hence the notion, 'This army is more numerous than that,' is consistent. But they would not be consistent if multiplicity conveyed a different number, because it would not admit of any comparison. This should be borne in mind.

Dimension is being described: Dimension, etc. That is to say, dimension is the extraordinary cause of the convention of measurement.

Mel. c. dimension. Element—Mere the nord dimension As is sentialed minute, medium, long and there. Topposition of the repleated. to be that due to dimension. Accumulation is that conjunction which is designated as loose. This causes the dimension of cotton etc. The destruction (of dimension) is due to that of its substratum. Separateness is the cause of the notion of a thing being separate. (It is) analogous to number.

The dimension due to dimension is being exemplified: The dimension, etc. The dimension of a jar etc. is caused by that of its two halves, and so on. To illustrate the dimension due to accumulation, the text goes on to define accumulation: Accumulation, etc. And dimension is destroyed just after its substratum is destroyed. This is being stated: The destruction, etc. That is to say, of dimension itself. It cannot be asked, how can only the destruction of the aggregate lead to the destruction of its dimension, since it is a wellknown fact of perception that even while the aggregate lasts, the loss or accession of three, four or more atoms produces a new dimension, although the aggregate may still be recognised as being the same? Because a dyad must be held to be destroyed when it loses an atom; and when it is destroyed, the triad also is destroyed. In this order the destruction of the final aggregate is inevitable. And when there is a destroying agency, it is impossible to refute destruction merely by a denial. When there is an accession of parts in the body etc., the non-inherent cause (conjunction) is inevitably destroyed, and hence also the aggregate.

It cannot be urged that even without the destruction of a cloth, for instance, there would be an increase

II4. Its purpose is not considered to be served by mutual non-existence; for the notion, 'It is separate from this,' is distinct from the notion, 'It is not this.'

Objection: In sentences like, 'It is separate from this,' we find a case of mutual non-existence. So why is separateness admitted as a distinct quality? It cannot be urged that there may well be separateness, but not mutual non-existence; for then there would be no such notion as, 'A jar is not colour.' In colour there is certainly no other quality<sup>2</sup> called separateness from a jar, nor is there in a jar any separateness from a jar,<sup>3</sup> in which case an indirect relation might be assumed.

This is being answered: For the notion, etc.

Objection: It is only a difference in words, but not in sense.

Reply: Not so; for unless there was a difference in sense, there would be an ablative case-ending in the sentence, 'A cloth is not a jar,' as in the sentence, 'It is separate from a jar.' Therefore the sense that requires an ablative case-ending is different from the

<sup>1</sup> See verse 108.

<sup>&</sup>lt;sup>2</sup> Because a quality cannot have any other quality.

<sup>3</sup> It cannot be separate from itself.

sense of the negative particle 'not,' which is mutual to neexistence, and it is assumed to be a distinct quality.

117-118. The encounter of two rams is said to be of the second kind. The conjunction of a jar and a tree owing to the conjunction of one-half of the jar and the tree is of the third kind. Conjunction due to action also is described as being twofold: Impact and contact. Of these the first is the cause of sound.

Encounter—i. e. conjunction. Second—i. e. due to action in both things. Is of the third kind—i. e. conjunction due to conjunction. This is to be construed with the preceding verse. The first—i. e. impact.

#### शब्दाहेतुर्द्वितीयः स्यात् ; विभागोऽपि त्रिधा भवेत् । पककर्मोद्भवस्त्वाद्यः, द्वयकर्मोद्भवोऽपरः ॥ ११६ ॥

Disjunction also may be of three kinds. The first arises from action in one thing; the second from action in two things.

The second—i. e. the conjunction called contact.

Disjunction, which is the extraordinary cause of the notion that a thing is disjoined (from another), is being described: Disjunction, etc. Action in one thing, etc.—Their illustrations, we must understand, are the disjunction of the falcon from a hill, and so on, analogously to those of conjunction.

#### विभागजस्तृतीयः स्यात् ; तृतीयोऽपि द्विधा भवेत् । हेतुमात्रविभागोत्थः, हेत्यहेतुविभागजः॥ १२०॥

disjunction which is opposed to non-productive conjunction, then it will not cause that disjunction which is opposed to productive conjunction. It cannot be asked why the disjunction occurring in the cause does not also produce its disjunction from another point of space, before the substance is destroyed; for it is impossible for the part¹ that possesses that disjunction which is opposed to productive conjunction, to produce disjunction from another object in space while the substance exists.

The second<sup>2</sup> kind of disjunction is this: Where action in the hands produces disjunction of the hand from a tree, and this leads to a notion that the body also has been disjoined, there the action in the hand is not the cause of the disjunction of the body from the tree; for that action has a different substratum.<sup>3</sup> In the body there is no action at all; for action in an aggregate depends on action in all its parts taken together. Hence there the disjunction<sup>4</sup> between the cause and what is not the cause produces the disjunction between the effect<sup>3</sup> and what<sup>6</sup> is not the effect. Therefore disjunction is an extra quality. Otherwise there would be no notion with regard to the body that it has been

<sup>&</sup>lt;sup>1</sup> Viz. one of the two halves of the jar.

<sup>&</sup>lt;sup>2</sup> Viz. disjunction due to that between its cause and what is not so.

<sup>&</sup>lt;sup>2</sup> Viz. the hand, while the disjunction in question abides in the body and the tree.

<sup>&</sup>lt;sup>4</sup> The disjunction between the body and the tree is due to that between the hand and the tree. Here the hand is the cause, and the tree is not.

#### दोषोऽप्रमाया जनकः, प्रमायास्तु गुणो भवेत् । वित्तदूरत्वादिरूपो दोषो नानाविधः स्मृतः ॥ १३१ ॥

131. Defects are the cause of invalid knowledge, and merits that of valid knowledge. Defects are said to be of various kinds, viz. (an excess of) bile, distance, and so forth.

Defects, etc.-With regard to invalid knowledge defects are the cause, and with regard to valid knowledge merits are the cause. There too defects such as (an excess of) bile are not identical in all cases. That they are causes is established by the method of agreement and difference, while the fact of merits leading to valid knowledge is established through inference. For instance, valid knowledge is produced by causes other than the general causes of knowledge, since it is a knowledge that is produced, as is the case with invalid knowledge. It cannot be urged that the absence of defects alone should be the cause: for in that case, when there is the knowledge that a conch is yellow, there would not be any valid knowledge regarding the conch (even),1 owing to the presence of a defect, viz. (an excess of) bile. And in the absence of any conclusive reasoning on either side, it is proper that merits should be the cause, rather than the absence of an infinite number of defects. Nor can it be urged that even when merits are present, there is no knowledge of whiteness in the conch owing to obstruction through (excessive) bile; hence the absence of defects such as (an excess of) bile must be held to be the cause.2 So

While as a matter of fact there is valid knowledge.

<sup>&</sup>lt;sup>2</sup> The absence of obstacles is a cause of effects in general.

134. In verbal comprehension the merit is the valid knowledge of either consistency or intention. Here knowledge other than error is called valid knowledge.

Now it may be asked, what are the merits? So the merits with regard to perception etc. are being pointed out in order: In perception, etc. In perception the merit is the connection (of the organs) with objects possessing true (not fictitious) attributes. In inference the merit is the knowledge of the presence, in what has the thing to be inferred (the subject), of the concomitant of the thing to be inferred. Similarly we must understand with regard to what follow. Valid knowledge is being described: Here knowledge, etc.

#### अथवा तत्प्रकारं यज्ज्ञानं तद्वद्विशेष्यकम् ।

तत्त्रमाः न प्रमा नापि भ्रमः स्यान्निर्विकल्पकम् ॥ १३४ ॥

#### प्रकारतादिशुन्यं हि संवन्धानवगाहि तत्।

135-136. Or valid knowledge is the knowledge that has reference to a substantive possessed of a particular attribute which is also a feature (prakāra) in that knowledge. Indeterminate knowledge is neither valid knowledge nor error. For it is devoid of reference to an adjectival feature<sup>1</sup> etc. and does not concern itself with relations.

It may be objected: Where with regard to a nacre and a piece of silver there arises the knowledge, 'These two are silver,' there, even with regard to the portion

<sup>1</sup> Prakāratā, lit. featurehood, is not something over and above the feature. The 'etc.' refers to the substantive element of knowledge.

Reply: No; for the knowledge of conjunction with something¹ which has that absence of conjunction of a monkey which is not co-existent with its counterpositive, is an error. It cannot be urged that the knowledge of conjunction (of a monkey) with that part of a tree where there is no conjunction of the monkey, would not be an error, since the absence of conjunction there is co-existent with its counterpositive; for the knowledge of conjunction with that part where there is no conjunction is an error. Even if, owing to the lack of uniformity in the things to be defined, the definition too is not uniform, there is no harm.²

<sup>1</sup> E. g. quality.

<sup>2</sup> An objection is raised that the definition of invalid knowledge which is modified in three different cases, is not uniform, but uniformity of definition is always desirable. The Naiyāyika replies to the objection as follows: of uniformity in the definition is due to a corresponding lack of uniformity in the different varieties of invalid knowledge, and as such does not indicate an incapacity on our part. The first definition of invalid knowledge as knowledge of an attribute in a substratum where it is absent, holds good in all cases except that of conjunction, which is invariably concomitant with its absence. The second definition is thus put forward, viz. that the knowledge of the absence of conjunction in a place where such absence of conjunction is not co-existent with its presence, is invalid. But we can conceive of another situation. In a substratum where there is actual conjunction together with its absence, but necessarily in different parts, the knowledge of conjunction in the part which is actually devoid of it would not be a case of invalid knowledge, as the absence of conjunction here is co-existent with its presence, and so falls outside the scope of the definition. But this is clearly a case of invalid knowledge, and to cover such cases, a new definition is put forward, viz. that the knowledge of conjunction in respect of a part wherein the conjunction is ubsent, is also invalid.

### ANDRIAMATIS THE VALUETY OF WEOWERED NOT

then, in the absence of a knowledge of the substantive, how can there be a doubt? Therefore the validity of knowledge is to be inferred. For instance, 'This knowledge is valid knowledge, because it leads to a successful inclination; that which is not of this kind1 is not such,2 as for example invalid knowledge.' 'This knowledge, in which earthhood is a feature, is valid knowledge, because it is a knowledge, about something possessed of smell, in which earthhood is a feature.' Similarly, 'This knowledge, in which waterhood is a feature, is valid knowledge, because it is a knowledge, about something possessed of oiliness, in which waterhood is a feature.' It cannot be questioned how the knowledge of the reason takes place, because the fact of its having earthhood as its feature is self-evident. Here,4 through the perception of smell it is easy to perceive also the fact of its having for its substantive something that has the smell. Buts the fact of its having for its substantive somethings that is possessed of particular attributes,7 which fact is determined by the fact of the knowledge having them as a feature, is not perceived, in order to make room for (the possibility of) doubt.

Objection (by the Teacher): Since all knowledge

<sup>&</sup>lt;sup>1</sup> That is, not valid knowledge.

<sup>2</sup> Does not lead to a successful inclination.

<sup>3</sup> Only this, but not the fact of its having a particular object.

<sup>4</sup> Where the knowledge is of something possessed of smell, and has earthhood as its feature.

Each of the two facts is perceived singly, but not jointly.

<sup>6</sup> Viz. earth.

 $i\bar{n}\bar{a}na$ ) is considered to be the cause of all inclination. Thus there is no harm even in assuming supernormal connection1 through knowledge in conformity with the notion of the tin being possessed of silverhood; for cumbrousness that leads to a result is not a defect. Moreover, where with regard to tin and silver there has arisen the notion that both these are silver or tin, there is no obliteration of the cause<sup>3</sup> either. Further, where with regard to tin and silver there arises the notion that these are silver and tin respectively, there simultaneously one would have inclination and disinclination. For if tin is perceived to be different from tin, and silver different from silver, it would be knowing one thing for another-a thing you dread; so, to avoid it, you would say that owing merely to a defect, there is the non-perception of difference from silver with regard to tin,3 and the non-perception of difference from tin with regard to silver.4 Besides, if the non-perception of difference<sup>5</sup> be the cause of inference, then, when with regard to a lake there is the non-perception of difference from what is possessed of smoke, the concomitant of fire, the inference would be unimpeded. If, on the other hand,

<sup>&</sup>lt;sup>1</sup> The previous knowledge of silver serves as the connection to bring about the erroneous perception of silver in the tin.

<sup>&</sup>lt;sup>2</sup> The non-perception of their difference.

<sup>3</sup> This will lead to inclination.

<sup>4</sup> This will lead to disinclination.

s From what is possessed of the concomitant.

<sup>&</sup>lt;sup>6</sup> Of fire in the lake, which is clearly a wrong inference. Hence knowing one thing as another must be admitted.

hension of co-existence are the cause of the apprehension of invariable concomitance. That is to say, since the apprehension of inconstancy is an obstacle to the apprehension of invariable concomitance, the absence of it is the cause of the latter. Similarly, by the method of agreement and difference, the apprehension of co-existence is also a cause. But repeated observation is not a cause, since sometimes the apprehension of invariable concomitance takes place even from a single observation in case inconstancy does not suggest itself. Sometimes repeated observation is of assistance by removing doubts about inconstancy. Where, however, doubts are not removed even by repeated observation, there argument contradicting rival propositions is required. For instance, if there is a doubt that smoke may exist even where there is no fire, then it is removed by the knowledge of the causal relation subsisting between fire and smoke: If it be not possessed of fire, it would not be possessed of smoke, since an effect cannot be produced without a cause. If even then there is a doubt that should there ever be an effect without a cause, it will take place just arbritrarily, then it is removed by means of a check: If indeed an effect takes place without a cause, then, according to you, one will not uniformly have recourse to fire for the sake of smoke, nor to eating for the sake of satisfaction. Where there is naturally no occasion for a doubt, there argument also is not required. This is expressed by the text: Sometimes argument removes a doubt.

<sup>&</sup>lt;sup>1</sup> Even when the causal relation between fire and smoke is known.

darkness is present in a jar etc. also. Similarly in the sentence, 'Air is perceptible, because it is the substratum of touch, which is perceptible,' the fact of having manifested colour will not be a vicious condition, since perceptibility is present in the soul etc., where colour is absent. Likewise in the sentence, 'Destruction is perishable, because it is produced,' the state of being a positive entity will not be a vicious condition, since perishableness is present in previous non-existence also, where the fact of being a positive entity is absent.

Reply: Not so; for the intended meaning (of the term 'vicious condition') is that it must not be inclusive of a reason that has the same attribute as is possessed by the thing to be inferred that is included by the vicious condition. The fact of being due to eating spinach is inclusive of the darkness that is qualified by the fact of being the son of Mitrā, but not of the reason that is qualified by it.1 Similarly the possession of manifested colour is inclusive of the perceptibility that is qualified by the state of being an external substance -which abides in the subject-but not of the reason that is qualified by the state of being an external substance. Likewise in the sentence, 'Destruction is perishable, because it is produced,' the state of being a positive entity is inclusive of the thing to be inferred that is qualified by the state of being produced. But a valid reason has no such attribute as can be inclusive of the thing to be inferred that is qualified by a partic-

<sup>&</sup>lt;sup>1</sup> This is in the fair sons of Mitrā as well, where, however, the fact of being due to eating spinach is absent.

an inference of the absence of the thing to be inferred (in the reason). For example, in a proposition like, '(The hill) has smoke, because it has fire,' we infer that the fire exists without smoke, because it exists without the conjunction of damp fuel, which is inclusive of the smoke, and that which exists without the inclusive entity (vyāpaka) will necessarily exist without the concomitant. Where, however, the vicious condition is inclusive of the thing to be inferred that is possessed of a particular attribute, there the absence of the vicious condition in something possessed of that particular attribute leads to an inference of the absence of the thing to be inferred. For instance, in a proposition like, 'He is dark, because he is a son of Mitrā,' the fact of being a son of Mitrā is present where darkness is not, because in some son of Mitrā the state of being due to eating spinach is absent. But the state of being other than a subject (paksetaratva) that is not known to be associated with an incongruous reason,1 is not a vicious condition, because there is no evidence<sup>2</sup> to make known the fact of its being inclusive of the thing to be inferred, and also because it is self-destructive.3 The state of being other than a subject, however, that is known to be associated with an incongruous reason, is certainly a vicious condition. For instance, in a proposition like, 'Fire is not hot, because it is produced,' since fire is known to be hot through perception, the

<sup>1</sup> The thing to be inferred from which is not in the subject.

<sup>&</sup>lt;sup>2</sup> Because here the subject is not known to have the absence of the thing to be inferred, but it has not the difference from itself, which is the vicious condition.

<sup>&</sup>lt;sup>3</sup> Because it would also apply to cases where the reason is valid.

#### VERBAL TESTIMONY AND COMPARISON ALSO MEANS OF VALID KNOWLEDGE

शब्दोपमानयोनेंच पृथक्प्रामाण्यमिष्यते ॥ १४० ॥ अनुमानगतार्थत्वादिति चेशेषिकं मतम् । तम्र सम्यक्, विना व्याप्तिबोधं शाब्दादिबोधतः ॥ १४१

140 (contd.)-141. Verbal testimony and comparison are not recognised as separate means of valid knowledge, because their purpose is served by inference. This is the Vaisesika view. It is not correct; for verbal comprehension and the like take place (even) without the knowledge of invariable concomitance.

Verbal testimony, etc. According to the Vaisesikas, perception and inference are the means of valid knowledge, while verbal testimony and comparison are means of valid knowledge only as forms of inference. For example, secular words like, 'Drive the cow in with a stick,' or Vedic words like, '(One) should perform sacrifices,' are preceded by a valid knowledge of that connection among the recalled meanings of words, which is the subject-matter of the speaker's intention, because they are a group of words possessing expectancy etc., analogous to a group of words like, 'Bring the jar.' Or these meanings of words are connected with one another, because they are recalled by words possessing consistency etc., analogously to words of that kind. In examples also, the thing to be inferred is established by another example. Thus, after perceiving an individual gayal (gavaya), (one may infer that) the word gavaya is possessed of gavayahood, which is

142. Inference is of three kinds, including the purely affirmative form. Invariable concomitance is of two kinds according to its division into affirmation and negation.

### अन्वयव्याप्तिरुक्तेव, व्यतिरेकादिहोच्यते । साम्याभावव्यापकत्वं हेत्वभावस्य यद्भवेत् ॥ १४३ ॥

143. Affirmative invariable concomitance has already been spoken of; that due to negation is here being dealt with: It is the inclusion of the absence of the thing to be inferred, by the negation of the reason.

Inference, etc. Inference is of three kinds, according as it is purely affirmative, purely negative or both affirmative and negative. Of these, that which has no contrary instance (vipakṣa) is purely affirmative—as in a proposition like, 'A jar is namable, because it is knowable.' For there, since everything is namable, there is no contrary instance. That which has no similar instance (sapakṣa) is purely negative—as in a proposition like, 'Earth is different from other things, because it has smell.' For there, since the difference from the thirteen¹ entities beginning with water has not already been definitely known, a similar instance, or what definitely has the thing to be inferred, is wanting. That which has both similar and contrary instances is both affirmative and negative—as in a proposition like,

<sup>&</sup>lt;sup>1</sup> The eight substances other than earth, and the remaining five categories. The number should be fourteen, but non-existence is left out of account here, as there is no unanimity with regard to its being a category.

existence of smell we apprehend the inclusion of otherness (from something)<sup>1</sup> by the relation of selfsameness, there the absence of the non-existence of smell leads to the inference of the absolute non-existence of the otherness. Where, however, we apprehend that the absence of smell includes the other<sup>2</sup> things by the relation of identity, there we infer the absence of the other things by the relation of identity. This is mutual non-existence.<sup>3</sup> Thus, where the invariable concomitance of fire is apprehended, by the relation of conjunction, in smoke, which also bears the relation of conjunction (to its substratums), there that non-existence of fire, the counterpositiveness of which is characterised by the relation of conjunction, leads to the inference of that non-existence of smoke, the

<sup>&</sup>lt;sup>1</sup> For example: 'Water etc. have the absence of smell, because they have otherness from earth.'

<sup>&</sup>lt;sup>2</sup> As in the proposition, 'Water etc. have the absence of smell, because they have other things than earth by the relation of identity,' i. e. because they are identical with those other things.

<sup>&</sup>lt;sup>3</sup> Like the determinant of the counterpositiveness, the counterpositive also is considered to be the absence of mutual non-existence. The mutual non-existence that has the form, 'It is not a jar,' abides everywhere except in a jar. Hence its absence, i. e. absence of difference from a jar, abides only in a jar, as does jarhood. So it is the same as jarhood. Similarly as a jar abides in itself by the relation of identity, it is also regarded as the absence of mutual non-existence (of a jar) by that relation. Hence jarhood and a jar in respect of the relation of identity both constitute the absence of difference from a jar. In the case cited above, in the example, 'Earth is different from other things, because it has smell,' the absence of this difference may be considered to be just otherness or other things.

144. In this system presumption is not at all recognised as a separate means of valid knowledge, because its purpose is served by the knowledge of negative invariable concomitance.

In this, etc.—Some<sup>1</sup> hold that presumption is a separate means of valid knowledge. For instance, where it is known from Astrology that Devadatta is to live a hundred years, and it is observed through perception that the living man is not at home, there, it being impossible for the man who is to live a hundred years not to be at home unless he is outside, it is concluded that he is outside. This is not accepted, since its purpose is served by inference. For instance, where aliveness is known to be a concomitant of one or the other of two alternatives, viz. being outside and being at home, there one of the two must be held to be true; and existence at home being contradicted (by perception), existence outside is presented by inference. Similarly, in a proposition like, 'Stout Devadatta does not eat at daytime,' since stoutness is known to be a concomitant of eating, eating is proved; and since eating at daytime is contradicted, we conclude that he eats at night. Since the perception of non-existence is based on experience, non-perception also is not a separate means of knowledge.2 Moreover, if nonperception is a cause (of knowledge) without itself being known, then it comes under perception, since it is (knowledge) not due to another knowledge; while if it is a cause through itself being known, then it pre-

The followers of the Teacher (Prabhākara) hold that the notion of feasibility is the cause of inclination. To explain: In order to produce inclination, nothing further is necessary for knowledge than the desire to do, and that is caused by the notion of feasibility through one's effort; for it is a rule that desire is caused by a notion that has the same feature as itself. Now the desire to do is a wish of which feasibility through one's effort is a feature. In this, feasibility through one's effort is a feature, and a notion that has the same feature is the cause of the desire to do and, through that, of inclination. It is not that the notion of its conduciveness to what is desirable is the cause of inclination; for then there would be an inclination for such acts as bringing down the lunar orb, which is beyond one's power to do.

Objection (by the logician): The notion that it

is beyond one's power to do is an obstacle.

Reply (by the Mimāmsaka): Not so; for it is simpler to conceive that the notion of feasibility through one's effort is the cause, rather than the absence of the obstacle. It cannot be urged that both together are the cause, since it would be cumbrous.

Objection (by the logician): According to you also, there would be an inclination for eating a food with which honey and poison are mixed, and for saluting a road-side tree<sup>2</sup> (caitya); for there also is the notion of their feasibility.

<sup>&</sup>lt;sup>1</sup> For the alternative cause would be: the notion of conduciveness to what is desirable, as qualified by the absence of the notion of its unfeasibility.

<sup>&</sup>lt;sup>2</sup> That is not consecrated. Caitya may also mean 'a sepulchre of Buddhist saints.'

5:2

ing more pain than what intervenes before the appearance of the desired thing, or not producing that pain which is the object of strong aversion.

Reply (by the Mīmāmsaka): Not so; for conduciveness to what is desirable and feasibility through one's effort cannot be apprehended together, since being an attainable end and being the means are contradictory. Only that which has not been accomplished is attainable, and only what is already accomplished can be the means (to what is desirable). A thing cannot be known by the same person to be both accomplished and unaccomplished at the same time. Therefore the two are apprehended at different times.

Objection (by the logician): Not so; since for the sake of simplicity the cause (of inclination) is the notion of feasibility through one's effort, combined with that of being a means to what is desirable, without producing highly undesirable consequences. And there is no contradiction between the same thing being an end and a means; for there can be no contradiction in its being an end or a means at different times, and we can simultaneously have the *notion* of a thing being an end and a means. The new school (of Mīmāmsakas), however, maintains that the notion, 'This is feasible through my effort,' is not a cause of inclination, since such knowledge is impossible with regard to something that is yet to come.<sup>2</sup> But when a man

<sup>&</sup>lt;sup>1</sup> Such as the trouble of lighting a fire and getting together the accessories of cooking.

to the notion of their conduciveness to what is desirable.

Effort (kṛti) again (in the above paragraphs) is to be understood as inclination. Hence there is no inclination for the movements of the five vital forces, which are due to the effort (yatna) that sustains life. Thus for the sake of their being the cause of inclination, injunctions also mean only conduciveness to what is desirable, and so on. Hence also, in passages like, 'One should perform the Viśvajit sacrifice,' even where no result is mentioned by the Srutis, heaven is assumed to be that result.

Objection: In passages like, 'One should daily perform the sandhyā ceremony,' since no desirable result is produced, how can there be inclination? It cannot be urged that the result in question is either the world of Brahman etc. mentioned in the eulogistic passages, or the absence of any demerit<sup>2</sup>; for in that case it would be an optional activity for self-satisfaction, which would mar its character as a regular obligatory rite; while in the absence of desire nobody would care to do it. Thus, where there is mention of results in the Srutis, it is mere eulogy.

Reply: Not so; for as in the case of reverential offerings to the departed ancestors during an eclipse, for instance, there is no contradiction between their characters as regular (nitya) and occasional (naimittika) obligatory rites, so there is none between the charac-

<sup>1</sup> That is, not the other two divisions of effort.

<sup>&</sup>lt;sup>2</sup> Arising from its omission.

Thus, 'But those who, being keen on their vows, ever perform the sandhyā ceremony, are freed from their sins and go to the peaceful world of Brahman,' and, 'With a view to causing satisfaction to the departed ancestors . . . one should daily make reverential offerings to them' (Manu-Smṛti III. 82)-let such things alone be the result. It cannot be questioned how the satisfaction of the ancestors can be the result, since it is not co-existent (with the act)2; for as in the case of the reverential offerings to the ancestors made at Gaya, etc., sometimes an action is conceived to produce results that relate only to the person for whom it is intended. Hence it is stated, 'The results mentioned in the scriptures accrue to the doer of the action-this is the general rule.'3 If, however, the ancestors are already liberated,4 then the performer himself attains heaven as the result; for all regular and occasional obligatory rites have the general result of leading to heaven.

Again, inclination (to act even) for the sake of a barren extraordinary result is not possible; for the latter is neither itself an end of human life, like pleasure or the absence of pain, nor a means to it. Should it be asked how, in order to ward off demerit, there can be inclination, the answer is, in the following manner: Just as when regular obligatory rites are done, the (previous) non-existence of demerit continues, and in

<sup>&</sup>lt;sup>1</sup> The eulogistic passages are being illustrated.

<sup>&</sup>lt;sup>2</sup> The act abides in the son, and the satisfaction in the ancestors.

their ablence it ceases, similarly, so long as the firevious) non-existence of demerit lasts, the previous non-existence of pain also continues, and in the absence of the ferner it also ceases. Thus with regard to the tevious nen-existence of pain also, (the previous non-existence of demerit) may well be said to possess a technique of demerit) may well be said to possess a technique of demerit) may well be said to possess a technique of demerity may also ground of production and the childrance (of thates also possess the causality regarding the continuity of) the previous non-existence of pain.

to what is desirable nor that of feasibility through one's effort?

Reply: Not so. There, owing to contradiction,<sup>1</sup> the meaning of the injunction is not conduciveness (of the act) to what is desirable, or its feasibility through one's effort, but only not being attended with highly undesirable consequences,<sup>2</sup> and the negative particle indicates the absence of that. Or the meaning of the injunction is feasibility through one's effort, along with conduciveness to what is desirable, that is not attended with highly undesirable consequences. And the negation of that, conveyed by the negative particle, is the negation of a qualified entity, which, applied to a case where the thing specified<sup>3</sup> is present, is reduced<sup>4</sup> to a negation of the qualification.<sup>5</sup>

Objection: In passages like, 'Wishing to kill an enemy, one should perform the *Syena* sacrifice,' how can the meaning be 'not being attended with highly undesirable consequences'? For the *Syena* sacrifice, being an activity contributing to death, is doing injury

<sup>&</sup>lt;sup>1</sup> Since eating this flesh is both agreeable and feasible.

<sup>&</sup>lt;sup>2</sup> Viz. suffering from hell as a result of the sin incurred by eating the forbidden meat.

<sup>&</sup>lt;sup>3</sup> Viz. eating that kind of meat with which are associated conduciveness to what is desirable and the rest.

<sup>&</sup>lt;sup>4</sup> The negation of something that is qualified virtually signifies the absence of the thing specified when the specification is present, that of the specification when the thing specified is present, and that of both when both are wanting. Here it is the second alternative.

<sup>&</sup>lt;sup>5</sup> That is, absence of being attended with highly undesirable consequences.

the the transfer of the principle of the transfer of the trans the contraction of the contracti

although the Syena sacrifice, being enjoined by the scriptures, does not lead to sin, good people have no inclination for it, anticipating the subsequent sin. But in the opinion of the Ācārya (Udayana), the meaning of an injunction is the intention of a trustworthy person (āpta).1 Just as sentences like, 'You should cook,' convey desire in the form of an order, etc., similarly every vidhilin suffix signifies desire; for this is simpler. Thus in sentences like, 'One who desires heaven must perform sacrifices' (Tāndya Br. XVI. iii. 3, etc.), the meaning is that sacrifices are desired by a trustworthy person as being feasible through the effort of one who desires heaven. Therefore a man infers from the fact of an action being desired by a trustworthy person, that it is a means to what is desirable, and so on, and feels inclined to it. Since that is wanting with regard to eating the meat of an animal killed with a poisoned weapon, he has no inclination for it. To one who does not admit that the Vedas are not the work of a person, the injunctions alone arelike conception in the case of a maiden—a proof of the Sruti's connection with a person.2 The fact that no author of the Vedas is recalled, is no bar (to their springing from a person); for to this day we find rather a mention of their author by Kapila, Kaṇāda and others. Otherwise even the Smrtis would be regarded as being without any authors. Should it be urged that therein is a mention of their authors, the answer is that in the Vedas too there is indeed a mention of their

<sup>1</sup> God or a sage.

<sup>&</sup>lt;sup>2</sup> An injunction is the intention of a trustworthy person. The Vedic injunctions cannot obviously be the intention of persons like ourselves; hence they must be attributed to God.

The effort, etc.—The effort that susfains life continues throughout life, and it is beyond the senses. A proof of this is being stated: It is described, etc. The movement of the vital force, in the form of quickened respiration, for instance, is brought about by effort. Thus the inference that all movements of the vital force are due to effort, coupled with the fact that visible effort is contradicted (by experience), establishes the existence of imperceptible effort. That is the effort that sustains life.

WEIGHT, LIQUIDITY AND OILINESS

अतीन्द्रियं गुरुत्वं स्यात्, पृथिव्यादिद्वये तु तत्। अनित्ये तदनित्यं स्यात्, नित्ये नित्यमुदाहृतम्॥ १५३॥

153. Weight is imperceptible to the senses. It abides in the two substances beginning with earth. It is transitory in transitory things, and is spoken of as eternal in eternal things.

Weight is being described: Weight, etc. It is said, etc.—It, i. e. weight, is transitory in transitory things, beginning with dyads. Eternal in eternal things, i. e. in atoms. The word 'weight' is to be supplied from above.

#### तदेवासमवायि स्यात्पतनाख्ये तु कर्मणि । सांसिद्धिकं द्रवत्वं स्यात्, नैमित्तिक्रमथापरम् ॥ १५४ ॥

154. In the action called falling, it is that which is the non-inherent (cause). Liquidity is natural as also artificial.

ity is produced by the conjunction of fire, and it occurs in fire in the form of gold etc. and in (varieties of) earth such as clarified butter and lac. This is the meaning (of artificiality). Liquidity, etc. Cause—i. e. non-inherent cause. Formation of a lump—a particular kind of conjunction of fried powdered barley etc. It—liquidity, which should be understood as being mixed with oiliness. Hence there can be no formation of a lump with molten gold etc.

#### स्रोहो जले; स निल्योऽणौ, अनिल्योऽवयविन्यसौ। तैलान्तरे तत्प्रकर्षाहहनस्यानुकूलता ॥ १४७॥

157. Oiliness exists in water. It is eternal in an atom, and it is transitory in an aggregate. Because of its abundance in oil, the latter helps combustion.

Oiliness is being described: Oiliness, etc. In water—i. e. in water alone. It (in 'It is transitory') refers to oiliness. It may be contended that even in a modification of earth, viz. oil, oiliness is perceived, and it is not a property of water, since in that case it would thwart combustion. This is being answered: Because of, etc. Its abundance—the abundance of oiliness. Even the oiliness that is perceived in oil indeed belongs to water.¹ That it helps combustion is on account of its abundance. For it is only owing to its minute quantity of oiliness that water extinguishes fire. This is the idea.

<sup>1</sup> To the element of water that is in oil.

159. The tendency called elasticity abides in earth. Some (consider it to be present) in all the four (substances). It should be regarded as beyond the senses. Sometimes it is the cause of movement also.

The tendency, etc.—Because the return (to their former position) of branches etc. that have been pulled and let go, is caused by elasticity. Some, etc.—Some consider elasticity to be present in the four (substances), beginning with earth. The idea is that the view is incorrect. It (in 'It should be,' etc.) refers to elasticity. Sometimes—as for instance in the case of a branch that has been pulled.

## भावनाख्यस्तु संस्कारो जीववृत्तिरतीन्द्रियः। उपेक्षानात्मकस्तस्य निश्चयः कारणं भवेत्॥ १६०॥

160. The tendency called impression  $(bh\bar{a}-van\bar{a})$  abides in the soul and is imperceptible to the senses. Certitude that is not of the nature of indifference is its cause.

The tendency, etc. Its—of the tendency. Since knowledge of the nature of indifference does not give rise to any tendency, the text says: That is not of the nature of indifference. Since doubt that is not of the nature of indifference cannot produce any tendency, the word 'certitude' is used. So it comes to this that certitude other than indifference, as such, is the cause of tendency.

Objection: Certitude other than indifference, as such, is the cause of recollection; hence in a case of

urged that since the respective tendencies are the cause of recognition, the latter, being produced by tendency, is reduced to recollection; for there is no corroborative argument. Others, however, say that since unawakened tendency does not lead to recognition, instead of assuming awakened tendency to be the cause, it is better to assume that the respective recollections are the cause of recognition.

#### MERIT AND DEMERIT

## धर्माधर्मावद्वष्टं स्यात्; धर्मः स्वर्गादिसाधनम् ॥ १६१ ॥

161 (contd.). The unseen result is merit and demerit. Merit is what leads to heaven etc.

The unseen result is being described: The unseen result, etc. Heaven etc.—That is to say, merit is the means of attaining all enjoyable things such as heaven, and the bodies etc. that lead to (the enjoyment of) heaven.

## गङ्गास्नानादियागादिव्यापारः स तु कीर्तितः । कर्मनाशाजलस्पर्शादिना नाश्यस्त्वसौ मतः ॥ १६२ ॥

162. It is said to be the operation (vyāpāra) of such acts as a bath in the Ganges and sacrifices. It is considered to be destroyed by the touch of the water of the Karmanāśā, and so on.

To furnish a proof of that, the text says: The operation, etc. Merit is inferred as the operation of

<sup>&</sup>lt;sup>1</sup> While, as a matter of fact, it is perception, and not recollection.

<sup>&</sup>lt;sup>2</sup> Gangesa Upadhyāya, the author of the Tattva-cintāmaņi.

is not a superfluity.1 Immediate antecedence is (a condition) of the causality of the conjunction of the eye (and the object), and so on, but not everywhere,2 just as presence at the time when the effect takes place is (a condition) of the causality of an inherent cause.3 This is being answered: It is considered, etc. If indeed there were no extraordinary result, then merit would not be subject to destruction by the touch of the water of the Karmanāśā, and so on; for the touch and so forth can neither destroy nor obstruct the sacrifices etc., these being already accomplished facts. This is the idea. This also refutes the view that the satisfaction of the gods is the only result.4 Besides, the satisfaction of the gods is not always possible through acts like a bath in the Ganges, and although the gods are sentient beings, their satisfaction is not the end in view. Moreover, satisfaction, being a form of pleasure, is impossible in the case of Visnu, for instance, since no pleasure that is caused exists in Him. Hence the term 'the satisfaction of Visnu' means only heaven etc., contemplated by the opponents,5 which are due to the satisfaction of Visnu.

## अधर्मो नरकादीनां हेतुर्निन्दितकर्मजः। प्रायश्चित्तादिनाश्योऽसौ; जीववृत्ती त्विमौ गुणौ॥ १६३॥

Which is the definition of a cause.

<sup>&</sup>lt;sup>2</sup> So admitting heaven etc. to be the result of sacrifices and so forth, there is no need to assume any operation, such as destruction or the extraordinary result, to ensure that the cause is immediately antecedent to the effect.

<sup>3</sup> But not of a non-inherent cause.

<sup>4</sup> Of such acts as a bath in the Ganges and sacrifices.

<sup>5</sup> The Mimamsakas.

destroyed by experience through multiple bodies assumed by them.

Reply: Not so; for there experience is but suggestive of all means of destruction inculcated by the scriptures. How otherwise can actions be destroyed by expiation etc.? This has been stated in the passage, 'The fire of knowledge (reduces to ashes) all actions,' etc. (Gitā IV. 38). Also, 'His actions are destroyed when He who is both high and low is realised' (Mund. Up. II. ii. 8).

Objection: Then, for a man of realisation, there can be neither continuation of the body nor pleasure and pain, since all his actions are destroyed by knowledge.

Reply: Not so; for the destruction is only of actions other than the *prārabdha*. And *prārabdha*<sup>1</sup> is that action which leads to the enjoyments and sufferings in the present body. The dictum, 'Actions are never,' etc. refers to that.

#### SOUND

## शब्दो ध्वनिश्च वर्णश्च; मृदङ्गादिभवो ध्वनिः॥ १६४॥

164 (contd.). Sound is inarticulate and articulate. Inarticulate sound is that which is produced from a drum etc.

## कण्ठसंयोगादिजन्या वर्णास्ते काद्यो मताः। सर्वः शब्दो नभोवृत्तिः, श्रोत्रोत्पन्नस्त गृह्यते ॥ १६४ ॥

165. Sounds such as ka that are produced by the conjunction of the throat, and so on, are

<sup>1</sup> Lit. what has already begun to bear fruit.

tion, 'This is that ka,' it apprehends its belonging to the same class.

It may be urged that since sound is eternal, it is improper to speak of its origination. This is being answered: Sound is, etc. That is to say, sound is transitory, because it is related to our notion about its origin and destruction. It may be urged that sound is eternal, since we recognise that this is the same ka, and so on; so our notion about the origin and destruction of sound is but an error. This is being answered: Belonging to the same class: There the object of the recognition is the fact of (the sound ka) belonging to the same class as the first, and not that of its identity with the first individual; for that would contradict the above notion. Thus both the notions are correct.

## तदेवौपधमित्यादौ सजातीयेऽपि दर्शनात्। तस्मादनित्या पवेति वर्णाः सर्वे मतं हि नः॥ १६८॥

168. Because it<sup>2</sup> is noticeable even among things of the same class, as for instance in the notion, '(This is) that medicine.' Therefore we maintain that all articulate sounds are indeed transitory.

It may be asked: Where is the recognition, 'This is that,' noticeable among things of the same class? This is being answered: Because it is, etc. That is to say, because we notice (expressions like), 'The very medicine that I made was made by another also.'

<sup>&</sup>lt;sup>1</sup> The notion of origination and the recognition.

# CLOSSARY

apramā: invalid knowledge, error

abhighāta: impact

arthāpatti: presumption alaukika: supernormal

avacchedaka: determinant, the distinguishing charac-

teristic

avacchinna: determined

avayava: part

avayavin: aggregate, whole

avyāpti: too narrow application avyāpya-vṛtti: of partial extensity

asamavāyin: non-inherent

asādhāraṇa: uncommon (a kind of fallacy) asiddha: unfounded (a kind of fallacy)

ākāmksā: expectancy

ākāśa: ether

āpta: a trustworthy person

ārambhaka: productive

ālaya-vijñāna: ego-consciousness

āśraya: substratum āsatti: contiguity ista: desirable

ișțăpatti: welcome objection

udbhūta: manifested

upanīta-bhāna: spontaneous presentation upamāna: comparison (the instrument) upamiti: knowledge based on comparison

upasthiti: knowledge

upādāna: material or inherent cause

upādhi: (1) a general property other than the generic attribute (jāti); (2) a limiting adjunct; (3) a vicious

condition

naimittika: artificial

nodana: soundless contact

paksa: subject, that in which something is inferred,

the thing denoted by the minor term paksatā: the condition constituting a subject

pakṣata. the condition constituting a subpakṣa-dharmatā: presence in the subject

pada: word

padartha: (1) category; (2) the thing denoted by a

word

paratva: distance in time or place

paramāņu: atom

paramparā-sambandha: indirect relation

paramarsa: consideration, the knowledge that a concomitant of the thing to be inferred is in the subject

parvāpti: collective extensity

pāka: change under heat

pārimāndalya: atomicity, dimension of an atom

pāriśesya: the principle of residuum

purusa: soul

prakarana: context

prakāra: feature, the adjectival part of an object of

knowledge

prakrti: Nature, the material cause of the universe

pradhvamsābhāva: non-existence pertaining to destruc-

tion

pracaya: accumulation, loose conjunction

pratiyogin: (1) counterpositive, that which is negated;

(2) that which rests on something else (anuyogin)

pratyaksa: perception (the instrument as well as the knowledge)

pratyabhijñā: recognition

pratyaya: notion

praritti inclination, volition primity: Imonable, object of valid knowledge pramöna: instrument of valid knowledge ham; and knowledge 455[do trafegeatti; connection between a sense-organ and its
